Packaging/L3 - Packaging

2017/08/09

Whats new

New cool stuff

- NOTHING
- NOTHING2
- It is a boring release

New boring stuff

- Main focus is stability
- Kernel release not updated, more HW enablement backported in
- Same Gnome release, still stable and used in SLED too
- New KDE release, still broken as always
- libreoffice 5.3 (but they are integrated in 43.2 too)

New less boring stuff

- Mesa 17.0
- GHC updated to cooler version (but I have no clue about haskell, they told me to put it here)
- Updated texlive
- Python singlespec macros are now supported

Bugzilla sprint

Sprint data

- Thursday 10.8. - Saturday 12.8.
- #opensuse-bughunting @ freenode.net
- opensuse-factory@opensuse.org
- <https://etherpad.opensuse.org/p/openSUSE-bughunting>

Cake!

Cake

Lets eat the cake, it seems it was not a lie!
