    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.264.2.2 disconnect()

```
void LabsatSignalSource::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.264.2.3 get\_left\_block()

```
gr::basic_block_sptr LabsatSignalSource::get_left_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.264.2.4 get\_right\_block() [1/2]

```
gr::basic_block_sptr LabsatSignalSource::get_right_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

**10.264.2.5 get\_right\_block()** [2/2]

```
gr::basic_block_sptr LabsatSignalSource::get_right_block (
    int i) [override], [virtual]
```

Reimplemented from [GNSSBlockInterface](#).

**10.264.2.6 getRfChannels()**

```
size_t LabsatSignalSource::getRfChannels () const [override], [virtual]
```

Implements [SignalSourceInterface](#).

**10.264.2.7 item\_size()**

```
size_t LabsatSignalSource::item_size () [inline], [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.279.1 Detailed Description

This class contains parameters and outputs of the PVT block.

Definition at line 33 of file [monitor\\_pvt.h](#).

### 10.279.2 Member Function Documentation

#### 10.279.2.1 [serialize\(\)](#)

```
template<class Archive>
void Monitor_Pvt::serialize (
    Archive & ar,
    const unsigned int version) [inline]
```

This member function serializes and restores [Monitor\\_Pvt](#) objects from a byte stream.

Definition at line 109 of file [monitor\\_pvt.h](#).

### 10.279.3 Member Data Documentation

#### 10.279.3.1 [AR\\_ratio\\_factor](#)

```
float Monitor_Pvt::AR_ratio_factor
```

Definition at line 85 of file [monitor\\_pvt.h](#).

#### 10.279.3.2 [AR\\_ratio\\_threshold](#)

```
float Monitor_Pvt::AR_ratio_threshold
```

Definition at line 87 of file [monitor\\_pvt.h](#).

**10.279.3.3 cog**

```
double Monitor_Pvt::cog
```

Definition at line 73 of file [monitor\\_pvt.h](#).

**10.279.3.4 cov\_xx**

```
double Monitor_Pvt::cov_xx
```

Definition at line 54 of file [monitor\\_pvt.h](#).

**10.279.3.5 cov\_xy**

```
double Monitor_Pvt::cov_xy
```

Definition at line 57 of file [monitor\\_pvt.h](#).

**10.279.3.6 cov\_yy**

```
double Monitor_Pvt::cov_yy
```

Definition at line 55 of file [monitor\\_pvt.h](#).

**10.279.3.7 cov\_yz**

```
double Monitor_Pvt::cov_yz
```

Definition at line 58 of file [monitor\\_pvt.h](#).

**10.279.3.8 cov\_zx**

```
double Monitor_Pvt::cov_zx
```

Definition at line 59 of file [monitor\\_pvt.h](#).

**10.279.3.9 cov\_zz**

```
double Monitor_Pvt::cov_zz
```

Definition at line 56 of file [monitor\\_pvt.h](#).

**10.279.3.10 galhas\_status**

```
uint32_t Monitor_Pvt::galhas_status
```

Definition at line 76 of file [monitor\\_pvt.h](#).

**10.279.3.11 gdop**

```
double Monitor_Pvt::gdop
```

Definition at line 90 of file [monitor\\_pvt.h](#).

**10.279.3.12 geohash**

```
std::string Monitor_Pvt::geohash
```

Definition at line 101 of file [monitor\\_pvt.h](#).

**10.279.3.13 hdop**

```
double Monitor_Pvt::hdop
```

Definition at line 92 of file [monitor\\_pvt.h](#).

**10.279.3.14 height**

```
double Monitor_Pvt::height
```

Definition at line 66 of file [monitor\\_pvt.h](#).

**10.279.3.15 latitude**

double Monitor\_Pvt::latitude

Definition at line 62 of file [monitor\\_pvt.h](#).

**10.279.3.16 longitude**

double Monitor\_Pvt::longitude

Definition at line 64 of file [monitor\\_pvt.h](#).

**10.279.3.17 pdop**

double Monitor\_Pvt::pdop

Definition at line 91 of file [monitor\\_pvt.h](#).

**10.279.3.18 pos\_x**

double Monitor\_Pvt::pos\_x

Definition at line 46 of file [monitor\\_pvt.h](#).

**10.279.3.19 pos\_y**

double Monitor\_Pvt::pos\_y

Definition at line 47 of file [monitor\\_pvt.h](#).

**10.279.3.20 pos\_z**

double Monitor\_Pvt::pos\_z

Definition at line 48 of file [monitor\\_pvt.h](#).

**10.279.3.21 RX\_time**

double Monitor\_Pvt::RX\_time

Definition at line 41 of file [monitor\\_pvt.h](#).

**10.279.3.22 solution\_status**

uint8\_t Monitor\_Pvt::solution\_status

Definition at line 81 of file [monitor\\_pvt.h](#).

**10.279.3.23 solution\_type**

uint8\_t Monitor\_Pvt::solution\_type

Definition at line 83 of file [monitor\\_pvt.h](#).

**10.279.3.24 TOW\_at\_current\_symbol\_ms**

uint32\_t Monitor\_Pvt::TOW\_at\_current\_symbol\_ms

Definition at line 37 of file [monitor\\_pvt.h](#).

**10.279.3.25 user\_clk\_drift\_ppm**

double Monitor\_Pvt::user\_clk\_drift\_ppm

Definition at line 96 of file [monitor\\_pvt.h](#).

**10.279.3.26 user\_clk\_offset**

double Monitor\_Pvt::user\_clk\_offset

Definition at line 43 of file [monitor\\_pvt.h](#).

**10.279.3.27 utc\_time**

std::string Monitor\_Pvt::utc\_time  
Definition at line 99 of file [monitor\\_pvt.h](#).

**10.279.3.28 valid\_sats**

uint8\_t Monitor\_Pvt::valid\_sats  
Definition at line 79 of file [monitor\\_pvt.h](#).

**10.279.3.29 vdop**

double Monitor\_Pvt::vdop  
Definition at line 93 of file [monitor\\_pvt.h](#).

**10.279.3.30 vel\_e**

double Monitor\_Pvt::vel\_e  
Definition at line 68 of file [monitor\\_pvt.h](#).

**10.279.3.31 vel\_n**

double Monitor\_Pvt::vel\_n  
Definition at line 69 of file [monitor\\_pvt.h](#).

**10.279.3.32 vel\_u**

double Monitor\_Pvt::vel\_u  
Definition at line 70 of file [monitor\\_pvt.h](#).

**10.279.3.33 vel\_x**

double Monitor\_Pvt::vel\_x  
Definition at line 49 of file [monitor\\_pvt.h](#).

**10.279.3.34 vel\_y**

double Monitor\_Pvt::vel\_y  
Definition at line 50 of file [monitor\\_pvt.h](#).

**10.279.3.35 vel\_z**

double Monitor\_Pvt::vel\_z  
Definition at line 51 of file [monitor\\_pvt.h](#).

**10.279.3.36 week**

uint32\_t Monitor\_Pvt::week  
Definition at line 39 of file [monitor\\_pvt.h](#).

The documentation for this class was generated from the following file:

- [monitor\\_pvt.h](#)

## 10.280 Monitor\_Pvt\_Udp\_Sink Class Reference

Collaboration diagram for Monitor\_Pvt\_Udp\_Sink:

### Public Member Functions

- **Monitor\_Pvt\_Udp\_Sink** (const std::vector< std::string > &addresses, const std::vector< std::string > &ports, bool protobuf\_enabled)
- bool **write\_monitor\_pvt** (const [Monitor\\_Pvt](#) \*const monitor\_pvt)

### 10.280.1 Detailed Description

Definition at line 40 of file [monitor\\_pvt\\_udp\\_sink.h](#).

The documentation for this class was generated from the following file:

- [monitor\\_pvt\\_udp\\_sink.h](#)

## 10.281 msm\_h\_t Struct Reference

Collaboration diagram for msm\_h\_t:

msm_h_t
+ iod
+ time_s
+ clk_str
+ clk_ext
+ smooth
+ tint_s
+ nsat
+ nsig
+ sats
+ sigs
+ cellmask

### Public Attributes

- unsigned char [clk\\_str](#)
- unsigned char [clk\\_ext](#)
- unsigned char [smooth](#)
- unsigned char [tint\\_s](#)
- unsigned char [nsat](#)
- unsigned char [nsig](#)
- unsigned char [sats](#) [64]
- unsigned char [sigs](#) [32]
- unsigned char [cellmask](#) [64]

### 10.281.1 Detailed Description

Definition at line [1276](#) of file [rtklib.h](#).

### 10.281.2 Member Data Documentation

#### 10.281.2.1 cellmask

unsigned char msm\_h\_t::cellmask[64]

Definition at line [1287](#) of file [rtklib.h](#).

#### 10.281.2.2 clk\_ext

unsigned char msm\_h\_t::clk\_ext

Definition at line [1281](#) of file [rtklib.h](#).

### 10.281.2.3 clk\_str

unsigned char msm\_h\_t::clk\_str  
Definition at line 1280 of file [rtklib.h](#).

### 10.281.2.4 iod

unsigned char msm\_h\_t::iod  
Definition at line 1278 of file [rtklib.h](#).

### 10.281.2.5 nsat

unsigned char msm\_h\_t::nsat  
Definition at line 1284 of file [rtklib.h](#).

### 10.281.2.6 nsig

unsigned char msm\_h\_t::nsig  
Definition at line 1284 of file [rtklib.h](#).

