

## **Aux Variant Code Charts for Kurinto Fonts**

### **Kurinto\_CodeChart\_Aux.pdf**

This document provides code charts for the Aux variant of Kurinto fonts. It is provided as part of a release package of the Kurinto Font Folio, available at <https://www.Kurinto.com/>.

Only code points within the three "Private Use Areas" (PUAs) are shown. Refer to the Unicode code charts for blocks of code points that are part of the Unicode Standard.

Note that two blocks of characters - Verdurian and aUI - are contained in the separate document Kurinto\_CodeChart\_Aux2.pdf document for technical reasons.

### **Consolidated Contact Information**

The authorship of proposals in this document by Michael Everson are generally listed in the source documents as : "Michael Everson <<mailto:everson@evertype.com>>, Everytype <<http://www.evertype.com/>>, Cnoc na Sceiche, Leac an Anfa, Cathair na Mart, Co. Mhaigh Eo, Éire".

**Range: E000–E07F**

The Tengwar script was invented by the philologist and author J. R. R. Tolkien as part of the mythological world he created, and was widely popularized through his work, *The Lord of the Rings*, *The Silmarillion*, etc.

This information is drawn from:

- The draft Unicode proposal for Tengwar by Michael Everson, dated 2001-03-07, retrieved from <http://www.evertype.com/standards/iso10646/pdf/tengwar.pdf> on 2020-06-29,
- The Under-ConScript Unicode Registry entry for this block at <https://www.kreativekorp.com/ucsur/>, as last updated 2008-04-14, and
- The *tengwar-2001.txt* NamesList file by Rebecca G. Bettencourt, retrieved on 2020-06-12 from <https://github.com/kreativekorp/charset>.

This script is rendered in Kurinto Text Aux. The glyphs were sourced from Constructium v1.13 (last updated 2019-12-08) by Rebecca G. Bettencourt.

**Range: E150–E1AF**

The Kinya scripts were invented by Maurizio M. Gavoli. There are three different Kinya scripts, encoded here in a single block:

- The *galme xornaf* 'syllabic writing', the modern standard, a Hangul-style system with conjoining letters that form syllabic clumps;
- The *tolle xornaf* 'consonantic writing', now mostly disused, a consonantal alphabet with vowel signs; and
- The *sopne xornaf* 'ancient writing', now entirely obsolete except in a few fixed inscriptions, a non-vocalic alphabet.

The *galme xornaf* characters are identified simply as KINYA LETTER; the *tolle xornaf* as KINYA LETTER TOLLE, and the *sopne xornaf* as KINYA LETTER SOTHNE. Only the conjoining forms of the *galme xornaf* are encoded in the ConScript Basic Multilingual Plane; the syllables themselves are encoded on the separate Kinya Syllables block.

The letters IE, OE, and UE represent a back I, a front O, and a front U respectively; these representations are introduced in according with the naming guidelines.

KINYA LETTER M (U+E162) has distinct syllable-initial and syllable-final forms; the two forms are considered rendering variants and are not encoded separately.

Kinya has a regular SPACE, which is a centered dot, and an ALTERNATE SPACE, used when the vowel of the preceding syllable or consonant actually belongs to the following word.

**Range: E290–E2BF**

*Amman-Iar script is a language devised by David Bell. It was also used to write an ancestral language named Vulayanal. Further information can be found at [http://graywizard.conlang.org/amman\\_iar.htm](http://graywizard.conlang.org/amman_iar.htm).*

*There are both vowel letters and vowel signs given; these are not used in the same texts, but are kept distinct because the vowel signs are combining characters and the vowel letters are not. The direction of use is left-to-right.*

*Certain gaps have been left for hypothetical letters that do not exist in Amman-Iar, in case these letters someday appear in other uses of the basic script.*

*This information is drawn from:*

- The ConScript Unicode Registry entry at <http://www.evertype.com/standards/csur/amman-iar.html>, originally proposed 1996-09-15 and last updated 1997-01-21 by Michael Everson, retrieved 2020-06-29,
- The Under-ConScript Unicode Registry entry for this block at <https://www.kreativekorp.com/ucsur/>, as last updated 2008-04-14, and

*Olaetyan is one of the scripts created by Herman Miller (hmiller@io.com). Miller is a prolific creator of constructed languages spoken by (imaginary) alien races as well as by humans. The languages have many scripts; further information can found at Miller's web site, <http://www.io.com/~hmiller/>. Languages using the Olaetyan script: Olaetyan, Randa, Espyryan, Azzyan, Lesk, Nimoryikh.*

