

Input file example

Drawj2d input files are UTF-8 encoded text files. Any editor does the job to write or modify these files. Consider using jEdit (www.jedit.org), it provides syntax highlighting for Drawj2d commands. The drawing units are mm, unless specified differently using the command `unitlength`. The program documentation covers all the commands available for Drawj2d and provides examples.

To preview the output of this file, run `"drawj2d -Tscreen example.hcl"`, to generate a pdf run `"drawj2d -Tpdf example.hcl"`.

Triangle

U: center of circumcircle

S: center of gravity