### 10.281.2.7 sats

unsigned char msm\_h\_t::sats[64]  
Definition at line 1285 of file [rtklib.h](#).

### 10.281.2.8 sigs

unsigned char msm\_h\_t::sigs[32]  
Definition at line 1286 of file [rtklib.h](#).

### 10.281.2.9 smooth

unsigned char msm\_h\_t::smooth  
Definition at line 1282 of file [rtklib.h](#).

### 10.281.2.10 time\_s

unsigned char msm\_h\_t::time\_s  
Definition at line 1279 of file [rtklib.h](#).

### 10.281.2.11 tint\_s

unsigned char msm\_h\_t::tint\_s  
Definition at line 1283 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.282 mt1\_header Struct Reference

Collaboration diagram for mt1\_header:

mt1_header
<ul style="list-style-type: none"><li>+ toh</li><li>+ mask_id</li><li>+ iod_set_id</li><li>+ reserved</li><li>+ mask_flag</li><li>+ orbit_correction_flag</li><li>+ clock_fullset_flag</li><li>+ clock_subset_flag</li><li>+ code_bias_flag</li><li>+ phase_bias_flag</li></ul>

### Public Attributes

## 10.283.1 Detailed Description

Class that reads signals samples from files at different frequency bands and adapts it to a [SignalSourceInterface](#).  
Definition at line 49 of file [multichannel\\_file\\_signal\\_source.h](#).

## 10.283.2 Member Function Documentation

### 10.283.2.1 connect()

```
void MultichannelFileSignalSource::connect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.283.2.2 disconnect()

```
void MultichannelFileSignalSource::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.283.2.3 filename()

```
std::string MultichannelFileSignalSource::filename () const [inline]
```

Definition at line 68 of file [multichannel\\_file\\_signal\\_source.h](#).

### 10.283.2.4 get\_left\_block()

```
gr::basic_block_sptr MultichannelFileSignalSource::get_left_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

**10.283.2.5 get\_right\_block()**

`gr::basic_block_sptr MultichannelFileSignalSource::get_right_block () [override], [virtual]`  
 Implements [GNSSBlockInterface](#).

**10.283.2.6 item\_size()**

`size_t MultichannelFileSignalSource::item_size () [inline], [override], [virtual]`  
 Implements [GNSSBlockInterface](#).  
 Definition at line 58 of file [multichannel\\_file\\_signal\\_source.h](#).

**10.283.2.7 item\_type()**

`std::string MultichannelFileSignalSource::item_type () const [inline]`  
 Definition at line 73 of file [multichannel\\_file\\_signal\\_source.h](#).

**10.283.2.8 repeat()**

`bool MultichannelFileSignalSource::repeat () const [inline]`  
 Definition at line 78 of file [multichannel\\_file\\_signal\\_source.h](#).

**10.283.2.9 samples()**

`uint64_t MultichannelFileSignalSource::samples () const [inline]`  
 Definition at line 88 of file [multichannel\\_file\\_signal\\_source.h](#).

**10.283.2.10 sampling\_frequency()**

`int64_t MultichannelFileSignalSource::sampling_frequency () const [inline]`  
 Definition at line 83 of file [multichannel\\_file\\_signal\\_source.h](#).

The documentation for this class was generated from the following file:

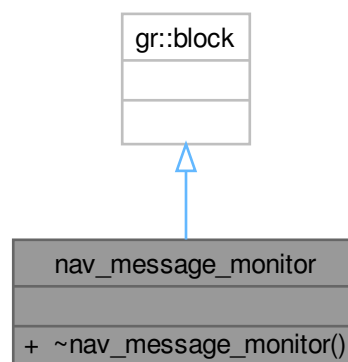

- [multichannel\\_file\\_signal\\_source.h](#)

**10.284 nav\_message\_monitor Class Reference**

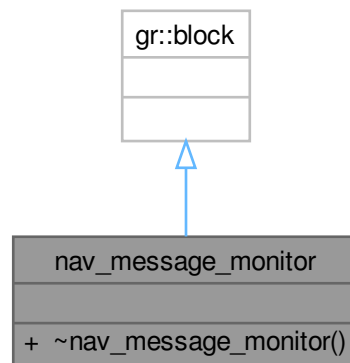

GNU Radio block that receives asynchronous [Nav\\_Message\\_Packet](#) objects from the telemetry blocks and sends them via UDP.

`#include <nav_message_monitor.h>`

Inheritance diagram for `nav_message_monitor`:

Collaboration diagram for nav\_message\_monitor:

### Public Member Functions

- `~nav_message_monitor()`=default  
*Default destructor.*

### Friends

- `nav_message_monitor_sptr nav_message_monitor_make` (const std::vector< std::string > &addresses, uint16\_t port)

## 10.284.1 Detailed Description

GNU Radio block that receives asynchronous [Nav\\_Message\\_Packet](#) objects from the telemetry blocks and sends them via UDP.

Definition at line 45 of file [nav\\_message\\_monitor.h](#).

## 10.284.2 Constructor & Destructor Documentation

### 10.284.2.1 ~nav\_message\_monitor()

```
nav_message_monitor::~nav_message_monitor () [default]
```

Default destructor.

The documentation for this class was generated from the following file:

- [nav\\_message\\_monitor.h](#)

**10.288 Nmea\_Printer Class Reference**

This class provides a implementation of a subset of the NMEA-0183 standard for interfacing marine electronic devices as defined by the National Marine Electronics Association (NMEA).

```
#include <nmea_printer.h>
```

Collaboration diagram for Nmea\_Printer:

**Public Member Functions**

- [Nmea\\_Printer](#) (const std::string &filename, bool flag\_nmea\_output\_file, bool flag\_nmea\_tty\_port, std::string nmea\_dump\_devname, const std::string &base\_path=".")  
*Default constructor.*
- [~Nmea\\_Printer](#) ()  
*Default destructor.*
- bool [Print\\_Nmea\\_Line](#) (const [Rtklib\\_Solver](#) \*const pvt\_data)  
*Print NMEA PVT and satellite info to the initialized device.*

### 10.288.1 Detailed Description

This class provides a implementation of a subset of the NMEA-0183 standard for interfacing marine electronic devices as defined by the National Marine Electronics Association (NMEA).

See [https://en.wikipedia.org/wiki/NMEA\\_0183](https://en.wikipedia.org/wiki/NMEA_0183)

Definition at line 44 of file [nmea\\_printer.h](#).

### 10.288.2 Constructor & Destructor Documentation

#### 10.288.2.1 Nmea\_Printer()

```
Nmea_Printer::Nmea_Printer (  
    const std::string & filename,  
    bool flag_nmea_output_file,  
    bool flag_nmea_tty_port,  
    std::string nmea_dump_devname,  
    const std::string & base_path = ".")
```

Default constructor.

#### 10.288.2.2 ~Nmea\_Printer()

```
Nmea_Printer::~Nmea_Printer ()
```

Default destructor.

### 10.288.3 Member Function Documentation

#### 10.288.3.1 Print\_Nmea\_Line()

```
bool Nmea_Printer::Print_Nmea_Line (  
    const Rtklib\_Solver *const pvt_data)
```

Print NMEA PVT and satellite info to the initialized device.

The documentation for this class was generated from the following file:

- [nmea\\_printer.h](#)

## 10.289 Notch Class Reference

This class implements a real-time software-defined multi state notch filter.

```
#include <notch_cc.h>
```

### 10.293.1 Detailed Description

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

Definition at line 41 of file [nsr\\_file\\_signal\\_source.h](#).

### 10.293.2 Member Function Documentation

#### 10.293.2.1 [create\\_file\\_source\\_hook\(\)](#)

void NsrFileSignalSource::create\_file\_source\_hook () [override], [protected], [virtual]  
Reimplemented from [FileSourceBase](#).

#### 10.293.2.2 [itemTypeToSize\(\)](#)

std::tuple< size\_t, bool > NsrFileSignalSource::itemTypeToSize () [override], [protected], [virtual]

Compute the item size, from the [item\\_type\(\)](#). Subclasses may constrain types that don't make.

Reimplemented from [FileSourceBase](#).

#### 10.293.2.3 [packetsPerSample\(\)](#)

double NsrFileSignalSource::packetsPerSample () const [override], [protected], [virtual]

The number of (possibly unpacked) samples in a (raw) file sample (default=1)

Reimplemented from [FileSourceBase](#).

#### 10.293.2.4 [pre\\_connect\\_hook\(\)](#)

void NsrFileSignalSource::pre\_connect\_hook (gr::top\_block\_sptr top\_block) [override], [protected], [virtual]

Reimplemented from [FileSourceBase](#).

### 10.293.2.5 pre\_disconnect\_hook()

```
void NsrFileSignalSource::pre_disconnect_hook (  
    gr::top_block_sptr top_block) [override], [protected], [virtual]
```

Reimplemented from [FileSourceBase](#).

### 10.293.2.6 source()

```
gnss_shared_ptr< gr::block > NsrFileSignalSource::source () const [override], [protected],  
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.

Reimplemented from [FileSourceBase](#).

The documentation for this class was generated from the following file:

- [nsr\\_file\\_signal\\_source.h](#)

## 10.294 ntrip\_t Struct Reference

- virtual gr::basic\_block\_sptr **get\_right\_block** (int RF\_channel)
- virtual void **start** ()

*Start the flow of samples if needed.*

#### 10.298.1 Detailed Description

This abstract class represents an interface to an observables block.

Abstract class for pseudorange\_interfaces, derived from [GNSSBlockInterface](#). Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.