*Note: The distinction between ligatures and individual letters in the Olaetyan script is not very well defined. Some letters, such as AO, were originally ligatures. Some ligatures, such as KA+SSE, contrast with the same letters used separately (akykh 'inevitable' is spelled A, KA+SSE, YA, KHO; akçimý 'to hold' is spelled A, KA, SSE, I, ME, YA+SED). Other ligatures, such as NI+GA, are produced automatically whenever the two letters (NI and GA) come together.*

*This information is drawn from:*

*Gargoyle is one of the scripts created by Herman Miller (hmiller@io.com). Miller is a prolific creator of constructed languages spoken by (imaginary) alien races as well as by humans. The languages have many scripts. One punctuation character used as a colon in Gargoyle, has been unified with U+2234. Languages using the Gargoyle script: Gargoyle (Gargish).*

*Gargoyle is used in the computer game Ultima 6. A grammar and vocabulary of Gargoyle is available at <http://www.uo.com/archive/gargoyle/>.*

The Seuss script is an extension of the Latin alphabet, proposed by Dr Seuss (Theodor Geisel) in his children's book *On Beyond Zebra* (New York: Random House, 1955; ISBN 0-394-80084-2). The letter names are those used in the List of Letters appearing in the back of the book, which lacks folios (page numbers), except for U+E643, which is not given a name, but is named for its constituent glyphs, as it appears to be a ligature.

This information is drawn from:

- The ConScript Unicode Registry entry at <http://www.evertype.com/standards/csur/seuss.html>, originally proposed 1997-01-21 and updated 2001-11-09 by Michael Everson, retrieved 2020-06-29,
- The Under-ConScript Unicode Registry entry for this block at <https://www.kreativekorp.com/ucsur/>, as last updated 2008-04-14, and
- UnicodeData.txt provided by Rebecca G. Bettencourt, retrieved on 2020-06-22 from <http://www.kreativekorp.com/charset/PUADATA/PUBLIC/UCSUREXT/>.

This script is rendered in Kurinto Text Aux. The glyphs were sourced from Constructium v1.13 (last updated 2019-12-08) by Rebecca G. Bettencourt.

**Range: E650–E67F**

*This script was originally titled "Sylabica" and proposed to the Under-Conscript Unicode Registry on 2007-09-05 and later revised 2013-02-09. The current glyph set in Kurinto is from a font by Rebecca G. Bettencourt.*

*This information is drawn from:*

- *The Under-ConScript Unicode Registry entry for this block at <https://www.kreativekorp.com/ucsur/>, as last updated 2012-12-04, and*
- *UnicodeData.txt provided by Rebecca G. Bettencourt, retrieved on 2020-06-22 from <http://www.kreativekorp.com/charset/PUADATA/PUBLIC/UCSUREXT/>.*

*This script is rendered in Kurinto Text Aux. The glyphs were sourced from Constructium v1.13 (last updated 2019-12-08) by Rebecca G. Bettencourt.*

*However, the name was subsequently changed to "Sylabitsa" as part of a more recent implementation by Marcin Kowalczyk, available at <https://sites.google.com/site/qrczakmk/sylabitsa> (retrieved 2020-06-29). This implementation is not under a glyph-compatible open-source license, so it cannot be incorporated into Kurinto. Therefore, please consider the implementation of this block in Kurinto as deprecated.*

**Range: E680–E6CF**

The Ewellic script (pronounced yoo-WELL-ik) was invented by Doug Ewell in 1980. It is a monospace, phonemic script, designed primarily to represent the general pronunciation of English and other languages without implying the phonetic precision of systems such as the International Phonetic Alphabet (IPA).

Ewellic was originally invented as a form of secret writing, but has also been used as a means of transcribing names and certain English words with particularly non-intuitive spellings. The script was originally intended for writing English, with additional letters to provide tentative support for Spanish. A group of 13 new letters was added in 2007, so that Ewellic can now be used to write French, German, Italian, Spanish, and Esperanto as well as English.

As a phonemic, rather than phonetic, script, Ewellic is intended to indicate the approximate, rather than precise, pronunciation of words. For example, there is no attempt to distinguish between the "pure" O of Italian and the diphthongal O of British English, or between the various R sounds of English, French, Spanish, and German. Spelling represents a general, idealized pronunciation of each word as it is understood by the writer; only phonemically relevant distinctions are represented by distinct letters.

Since spelling is based on pronunciation, words such as tomato and aunt that have alternative pronunciations will have more than one possible spelling. This is a characteristic of the alphabet, and does not imply an attempt to standardize pronunciation or accents.