Definition at line 43 of file [observables\\_interface.h](#).

The documentation for this class was generated from the following file:

- [observables\\_interface.h](#)

## 10.299 opt\_t Struct Reference

### 10.310 pcps\_acquisition Class Reference

This class implements a Parallel Code Phase Search Acquisition.

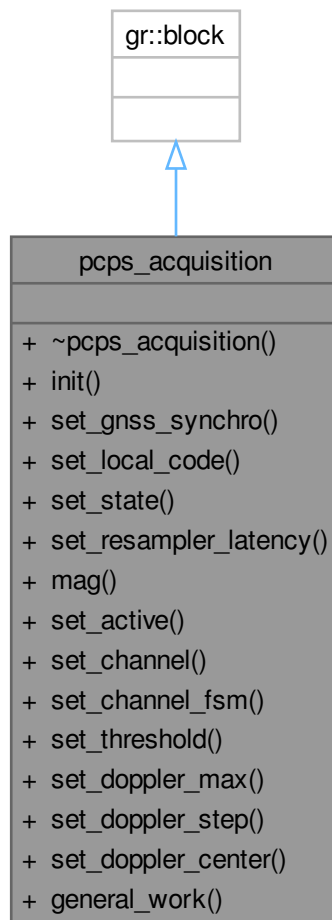

`#include <pcps_acquisition.h>`

Inheritance diagram for `pcps_acquisition`:

Collaboration diagram for pcps\_acquisition:

## Public Member Functions

- void `init` ()  
*Initializes acquisition algorithm and reserves memory.*
- void `set_gnss_synchro` (`Gnss_Synchro` \*p\_gnss\_synchro)  
*Set acquisition/tracking common `Gnss_Synchro` object pointer to exchange synchronization data between acquisition and tracking blocks.*
- void `set_local_code` (`std::complex< float >` \*code)  
*Sets local code for PCPS acquisition algorithm.*
- void `set_state` (`int32_t` state)  
*If set to 1, ensures that acquisition starts at the first available sample.*
- void `set_resampler_latency` (`uint32_t` latency\_samples)
- `uint32_t` `mag` () const  
*Returns the maximum peak of grid search.*
- void `set_active` (bool active)  
*Starts acquisition algorithm, turning from standby mode to active mode.*
- void `set_channel` (`uint32_t` channel)

- Set acquisition channel unique ID.*
- void [set\\_channel\\_fsm](#) (std::weak\_ptr< [ChannelFsm](#) > channel\_fsm)  
*Set channel fsm associated to this acquisition instance.*
- void [set\\_threshold](#) (float threshold)  
*Set statistics threshold of PCPS algorithm.*
- void [set\\_doppler\\_max](#) (uint32\_t doppler\_max)  
*Set maximum Doppler grid search.*
- void [set\\_doppler\\_step](#) (uint32\_t doppler\_step)  
*Set Doppler steps for the grid search.*
- void [set\\_doppler\\_center](#) (int32\_t doppler\_center)  
*Set Doppler center frequency for the grid search. It will refresh the Doppler grid.*
- int [general\\_work](#) (int noutput\_items, gr\_vector\_int &ninput\_items, gr\_vector\_const\_void\_star &input\_items, gr\_vector\_void\_star &output\_items) override  
*Parallel Code Phase Search Acquisition signal processing.*

## Friends

- pcps\_acquisition\_sptr [pcps\\_make\\_acquisition](#) (const [Acq\\_Conf](#) &conf\_)

## 10.310.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition.

Check [An Open Source Galileo E1 Software Receiver](#), Algorithm 1, for a pseudocode description of this implementation.

Definition at line 92 of file [pcps\\_acquisition.h](#).

## 10.310.2 Member Function Documentation

### 10.310.2.1 [general\\_work\(\)](#)

```
int pcps_acquisition::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items) [override]
```

Parallel Code Phase Search Acquisition signal processing.

### 10.310.2.2 [init\(\)](#)

```
void pcps_acquisition::init ()
```

Initializes acquisition algorithm and reserves memory.

### 10.310.2.3 [mag\(\)](#)

```
uint32_t pcps_acquisition::mag () const [inline]
```

Returns the maximum peak of grid search.

Definition at line 131 of file [pcps\\_acquisition.h](#).

### 10.310.2.4 [set\\_active\(\)](#)

```
void pcps_acquisition::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

## Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 141 of file [pcps\\_acquisition.h](#).

**10.310.2.5 set\_channel()**

```
void pcps_acquisition::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

**Parameters**

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 151 of file [pcps\\_acquisition.h](#).

**10.310.2.6 set\_channel\_fsm()**

```
void pcps_acquisition::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 159 of file [pcps\\_acquisition.h](#).

**10.310.2.7 set\_doppler\_center()**

```
void pcps_acquisition::set_doppler_center (
    int32_t doppler_center)
```

Set Doppler center frequency for the grid search. It will refresh the Doppler grid.

**Parameters**

<i>doppler_center</i>	- Frequency center of the search grid [Hz].
-----------------------	---

**10.310.2.8 set\_doppler\_max()**

```
void pcps_acquisition::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

**Parameters**

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 179 of file [pcps\\_acquisition.h](#).

**10.310.2.9 set\_doppler\_step()**

```
void pcps_acquisition::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

**Parameters**

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 189 of file [pcps\\_acquisition.h](#).

**10.310.2.10 set\_gnss\_synchro()**

```
void pcps_acquisition::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 107 of file [pcps\\_acquisition.h](#).

**10.310.2.11 set\_local\_code()**

```
void pcps_acquisition::set_local_code (
    std::complex< float > * code)
```

Sets local code for PCPS acquisition algorithm.

## Parameters

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.310.2.12 set\_state()**

```
void pcps_acquisition::set_state (
    int32_t state)
```

If set to 1, ensures that acquisition starts at the first available sample.

## Parameters

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.310.2.13 set\_threshold()**

```
void pcps_acquisition::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

## Parameters

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 169 of file [pcps\\_acquisition.h](#).

The documentation for this class was generated from the following file:

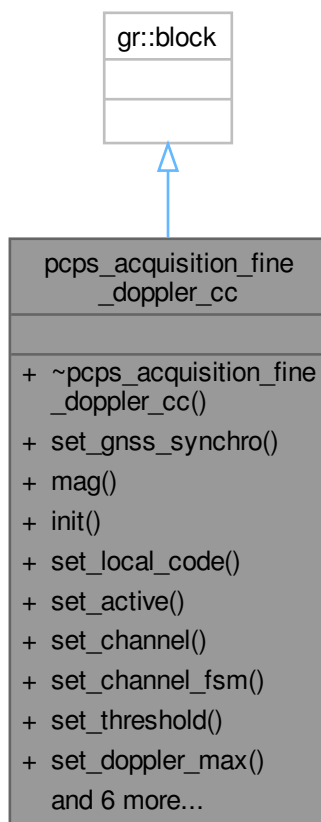

- [pcps\\_acquisition.h](#)

**10.311 pcps\_acquisition\_fine\_doppler\_cc Class Reference**

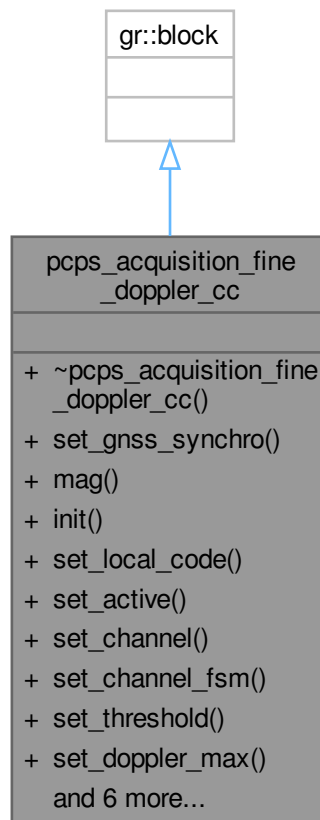

This class implements a Parallel Code Phase Search Acquisition.

```
#include <pcps_acquisition_fine_doppler_cc.h>
```

Inheritance diagram for pcps\_acquisition\_fine\_doppler\_cc:

Collaboration diagram for pcps\_acquisition\_fine\_doppler\_cc:

## Public Member Functions

- `~pcps_acquisition_fine_doppler_cc ()`=default  
*Default destructor.*

## 10.311.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition.

Definition at line 73 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

## 10.311.2 Constructor & Destructor Documentation

### 10.311.2.1 ~pcps\_acquisition\_fine\_doppler\_cc()

```
pcps_acquisition_fine_doppler_cc::~~pcps_acquisition_fine_doppler_cc () [default]
```

Default destructor.

## 10.311.3 Member Function Documentation

### 10.311.3.1 general\_work()

```
int pcps_acquisition_fine_doppler_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Parallel Code Phase Search Acquisition signal processing.

### 10.311.3.2 init()

```
void pcps_acquisition_fine_doppler_cc::init ()
```

Initializes acquisition algorithm.

### 10.311.3.3 mag()

```
unsigned int pcps_acquisition_fine_doppler_cc::mag () const [inline]
```

Returns the maximum peak of grid search.

Definition at line 94 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.4 nextPowerOf2()**

```
unsigned int pcps_acquisition_fine_doppler_cc::nextPowerOf2 (  
    unsigned int n)
```

Obtains the next power of 2 greater or equal to the input parameter.

## Parameters

<i>n</i>	- Integer value to obtain the next power of 2.
----------	--

**10.311.3.5 set\_active()**

```
void pcps_acquisition_fine_doppler_cc::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

## Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 115 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.6 set\_channel()**

```
void pcps_acquisition_fine_doppler_cc::set_channel (
    unsigned int channel) [inline]
```

Set acquisition channel unique ID.

## Parameters

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 124 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.7 set\_channel\_fsm()**

```
void pcps_acquisition_fine_doppler_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 133 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.8 set\_doppler\_max()**

```
void pcps_acquisition_fine_doppler_cc::set_doppler_max (
    unsigned int doppler_max) [inline]
```

Set maximum Doppler grid search.

## Parameters

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 152 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.9 set\_doppler\_step()**

```
void pcps_acquisition_fine_doppler_cc::set_doppler_step (
    unsigned int doppler_step)
```

Set Doppler steps for the grid search.

## Parameters

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

**10.311.3.10 set\_gnss\_synchro()**

```
void pcps_acquisition_fine_doppler_cc::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

**Parameters**

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 86 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

**10.311.3.11 set\_local\_code()**

```
void pcps_acquisition_fine_doppler_cc::set_local_code (
    std::complex< float > * code)
```

Sets local code for PCPS acquisition algorithm.

**Parameters**

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.311.3.12 set\_state()**

```
void pcps_acquisition_fine_doppler_cc::set_state (
    int state)
```

If set to 1, ensures that acquisition starts at the first available sample.

**Parameters**

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.311.3.13 set\_threshold()**

```
void pcps_acquisition_fine_doppler_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

**Parameters**

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 143 of file [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#).

The documentation for this class was generated from the following file:

- [pcps\\_acquisition\\_fine\\_doppler\\_cc.h](#)

**10.312 pcps\_acquisition\_fpga Class Reference**

This class implements a Parallel Code Phase Search Acquisition that uses the FPGA.

## 10.312.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition that uses the FPGA.

Check [An Open Source Galileo E1 Software Receiver](#), Algorithm 1, for a pseudocode description of this implementation.

Definition at line 58 of file `pcps_acquisition_fpga.h`.

## 10.312.2 Constructor & Destructor Documentation

### 10.312.2.1 ~pcps\_acquisition\_fpga()

```
pcps_acquisition_fpga::~pcps_acquisition_fpga () [default]
```

Destructor.

## 10.312.3 Member Function Documentation

### 10.312.3.1 init()

```
void pcps_acquisition_fpga::init ()
```

Initializes acquisition algorithm.

### 10.312.3.2 mag()

```
uint32_t pcps_acquisition_fpga::mag () const [inline]
```

Returns the maximum peak of grid search.  
Definition at line 79 of file `pcps_acquisition_fpga.h`.

### 10.312.3.3 reset\_acquisition()

```
void pcps_acquisition_fpga::reset_acquisition ()
```

This function triggers a HW reset of the FPGA PL.

### 10.312.3.4 set\_active()

```
void pcps_acquisition_fpga::set_active (
    bool active)
```

Starts acquisition algorithm, turning from standby mode to active mode.

## Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

**10.312.3.5 set\_channel()**

```
void pcps_acquisition_fpga::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

**Parameters**

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 112 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.6 set\_channel\_fsm()**

```
void pcps_acquisition_fpga::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 120 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.7 set\_doppler\_center()**

```
void pcps_acquisition_fpga::set_doppler_center (
    int32_t doppler_center)
```

Set Doppler center frequency for the grid search. It will refresh the Doppler grid.

**Parameters**

<i>doppler_center</i>	- Frequency center of the search grid [Hz].
-----------------------	---

**10.312.3.8 set\_doppler\_max()**

```
void pcps_acquisition_fpga::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

**Parameters**

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 139 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.9 set\_doppler\_step()**

```
void pcps_acquisition_fpga::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

**Parameters**

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 149 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.10 set\_gnss\_synchro()**

```
void pcps_acquisition_fpga::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 71 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.11 set\_local\_code()**

```
void pcps_acquisition_fpga::set_local_code ()
```

Sets local code for PCPS acquisition algorithm.

**10.312.3.12 set\_state()**

```
void pcps_acquisition_fpga::set_state (
    int32_t state)
```

If set to 1, ensures that acquisition starts at the first available sample.

## Parameters

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.312.3.13 set\_threshold()**

```
void pcps_acquisition_fpga::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

## Parameters

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 130 of file [pcps\\_acquisition\\_fpga.h](#).

**10.312.3.14 stop\_acquisition()**

```
void pcps_acquisition_fpga::stop_acquisition ()
```

stop the acquisition and the other FPGA modules.

## 10.313.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition.

Check [An Open Source Galileo E1 Software Receiver](#), Algorithm 1, for a pseudocode description of this implementation.

Definition at line 75 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

## 10.313.2 Constructor & Destructor Documentation

### 10.313.2.1 ~pcps\_assisted\_acquisition\_cc()

```
pcps_assisted_acquisition_cc::~pcps_assisted_acquisition_cc ()
```

Default destructor.

## 10.313.3 Member Function Documentation

### 10.313.3.1 general\_work()

```
int pcps_assisted_acquisition_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Parallel Code Phase Search Acquisition signal processing.

### 10.313.3.2 init()

```
void pcps_assisted_acquisition_cc::init ()
```

Initializes acquisition algorithm.

### 10.313.3.3 mag()

```
uint32_t pcps_assisted_acquisition_cc::mag () const [inline]
```

Returns the maximum peak of grid search.

Definition at line 96 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.4 set\_active()**

```
void pcps_assisted_acquisition_cc::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

**Parameters**

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 117 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.5 set\_channel()**

```
void pcps_assisted_acquisition_cc::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

**Parameters**

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 126 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.6 set\_channel\_fsm()**

```
void pcps_assisted_acquisition_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 134 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.7 set\_doppler\_max()**

```
void pcps_assisted_acquisition_cc::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

**Parameters**

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 158 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.8 set\_doppler\_step()**

```
void pcps_assisted_acquisition_cc::set_doppler_step (
    uint32_t doppler_step)
```

Set Doppler steps for the grid search.

**Parameters**

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

**10.313.3.9 set\_gnss\_synchro()**

```
void pcps_assisted_acquisition_cc::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 88 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.10 set\_local\_code()**

```
void pcps_assisted_acquisition_cc::set_local_code (
    std::complex< float > * code)
```

Sets local code for PCPS acquisition algorithm.

## Parameters

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.313.3.11 set\_state()**

```
void pcps_assisted_acquisition_cc::set_state (
    int32_t state) [inline]
```

Definition at line 149 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

**10.313.3.12 set\_threshold()**

```
void pcps_assisted_acquisition_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

## Parameters

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 144 of file [pcps\\_assisted\\_acquisition\\_cc.h](#).

## 10.314.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with Coherent [Channel](#) Combining With Sign Recovery scheme.

Definition at line 62 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

## 10.314.2 Constructor & Destructor Documentation

### 10.314.2.1 ~pcps\_cccwsr\_acquisition\_cc()

```
pcps_cccwsr_acquisition_cc::~pcps_cccwsr_acquisition_cc ()
```

Default destructor.

## 10.314.3 Member Function Documentation

### 10.314.3.1 general\_work()

```
int pcps_cccwsr_acquisition_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Coherent [Channel](#) Combining With Sign Recovery Acquisition signal processing.

### 10.314.3.2 init()

```
void pcps_cccwsr_acquisition_cc::init ()
```

Initializes acquisition algorithm.

### 10.314.3.3 mag()

```
uint32_t pcps_cccwsr_acquisition_cc::mag () const [inline]
```

Returns the maximum peak of grid search.  
Definition at line 83 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

### 10.314.3.4 set\_active()

```
void pcps_cccwsr_acquisition_cc::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

## Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 105 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.5 set\_channel()**

```
void pcps_cccwsr_acquisition_cc::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

## Parameters

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 121 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.6 set\_channel\_fsm()**

```
void pcps_cccwsr_acquisition_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 129 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.7 set\_doppler\_max()**

```
void pcps_cccwsr_acquisition_cc::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

## Parameters

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 148 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.8 set\_doppler\_step()**

```
void pcps_cccwsr_acquisition_cc::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

## Parameters

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 157 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.9 set\_gnss\_synchro()**

```
void pcps_cccwsr_acquisition_cc::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 75 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

**10.314.3.10 set\_local\_code()**

```
void pcps_cccwsr_acquisition_cc::set_local_code (
    std::complex< float > * code_data,
    std::complex< float > * code_pilot)
```

Sets local code for CCCWSR acquisition algorithm.

**Parameters**

<i>data_code</i>	- Pointer to the data PRN code.
<i>pilot_code</i>	- Pointer to the pilot PRN code.

**10.314.3.11 set\_state()**

```
void pcps_cccwsr_acquisition_cc::set_state (
    int32_t state)
```

If set to 1, ensures that acquisition starts at the first available sample.

**Parameters**

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.314.3.12 set\_threshold()**

```
void pcps_cccwsr_acquisition_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of CCCWSR algorithm.

**Parameters**

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 139 of file [pcps\\_cccwsr\\_acquisition\\_cc.h](#).

Definition at line 83 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

## 10.315.2 Constructor & Destructor Documentation

### 10.315.2.1 ~pcps\_openc1\_acquisition\_cc()

```
pcps_openc1_acquisition_cc::~pcps_openc1_acquisition_cc ()
```

Default destructor.

## 10.315.3 Member Function Documentation

### 10.315.3.1 general\_work()

```
int pcps_openc1_acquisition_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Parallel Code Phase Search Acquisition signal processing.