*This block of Kurinto comprises both the Unifon and Unifon Extended blocks in the Under-ConScript Unicode Registry.*

*Unifon was invented in 1959 by John Malone, an economist from Chicago. It is intended to facilitate the learning of English in first-language and second-language classes, and to be used as a pronunciation key in English dictionaries. The letter names are the words chosen by Malone to indicate the sounds of the letters; thus UNIFON LETTER BOW represents the sound /b/.*

*The initial Unifon block at E740-E76F was proposed by Michael Everson on 1996-06-01 and revised on 1997-01-21.*

*The Unifon Extended block at U+E740-U+E76F was proposed by Rebecca Bettencourt on 2019-03-29. The proposal is available at <https://www.kreativekorp.com/ucsur/charts/unifon-ext.html>, retrieved 2020-06-29.*

*Unifon has been included in the ConScript Unicode Registry since 1996. The original proposal included 40 letters in only uppercase. Since then, fonts such as Everson Mono, Nishiki-teki, Constructium, and Fairfax have included an additional 19 uppercase letters and a set of lowercase letters. Unfortunately, each font currently uses its own encoding. The Unifon Extended proposal was to add these additional letters to the (U)CSUR in the range E6F0-E73F.*

*This information is drawn from:*

**Range: E770–E77F**

*This script is used to write Solresol, a constructed language unusual in that it has only seven syllables. The seven syllables can be represented in various ways:*

- as sung, whistled, or played musical notes;
- as Latin syllables standardly representing those notes;
- as the initials of those Latin syllables;
- as gestures;
- as colors;
- as glyphs.

*This information is drawn from:*

**Range: E770–E77F**

*Visible Speech is a phonetic alphabet invented by Alexander Melville Bell (you may have heard of his son, Alexander Graham Bell, who invented a fairly widely-used contraption). Bell was a teacher of the Deaf (as was the younger Bell, incidentally), and this alphabet was intended as an aid to teaching the Deaf how to pronounce words, by reducing sounds to a presumably unambiguous representation.*

*This information is drawn from:*

**Range: E890–E8DF**

*Visible Speech is a phonetic alphabet invented by Alexander Melville Bell (you may have heard of his son, Alexander Graham Bell, who invented a fairly widely-used contraption). Bell was a teacher of the Deaf (as was the younger Bell, incidentally), and this alphabet was intended as an aid to teaching the Deaf how to pronounce words, by reducing sounds to a presumably unambiguous representation.*

In 1859, John W. Nystrom proposed a hexadecimal (base 16) system of notation, arithmetic, and metrology called the Tonal System. In addition to new weights and measures, his proposal included a new calendar with sixteen months, a new system of coinage, and a hexadecimal clock with sixteen hours in a day. This first hexadecimal system, proposed in the 19th century, initially had no success at all. However, more recently base 16 has grown popular, and the Tonal system may become useful for academics and other enthusiasts.

The Glaitha-A script was created by Rebecca Bettencourt as part of her fictional Mika culture and the fictional city of Mika City. Glaitha-A was used a long time ago to write Mikiana, before English became more common; at that point the Roman alphabet was used to write Mikiana. "Glaitha" is the Mikiana word for "handwriting." Glaitha-A is used mainly to write Mikiana, but can be used to write any language written in the Roman alphabet. 8 columns are used to encode Glaitha-A.

This information is drawn from:

- The original proposal at <http://www.kreativekorp.com/mikiana/glaitha-a.html>, dated 2008-06-14, retrieved 2020-06-29,

**Range: E980–E9FF**

*The Glaitha-B Fairy Script was created by Rebecca Bettencourt as part of her fictional Mika culture and the fictional city of Mika City. Glaitha-B is used by fairies to write Mikiana. It can be seen on the grounds of the Mika City School for the Supernaturally Gifted, where fairies are known to live. "Glaitha" is the Mikiana word for "handwriting." Glaitha-B is used mainly to write Mikiana, but can be used to write any language with the same phonemes. 6 columns are used to encode Glaitha-B.*

*This information is drawn from:*

- *The original proposal at <http://www.kreativekorp.com/mikiana/glaitha-b.html>, dated 2019-03-29, retrieved 2020-06-29,*
- *The Under-ConScript Unicode Registry entry for this block at <https://www.kreativekorp.com/ucsur/charts/PDF/UE980.pdf>, as last updated 2012-12-04, and*
- *UnicodeData.txt provided by Rebecca G. Bettencourt, retrieved on 2020-06-22 from <http://www.kreativekorp.com/charset/PUADATA/PUBLIC/UCSUREXT/>.*

*This script is rendered in Kurinto Text Aux. The glyphs were sourced from Constructium v1.13 (last updated 2019-12-08) by Rebecca G. Bettencourt.*

The Standard Galactic Alphabet (SGA) is a writing system used throughout the Commander Keen series of side-scrolling platform video games developed by id Software. It is a simple substitution cypher, where each letter in the Latin alphabet has been substituted with a different symbol.