### 10.315.3.2 init()

```
void pcps_openc1_acquisition_cc::init ()
```

Initializes acquisition algorithm.

### 10.315.3.3 mag()

```
uint32_t pcps_openc1_acquisition_cc::mag () const [inline]
```

Returns the maximum peak of grid search.  
Definition at line 104 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

### 10.315.3.4 openc1\_ready()

```
bool pcps_openc1_acquisition_cc::openc1_ready () const [inline]
```

Definition at line 182 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.5 set\_active()**

```
void pcps_openc1_acquisition_cc::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

**Parameters**

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 125 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.6 set\_channel()**

```
void pcps_openc1_acquisition_cc::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

**Parameters**

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 141 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.7 set\_channel\_fsm()**

```
void pcps_openc1_acquisition_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 149 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.8 set\_doppler\_max()**

```
void pcps_openc1_acquisition_cc::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

**Parameters**

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 168 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.9 set\_doppler\_step()**

```
void pcps_openc1_acquisition_cc::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

**Parameters**

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 177 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

### 10.315.3.10 set\_gnss\_synchro()

```
void pcps_openc1_acquisition_cc::set_gnss_synchro (  
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 96 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

**10.315.3.11 set\_local\_code()**

```
void pcps_openc1_acquisition_cc::set_local_code (
    std::complex< float > * code)
```

Sets local code for PCPS acquisition algorithm.

## Parameters

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.315.3.12 set\_state()**

```
void pcps_openc1_acquisition_cc::set_state (
    int state)
```

If set to 1, ensures that acquisition starts at the first available sample.

## Parameters

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.315.3.13 set\_threshold()**

```
void pcps_openc1_acquisition_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

## Parameters

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 159 of file [pcps\\_openc1\\_acquisition\\_cc.h](#).

The documentation for this class was generated from the following file:

## 10.316.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with the implementation of the Sparse QuickSync Algorithm.

Check [Faster GPS via the Sparse Fourier Transform](#), for details of its implementation and functionality.

Definition at line 84 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

## 10.316.2 Constructor & Destructor Documentation

### 10.316.2.1 ~pcps\_quicksync\_acquisition\_cc()

```
pcps_quicksync_acquisition_cc::~pcps_quicksync_acquisition_cc ()
```

Default destructor.

## 10.316.3 Member Function Documentation

### 10.316.3.1 general\_work()

```
int pcps_quicksync_acquisition_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Parallel Code Phase Search Acquisition signal processing.

### 10.316.3.2 init()

```
void pcps_quicksync_acquisition_cc::init ()
```

Initializes acquisition algorithm.

### 10.316.3.3 mag()

```
uint32_t pcps_quicksync_acquisition_cc::mag () const [inline]
```

Returns the maximum peak of grid search.  
Definition at line 105 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

#### 10.316.3.4 set\_active()

```
void pcps_quicksync_acquisition_cc::set_active (
    bool active) [inline]
```

Starts acquisition algorithm, turning from standby mode to active mode.

##### Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 126 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

#### 10.316.3.5 set\_channel()

```
void pcps_quicksync_acquisition_cc::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

##### Parameters

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 142 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

#### 10.316.3.6 set\_channel\_fsm()

```
void pcps_quicksync_acquisition_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 150 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

#### 10.316.3.7 set\_doppler\_max()

```
void pcps_quicksync_acquisition_cc::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

##### Parameters

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 169 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

#### 10.316.3.8 set\_doppler\_step()

```
void pcps_quicksync_acquisition_cc::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

##### Parameters

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 178 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

### 10.316.3.9 set\_gnss\_synchro()

```
void pcps_quicksync_acquisition_cc::set_gnss_synchro (  
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 97 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

**10.316.3.10 set\_local\_code()**

```
void pcps_quicksync_acquisition_cc::set_local_code (
    std::complex< float > * code)
```

Sets local code for PCPS acquisition algorithm.

## Parameters

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.316.3.11 set\_state()**

```
void pcps_quicksync_acquisition_cc::set_state (
    int32_t state)
```

If set to 1, ensures that acquisition starts at the first available sample.

## Parameters

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.316.3.12 set\_threshold()**

```
void pcps_quicksync_acquisition_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of PCPS algorithm.

## Parameters

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 160 of file [pcps\\_quicksync\\_acquisition\\_cc.h](#).

The documentation for this class was generated from the following file:

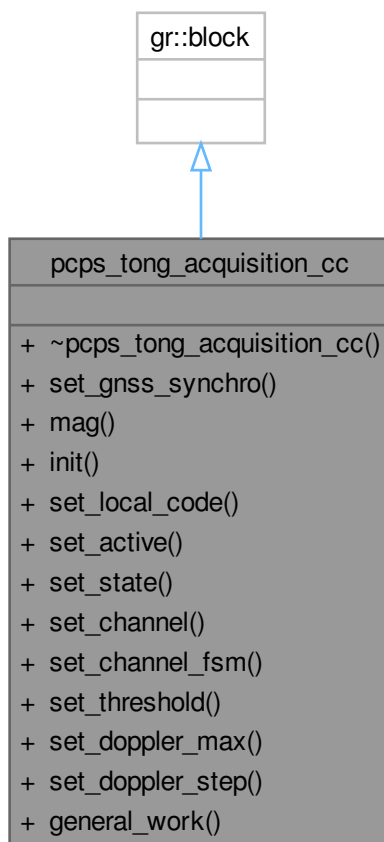

- [pcps\\_quicksync\\_acquisition\\_cc.h](#)

**10.317 pcps\_tong\_acquisition\_cc Class Reference**

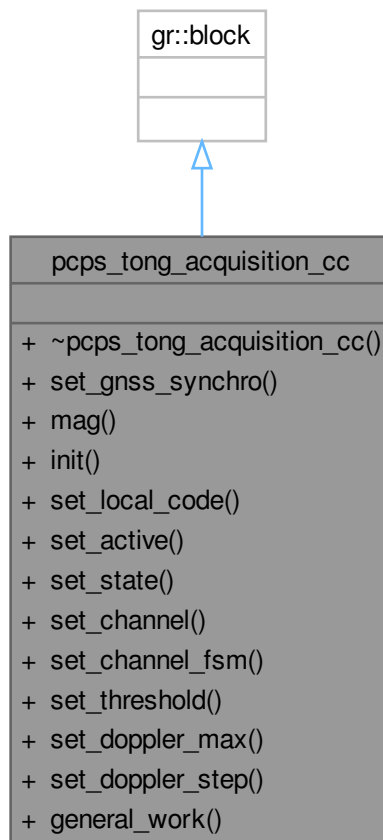

This class implements a Parallel Code Phase Search Acquisition with Tong algorithm.

```
#include <pcps_tong_acquisition_cc.h>
```

## 10.317.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with Tong algorithm.  
Definition at line 78 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

## 10.317.2 Constructor & Destructor Documentation

### 10.317.2.1 ~pcps\_tong\_acquisition\_cc()

`pcps_tong_acquisition_cc::~~pcps_tong_acquisition_cc ()`  
Default destructor.

## 10.317.3 Member Function Documentation

### 10.317.3.1 general\_work()

```
int pcps_tong_acquisition_cc::general_work (
    int noutput_items,
    gr_vector_int & ninput_items,
    gr_vector_const_void_star & input_items,
    gr_vector_void_star & output_items)
```

Parallel Code Phase Search Acquisition signal processing.

### 10.317.3.2 init()

`void pcps_tong_acquisition_cc::init ()`  
Initializes acquisition algorithm.

### 10.317.3.3 mag()

`uint32_t pcps_tong_acquisition_cc::mag () const [inline]`  
Returns the maximum peak of grid search.  
Definition at line 99 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

### 10.317.3.4 set\_active()

`void pcps_tong_acquisition_cc::set_active (
 bool active) [inline]`  
Starts acquisition algorithm, turning from standby mode to active mode.

## Parameters

<i>active</i>	- bool that activates/deactivates the block.
---------------	--

Definition at line 120 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.5 set\_channel()**

```
void pcps_tong_acquisition_cc::set_channel (
    uint32_t channel) [inline]
```

Set acquisition channel unique ID.

## Parameters

<i>channel</i>	- receiver channel.
----------------	---------------------

Definition at line 136 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.6 set\_channel\_fsm()**

```
void pcps_tong_acquisition_cc::set_channel_fsm (
    std::weak_ptr< ChannelFsm > channel_fsm) [inline]
```

Set channel fsm associated to this acquisition instance.

Definition at line 144 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.7 set\_doppler\_max()**

```
void pcps_tong_acquisition_cc::set_doppler_max (
    uint32_t doppler_max) [inline]
```

Set maximum Doppler grid search.

## Parameters

<i>doppler_max</i>	- Maximum Doppler shift considered in the grid search [Hz].
--------------------	---

Definition at line 163 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.8 set\_doppler\_step()**

```
void pcps_tong_acquisition_cc::set_doppler_step (
    uint32_t doppler_step) [inline]
```

Set Doppler steps for the grid search.

## Parameters

<i>doppler_step</i>	- Frequency bin of the search grid [Hz].
---------------------	--

Definition at line 172 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.9 set\_gnss\_synchro()**

```
void pcps_tong_acquisition_cc::set_gnss_synchro (
    Gnss_Synchro * p_gnss_synchro) [inline]
```

Set acquisition/tracking common [Gnss\\_Synchro](#) object pointer to exchange synchronization data between acquisition and tracking blocks.