This information is drawn from:

- The proposal for this block at <https://www.kreativekorp.com/ucsur/charts/sga.html> by Rebecca Bettencourt on 2019-09-14, retrieved 2020-06-29, and

*This block provides a complete permutation of all Braille patterns as specified in the original 1829 Braille specification, but not otherwise encoded in the Braille Patterns Unicode block. Louis Braille had anticipated that bar patterns might be cumbersome, and defined the "number" ∴ Braille pattern dots-3456 as an alternate for specifying the barred braille patterns originally defined, a practice that was soon limited in practice to only distinguishing the numbers. Louis' prediction proved prophetic, and barred patterns were quickly removed from Braille specifications soon thereafter.*

**Range: EC00–EC2F**

*The Cylenian alphabet is used to write the Insular Cylenian language, a language that is one of the five major languages in the country Cylen. Insular Cylenian is the only tongue in the Cylenian language family that is still written in this script; others including Tragonian Cylenian are nowadays written in the Latin script. Cylen is situated in the Northern Atlantic Ocean on an alternative earth in the Atlantis project, an online forum for interactive geofiction.*

*The script derives from the Syrrin script, that according to ancient history was invented around 100 BCE. Around 1650 a standardized and optimized version of the Syrrin script was used in printing press, which developed into the current Cylenian script.*

*The Syrrin script was used to write several Cylenian languages, such as Old Cylenian and Carthiskian, that originated in the western part of the continent Borealia. This continent is situated in the Northern Atlantic Ocean on an alternative earth in the Atlantis project, an online forum for interactive geofiction.*

*The script was invented approximately around 100 BCE as a replacement for the Carthiskian logographic script and it is still used in the present in religious contexts.*

This script is present in the Farifax HD font and in the UnicodeData.txt provided by Kreative Korp, but is not yet in the UCSUR.

This information is drawn from:

- UnicodeData.txt provided by Rebecca G. Bettencourt, retrieved on 2020-06-22 from <http://www.kreativekorp.com/charset/PUADATA/PUBLIC/UCSUREXT/>.

This script is rendered in Kurinto Text Aux. The glyphs were sourced from Fairfax HD Medium v2020.05 (last updated 2020-05-08) by Rebecca G. Bettencourt.

**Range: F700–F72F**

A limited set of Creative Commons symbols were added to Unicode 13.0. Those code points are noted in the cross references below. Some of these code points are also provided in the Icons block, which are also cross-referenced.

This script is rendered in Kurinto Text Aux. The glyphs were sourced from the Creative Commons v1.0 font retrieved from <https://cc-icons.github.io/license/> on 2020-05-28.

**Range: F0000–F0E6F**

This block provides all the  $21 * 8 * 22 = 3696$  possible syllables in the galme xornaf system of Kinya (the block at E150-E1AF). Each syllable contains a consonant from the range E150-E164, a vowel from the range E165-E16C, and an optional consonant from the range E150-E164. When initial, E164 (KINYA VOWEL CARRIER) is a placeholder with no phonetic value; when final it doubles the vowel, expressing phonetic length.

This information is drawn from:

- The ConScript Unicode Registry entry for this block at

<http://www.evertype.com/standards/csur/kinya.html#SYLLABLES>, retrieved 2020-06-29,

- The Under-ConScript Unicode Registry entry for this block at

<https://www.kreativekorp.com/ucsur/charts/PDF/UF0000.pdf>, as last updated 2008-04-14, and

- UnicodeData.txt provided by Rebecca G. Bettencourt, retrieved on 2020-06-22 from <http://www.kreativekorp.com/charset/PUADATA/PUBLIC/UCSUREXT/>.

This script is rendered in Kurinto Text Aux. The glyphs were sourced from Fairfax HD Medium v2020.05 (last updated 2020-05-08) by Rebecca G. Bettencourt.