## Parameters

<i>p_gnss_synchro</i>	Satellite information shared by the processing blocks.
-----------------------	--

Definition at line 91 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

**10.317.3.10 set\_local\_code()**

```
void pcps_tong_acquisition_cc::set_local_code (
    std::complex< float > * code)
```

Sets local code for TONG acquisition algorithm.

**Parameters**

<i>code</i>	- Pointer to the PRN code.
-------------	----------------------------

**10.317.3.11 set\_state()**

```
void pcps_tong_acquisition_cc::set_state (
    int32_t state)
```

If set to 1, ensures that acquisition starts at the first available sample.

**Parameters**

<i>state</i>	- int=1 forces start of acquisition
--------------	-------------------------------------

**10.317.3.12 set\_threshold()**

```
void pcps_tong_acquisition_cc::set_threshold (
    float threshold) [inline]
```

Set statistics threshold of TONG algorithm.

**Parameters**

<i>threshold</i>	- Threshold for signal detection (check <a href="#">Navitec2012</a> , Algorithm 1, for a definition of this threshold).
------------------	---

Definition at line 154 of file [pcps\\_tong\\_acquisition\\_cc.h](#).

#### 10.322.2.9 trop

```
trop_t* pppcorr_t::trop[MAXSTA]
```

Definition at line 748 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.323 pps\_tcp\_rx Class Reference

Collaboration diagram for pps\_tcp\_rx:

pps_tcp_rx
+ is_connected
+ pps_tcp_rx()
+ ~pps_tcp_rx()
+ receive_pps()
+ send_cmd()
+ set_pps_samplestamp_queue()

### Public Member Functions

- void **receive\_pps** (const std::string &ip\_address, int port)
- bool **send\_cmd** (std::string cmd) const
- void **set\_pps\_samplestamp\_queue** (std::shared\_ptr< [Concurrent\\_Queue](#)< [PpsSamplestamp](#) > > queue)

### Public Attributes

- volatile bool [is\\_connected](#) {false}

### 10.323.1 Detailed Description

Definition at line 27 of file [ppstcprx.h](#).

### 10.323.2 Member Data Documentation

#### 10.323.2.1 is\_connected

```
volatile bool pps_tcp_rx::is_connected {false}
```

Definition at line 34 of file [ppstcprx.h](#).

The documentation for this class was generated from the following file:

- [ppstcprx.h](#)

## 10.324 PpsSamplestamp Class Reference

Collaboration diagram for PpsSamplestamp:

### Public Attributes

- `uint64_t samplestamp = 0`
- `uint32_t overflow_reg = 0`

### 10.324.1 Detailed Description

Definition at line 21 of file [pps\\_samplestamp.h](#).

### 10.324.2 Member Data Documentation

#### 10.324.2.1 overflow\_reg

`uint32_t PpsSamplestamp::overflow_reg = 0`

Definition at line 25 of file [pps\\_samplestamp.h](#).

#### 10.324.2.2 samplestamp

`uint64_t PpsSamplestamp::samplestamp = 0`

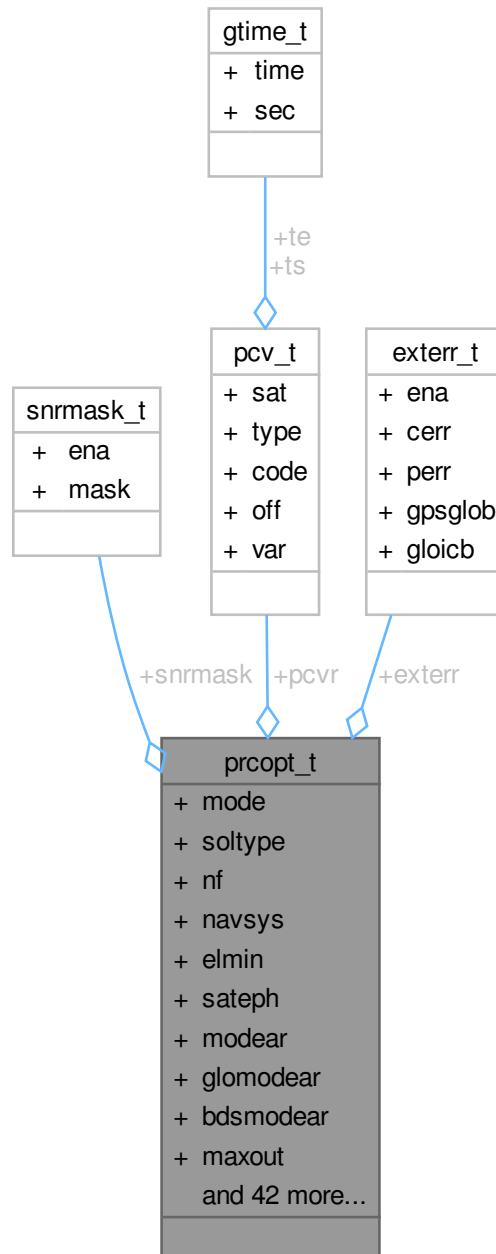

Definition at line 24 of file [pps\\_samplestamp.h](#).

The documentation for this class was generated from the following file:

- [pps\\_samplestamp.h](#)

## 10.325 prcopt\_t Struct Reference

- virtual `gr::basic_block_sptr` [get\\_left\\_block](#) (int RF\_channel)
- virtual `gr::basic_block_sptr` [get\\_right\\_block](#) (int RF\_channel)
- virtual void [start](#) ()

*Start the flow of samples if needed.*

### 10.327.1 Detailed Description

Definition at line 39 of file [pulse\\_blanking\\_filter.h](#).

### 10.327.2 Member Function Documentation

#### 10.327.2.1 [connect\(\)](#)

```
void PulseBlankingFilter::connect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.327.2.2 [disconnect\(\)](#)

```
void PulseBlankingFilter::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.327.2.3 [get\\_left\\_block\(\)](#)

```
gr::basic_block_sptr PulseBlankingFilter::get_left_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.327.2.4 [get\\_right\\_block\(\)](#)

```
gr::basic_block_sptr PulseBlankingFilter::get_right_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.327.2.5 [implementation\(\)](#)

```
std::string PulseBlankingFilter::implementation () [inline], [override], [virtual]
```

Returns "Pulse\_Blanking\_Filter".

Implements [GNSSBlockInterface](#).

Definition at line 54 of file [pulse\\_blanking\\_filter.h](#).

#### 10.327.2.6 [item\\_size\(\)](#)

```
size_t PulseBlankingFilter::item_size () [inline], [override], [virtual]
```

Implements [GNSSBlockInterface](#).

Definition at line 59 of file [pulse\\_blanking\\_filter.h](#).

#### 10.327.2.7 [role\(\)](#)

```
std::string PulseBlankingFilter::role () [inline], [override], [virtual]
```

Implements [GNSSBlockInterface](#).

Definition at line 48 of file [pulse\\_blanking\\_filter.h](#).

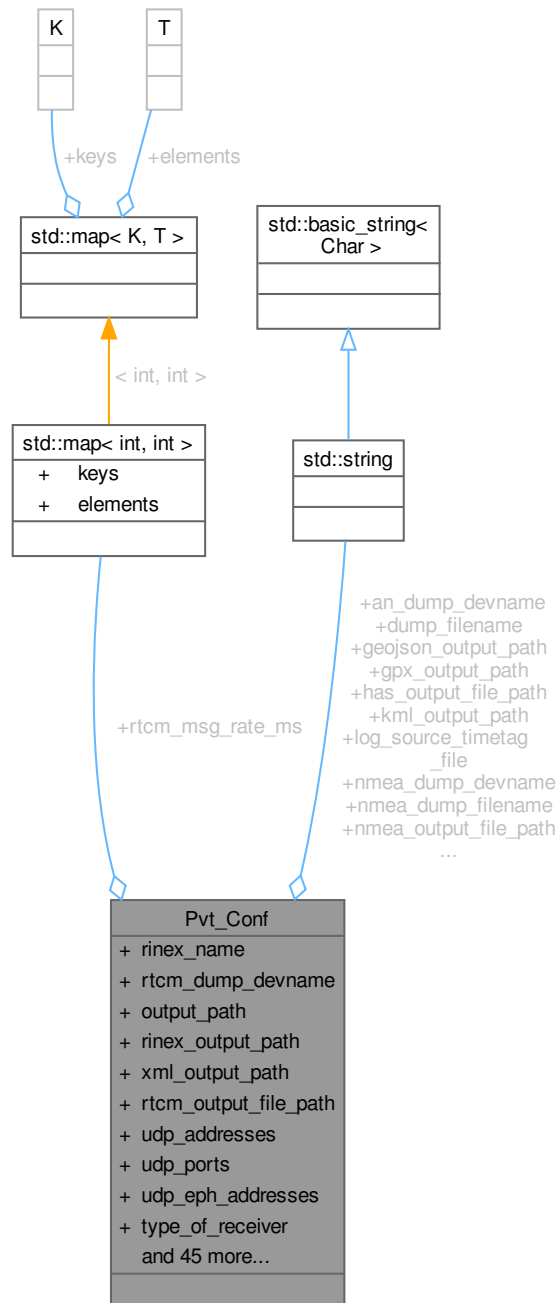

The documentation for this class was generated from the following file:

- [pulse\\_blanking\\_filter.h](#)

### 10.330.1 Detailed Description

Base class for a PVT solution.

Definition at line 34 of file [pvt\\_solution.h](#).