*This block implements the symbols used to number the 54 chapters of 源 氏 物語 - The Tale of Genji, an 11th century work of Japanese literature considered by some to be the works's first novel. It was written by the noblewoman 紫 式 部 - Murasaki Shikibu, who describes the romantic life and customs of the aristocratic society of the time through a story line involving over 400 characters.*

*See [https://en.wikipedia.org/wiki/The\\_Tale\\_of\\_Genji](https://en.wikipedia.org/wiki/The_Tale_of_Genji) for more information.*

*This block represents all possible groupings of five elements (52) plus two alternate symbols to accomodate the 54 chapters of Murasaki's work. This block is compatible with the Nishiki-teki and Quivira fonts, shifted by +100000 (hexadecimal).*

**Range: 10F550–10F57F**

A set of marks used to annotate invisible characters contained within a stream of characters. These marks are often used by word processing applications when an option is enabled to "show formatting" or "reveal codes". These characters in this block take no horizontal width - they are typically overlaid over the preceeding characters to provide the annotation. Cross-references are provided to the code point that the character is designed to annotate.

This script is rendered in Kurinto Text Aux.

**Application Marks**

Common marks used by Word Processing applications to annotate standard text.

**Range: 10F700–10F7FF**

*Representations of all possible combinations of a seven-segment display with a following "dot" character. These are commonly used in LCD or LED displays to show digits or (very) rudimentary alphanumeric text.*

*The naming convention refers to the seven segments: the horizontal TOP, MIDdle, and BOTtom segment plus Upper-Left, Upper-Right, Lower-Left and Lower-Right. The DOT in the name identifies characters followed by a period.*

*These characters were sourced from FairfaxHD by Rebecca G. Bettencourt. The characters are rendered in Kurinto Text Aux.*

**Range: 10F800–10F8FF**

*This block completes the Unicode Control Pictures block (U+2400 - U+243F) for all code points that use an alternate, "dashed-box" representation in the code charts provided by the Unicode Consortium. These characters can be used in the Unibook application to produce code charts, and in general text when referring to code points that would be invisible or otherwise render in a non-recognizable way. Cross-references are provided to the code point that the character is designed to represent. This script is rendered in Kurinto Text Aux.*

**Control Characters**

|        |   |  |

→ 1DAAE

10F8C2  SYMBOL FOR SIGNWRITING ROTATION MODIFIER-16  
→ 1DAAF

## Other Characters

10F8C3  SYMBOL FOR BOX SPACE  
→ F010

## Error Markers

*Designed to be used in error situations.*

10F8D0  SYMBOL FOR UNPAIRED HIGH SURROGATE  
10F8D1  SYMBOL FOR UNPAIRED HIGH PRIVATE USE SURROGATE  
10F8D2  SYMBOL FOR UNPAIRED LOW SURROGATE

## Alternate Representations

*These symbols provide alternatives to those above.*

10F8E0  SYMBOL FOR BYTE ORDER MARK  
→ FEFF

10F8E1  SYMBOL FOR ZERO WIDTH NO-BREAKING SPACE ALTERNATE 1  
→ FEFF

10F8E2  SYMBOL FOR TIFINAGH CONSONANT JOINER ALTERNATE 1  
→ 2D7F 

## Code Chart Symbols

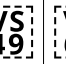

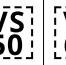

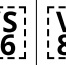

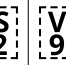

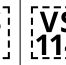

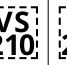

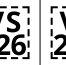

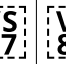

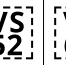

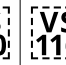

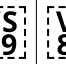

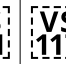

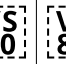

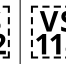

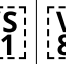

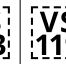

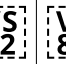

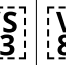

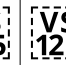

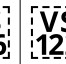

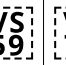

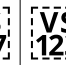

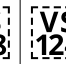

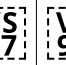

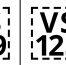

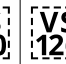

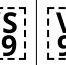

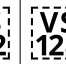

*Used in text to denote particular types of characters.*

10F8F0  SYMBOL FOR NOT A CHARACTER  
10F8F1  SYMBOL FOR RESERVED  
10F8F2  SYMBOL FOR BASE CHARACTER LARGE  
10F8F3  SYMBOL FOR BASE CHARACTER SMALL

## Components

*Can be used to form custom symbols.*

10F8F4  SYMBOL FOR THICK DASHED-BOX LARGE  
10F8F5  SYMBOL FOR THICK DASHED-BOX SMALL  
10F8F6  SYMBOL FOR BASE CHARACTER DASHED BOX SMALL  
10F8F7  SYMBOL FOR VIRAMA SMALL  
10F8F8  SYMBOL FOR THIN DASHED-BOX LARGE  
10F8F9  SYMBOL FOR THIN DASHED-BOX SMALL