### 10.330.2 Member Function Documentation

#### 10.330.2.1 `get_clock_drift_ppm()`

```
double Pvt_Solution::get_clock_drift_ppm () const
```

Get the Rx clock drift [ppm].

#### 10.330.2.2 `get_course_over_ground()`

```
double Pvt_Solution::get_course_over_ground () const
```

Get RX course over ground [deg].

#### 10.330.2.3 `get_height()`

```
double Pvt_Solution::get_height () const
```

Get RX position height WGS84 [m].

#### 10.330.2.4 `get_latitude()`

```
double Pvt_Solution::get_latitude () const
```

Get RX position Latitude WGS84 [deg].

#### 10.330.2.5 `get_longitude()`

```
double Pvt_Solution::get_longitude () const
```

Get RX position Longitude WGS84 [deg].

#### 10.330.2.6 `get_num_valid_observations()`

```
int Pvt_Solution::get_num_valid_observations () const
```

Get the number of valid pseudorange observations (valid satellites)

#### 10.330.2.7 get\_speed\_over\_ground()

double Pvt\_Solution::get\_speed\_over\_ground () const  
Get RX speed over ground [m/s].

#### 10.330.2.8 get\_time\_offset\_s()

double Pvt\_Solution::get\_time\_offset\_s () const  
Get RX time offset [s].

#### 10.330.2.9 set\_clock\_drift\_ppm()

void Pvt\_Solution::set\_clock\_drift\_ppm (  
    double clock\_drift\_ppm)  
Set the Rx clock drift [ppm].

#### 10.330.2.10 set\_course\_over\_ground()

void Pvt\_Solution::set\_course\_over\_ground (  
    double cog\_deg)  
Set RX course over ground [deg].

#### 10.330.2.11 set\_num\_valid\_observations()

void Pvt\_Solution::set\_num\_valid\_observations (  
    int num)  
Set the number of valid pseudorange observations (valid satellites)

#### 10.330.2.12 set\_pre\_2009\_file()

void Pvt\_Solution::set\_pre\_2009\_file (  
    bool pre\_2009\_file)  
Flag for the week rollover computation in post processing mode for signals older than 2009.

#### 10.330.2.13 set\_rx\_pos()

void Pvt\_Solution::set\_rx\_pos (  
    const std::array< double, 3 > & pos)  
Set position: X, Y, Z in Cartesian ECEF coordinates [m].

#### 10.330.2.14 set\_rx\_vel()

void Pvt\_Solution::set\_rx\_vel (  
    const std::array< double, 3 > & vel)  
Set velocity: East [m/s], North [m/s], Up [m/s].

#### 10.330.2.15 set\_speed\_over\_ground()

void Pvt\_Solution::set\_speed\_over\_ground (  
    double speed\_m\_s)  
Set RX speed over ground [m/s].

#### 10.330.2.16 set\_time\_offset\_s()

void Pvt\_Solution::set\_time\_offset\_s (  
    double offset)  
Set RX time offset [s].

### 10.331.1 Detailed Description

This class represents an interface to a PVT block.

Abstract class for PVT interfaces, derived from [GNSSBlockInterface](#). Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.

Definition at line 48 of file [pvt\\_interface.h](#).

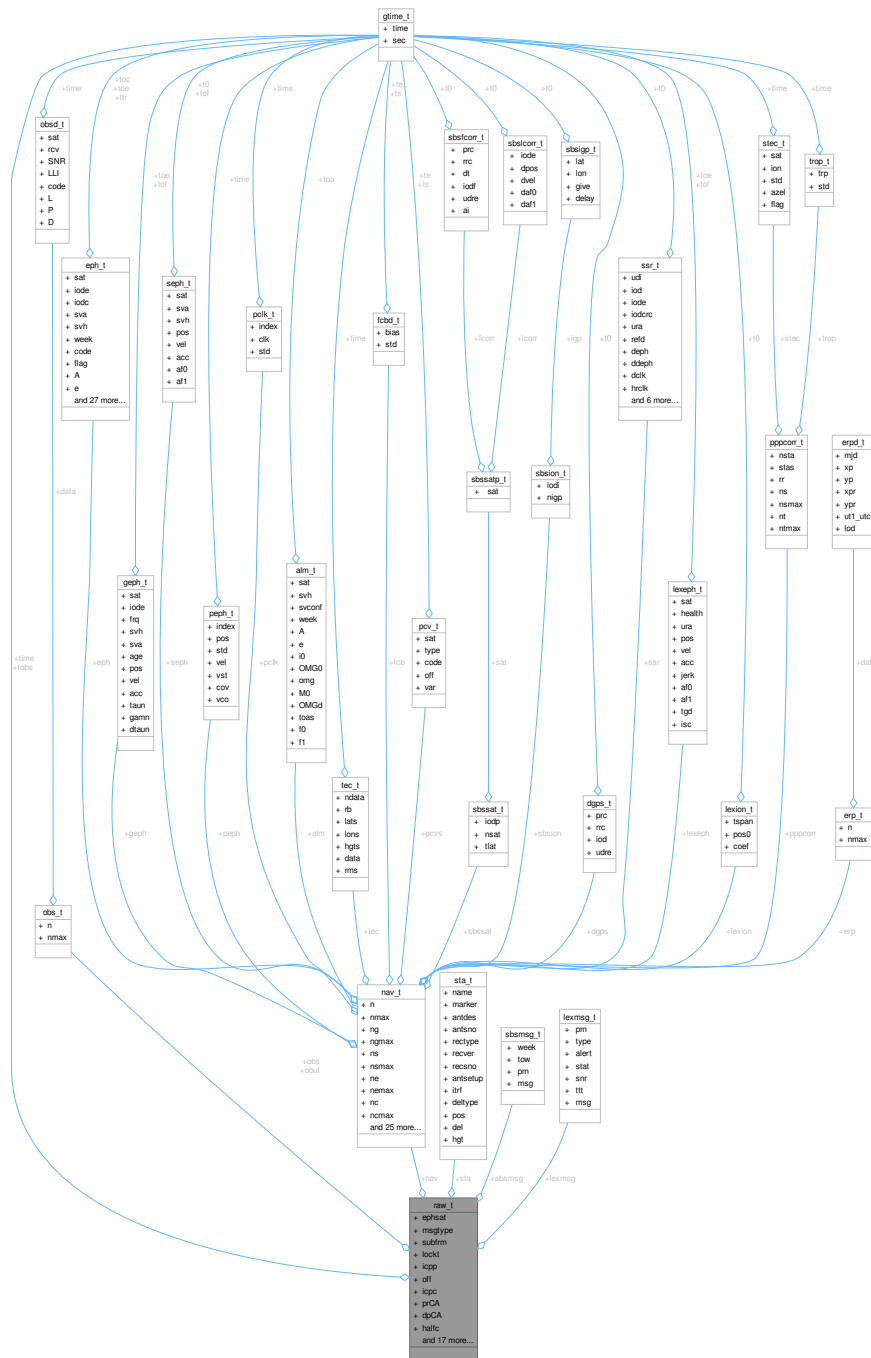

The documentation for this class was generated from the following file:

- [pvt\\_interface.h](#)

*Encode data with the generator polynomial (for testing purposes)*

### 10.334.1 Detailed Description

Class implementing a Reed-Solomon encoder and decoder RS(255,K,d) where  $k=255-nroots$  is the information vector length and  $d=nroots+1$  is the minimum Hamming distance, with symbols of 8 bits. It allows shortened RS codes.

Definition at line 40 of file [reed\\_solomon.h](#).

### 10.334.2 Constructor & Destructor Documentation

#### 10.334.2.1 ReedSolomon() [1/2]

```
ReedSolomon::ReedSolomon (
    const std::string & gnss_signal = std::string()) [explicit]
```

Default constructor. Constructs a Reed Solomon object. The `encode_with_generator_poly` and `encode_with_generator_matrix` methods are available for testing purposes.

`gnss_signal`: empty or "E6B" sets the Galileo E6B RS parameters. "E1B" sets the Galileo E1B (INAV) RS parameters.

### 10.334.2.2 ReedSolomon() [2/2]

```
ReedSolomon::ReedSolomon (
    int nroots,
    int minpoly,
    int prim,
    int fcr,
    int pad = 0,
    int shortening = 0,
    const std::vector< uint8_t > & genpoly_coeff = std::vector< uint8_t > {},
    const std::vector< std::vector< uint8_t > > & gen_matrix = std::vector< std::vector< uint8_t > > {} )
```

Custom constructor for RS(255, 255-nroots, nroots+1). Parameters:

`nroots` - the number of roots in the RS code generator polynomial, which is the same as the number of parity symbols in a block.

`minpoly` - primitive polynomial.

`prim` - the primitive root of the generator polynomial.

`fcr` - first consecutive root of the Reed-Solomon generator polynomial.

`pad` - the number of pad symbols in a block. If not defined, it defaults to 0.

`shortening` - value of the shortening parameter. Defaults to 0. If different to 0, it defines a shortened RS encoder/decoder.

`genpoly_coeff` - a vector of (nroots+1) elements containing the generator polynomial coefficients. Only used for encoding. Defaults to empty. If defined, the `encode_with_generator_poly` method can be used.

`gen_matrix` - a (255-shortening)x(255-nroots-shortening) matrix containing the elements of the generator matrix. Only used for encoding. Defaults to empty. If defined, the `encode_with_generator_matrix` method can be used.

## 10.334.3 Member Function Documentation

### 10.334.3.1 decode()

```
int ReedSolomon::decode (
    std::vector< uint8_t > & data_to_decode,
    const std::vector< int > & erasure_positions = std::vector< int > {} ) const
```

Decode an encoded block.

The decoded symbols are at the first 255-nroots-shortening elements of the `data_to_decode` vector.

The second parameter is optional, and contains a vector of erasure positions to be passed to the decoding algorithm. Defaults to empty.

Returns the number of corrected errors, or -1 if decoding failed.

### 10.334.3.2 encode\_with\_generator\_matrix()

```
std::vector< uint8_t > ReedSolomon::encode_with_generator_matrix (
    const std::vector< uint8_t > & data_to_encode) const
```

Encode data with the generator matrix (for testing purposes)

Returns the encoded vector. It is set to all zeros if the generator matrix is not defined.

### 10.334.3.3 encode\_with\_generator\_poly()

```
std::vector< uint8_t > ReedSolomon::encode_with_generator_poly (
    const std::vector< uint8_t > & data_to_encode) const
```

Encode data with the generator polynomial (for testing purposes)

Returns the encoded vector. It is set to all zeros if the generator polynomial is not defined.

### 10.335.1 Detailed Description

Class that handles the generation of Receiver INdependent EXchange format (RINEX) files.  
Definition at line 83 of file [rinex\\_printer.h](#).

### 10.335.2 Constructor & Destructor Documentation

#### 10.335.2.1 Rinex\_Printer()

```
Rinex_Printer::Rinex_Printer (
    int version = 0,
    const std::string & base_path = ".",
    const std::string & base_name = "-") [explicit]
```

Constructor. Creates GNSS Navigation and Observables RINEX files.

#### 10.335.2.2 ~Rinex\_Printer()

```
Rinex_Printer::~~Rinex_Printer ()
```

Destructor. Removes created files if empty.

### 10.335.3 Member Function Documentation

#### 10.335.3.1 get\_navfilename()

```
std::vector< std::string > Rinex_Printer::get_navfilename () const [inline]
```

Returns name of RINEX navigation file(s)

Definition at line 222 of file [rinex\\_printer.h](#).

#### 10.335.3.2 get\_obsfilename()

```
std::string Rinex_Printer::get_obsfilename () const [inline]
```

Returns name of RINEX observation file.

Definition at line 230 of file [rinex\\_printer.h](#).

#### 10.335.3.3 is\_rinex\_header\_written()

```
bool Rinex_Printer::is_rinex_header_written () const [inline]
```

Returns true is the RINEX file headers are already written.

Definition at line 214 of file [rinex\\_printer.h](#).

#### 10.335.3.4 log\_rinex\_nav\_bds\_dnav()

```
void Rinex_Printer::log_rinex_nav_bds_dnav (
    int type_of_rx,
    const std::map< int32_t, Beidou_Dnav_Ephemeris > & new_bds_eph)
```

Print RINEX annotation for BeiDou DNAV message.

**10.335.3.5 log\_rinex\_nav\_gal\_nav()**

```
void Rinex_Printer::log_rinex_nav_gal_nav (
    int type_of_rx,
    const std::map< int32_t, Galileo_Ephemeris > & new_gal_eph)
```

Print RINEX annotation for Galileo NAV message.

**10.335.3.6 log\_rinex\_nav\_glo\_gnav()**

```
void Rinex_Printer::log_rinex_nav_glo_gnav (
    int type_of_rx,
    const std::map< int32_t, Glonass_Gnav_Ephemeris > & new_glo_eph)
```

Print RINEX annotation for Glonass GNAV message.

**10.335.3.7 log\_rinex\_nav\_gps\_cnav()**

```
void Rinex_Printer::log_rinex_nav_gps_cnav (
    int type_of_rx,
    const std::map< int32_t, Gps_CNAV_Ephemeris > & new_cnav_eph)
```

Print RINEX annotation for GPS CNAV message.

**10.335.3.8 log\_rinex\_nav\_gps\_nav()**

```
void Rinex_Printer::log_rinex_nav_gps_nav (
    int type_of_rx,
    const std::map< int32_t, Gps_Ephemeris > & new_eph)
```

Print RINEX annotation for GPS NAV message.

**10.335.3.9 print\_rinex\_annotation()**

```
void Rinex_Printer::print_rinex_annotation (
    const Rtklib_Solver * pvt_solver,
    const std::map< int, Gnss_Synchro > & gnss_observables_map,
    double rx_time,
    int type_of_rx,
    bool flag_write_RINEX_obs_output)
```

Print RINEX annotation. If it is the first annotation, it also prints the RINEX headers for navigation and observation files. If it is not the first annotation, it only annotates the observation, and updates the navigation header if UTC data was not available when writing it for the first time. The meaning of type\_of\_rx is as follows:

type_of_rx	Signals
0	Unknown
1	GPS L1 C/A

*Returns a string of binary symbols from a string of hexadecimal symbols.*
- `std::string bin_to_binary_data` (const std::string &s) const  
*Returns a string of binary data from a string of binary symbols.*
- `std::string binary_data_to_bin` (const std::string &s) const  
*Returns a string of binary symbols from a string of binary data.*
- `uint32_t bin_to_uint` (const std::string &s) const  
*Returns an uint32\_t from a string of binary symbols.*

- `int32_t bin_to_int (const std::string &s) const`
- `double bin_to_double (const std::string &s) const`  
Returns double from a string of binary symbols.
- `int32_t bin_to_sint (const std::string &s) const`
- `uint64_t hex_to_uint (const std::string &s) const`  
Returns an `uint64_t` from a string of hexadecimal symbols.
- `int64_t hex_to_int (const std::string &s) const`  
Returns a `int64_t` from a string of hexadecimal symbols.
- `bool check_CRC (const std::string &message) const`  
Checks that the CRC of a RTCM package is correct.
- `void run_server ()`  
Starts running the server.
- `void stop_server ()`  
Stops the server.
- `void send_message (const std::string &msg)`  
Sends a message through the server to all connected clients.
- `bool is_server_running () const`  
Returns true if the server is running, false otherwise.

### 10.336.1 Detailed Description

This class implements the generation and reading of some Message Types defined in the RTCM 3.2 Standard, plus some utilities to handle messages.

Generation of the following Message Types: 1001, 1002, 1003, 1004, 1005, 1006, 1008, 1019, 1020, 1029, 1045

Decoding of the following Message Types: 1019, 1045

Generation of the following Multiple Signal Messages: MSM1 (message types 1071, 1091) MSM2 (message types 1072, 1092) MSM3 (message types 1073, 1093) MSM4 (message types 1074, 1094) MSM5 (message types 1075, 1095) MSM6 (message types 1076, 1096) MSM7 (message types 1077, 1097)

RTCM 3 message format (size in bits): +-----+-----+-----+-----+ | preamble | 000000  
| length | data message | parity | +-----+-----+-----+-----+ |<- 8 --->|<- 6 -->|<- 10  
--->|<- length x 8 --->|<- 24 -->| +-----+-----+-----+-----+ +

### 10.336.2 Constructor & Destructor Documentation

#### 10.336.2.1 Rtcn()

```
Rtcn::Rtcn (
    uint16_t port = 2101) [explicit]
```

Default constructor that sets TCP port of the RTCM message server and RTCM Station ID. 2101 is the standard RTCM port according to the Internet Assigned Numbers Authority (IANA). See <https://www.iana.org/assignments/service-names-port-numbers/service-names-port-numbers.xml>.

### 10.336.3 Member Function Documentation

#### 10.336.3.1 bin\_to\_binary\_data()

```
std::string RtcM::bin_to_binary_data (  
    const std::string & s) const
```

Returns a string of binary data from a string of binary symbols.

#### 10.336.3.2 bin\_to\_double()

```
double RtcM::bin_to_double (  
    const std::string & s) const
```

Returns double from a string of binary symbols.

#### 10.336.3.3 bin\_to\_hex()

```
std::string RtcM::bin_to_hex (  
    const std::string & s) const
```

Returns a string of hexadecimal symbols from a string of binary symbols.

#### 10.336.3.4 bin\_to\_uint()

```
uint32_t RtcM::bin_to_uint (  
    const std::string & s) const
```

Returns an uint32\_t from a string of binary symbols.

#### 10.336.3.5 binary\_data\_to\_bin()

```
std::string RtcM::binary_data_to_bin (  
    const std::string & s) const
```

Returns a string of binary symbols from a string of binary data.

#### 10.336.3.6 check\_CRC()

```
bool RtcM::check_CRC (  
    const std::string & message) const
```

Checks that the CRC of a RTCM package is correct.

#### 10.336.3.7 hex\_to\_bin()

```
std::string RtcM::hex_to_bin (  
    const std::string & s) const
```

Returns a string of binary symbols from a string of hexadecimal symbols.

#### 10.336.3.8 hex\_to\_int()

```
int64_t RtcM::hex_to_int (  
    const std::string & s) const
```

Returns a int64\_t from a string of hexadecimal symbols.

#### 10.336.3.9 hex\_to\_uint()

```
uint64_t RtcM::hex_to_uint (  
    const std::string & s) const
```

Returns an uint64\_t from a string of hexadecimal symbols.

#### 10.336.3.10 is\_server\_running()

```
bool RtcM::is_server_running () const
```

Returns true if the server is running, false otherwise.

**10.336.3.11 lock\_time() [1/4]**

```
uint32_t RtcM::lock_time (
    const Galileo_Ephemeris & eph,
    double obs_time,
    const Gnss_Synchro & gnss_synchro)
```

Returns the time period in which Galileo signals have been continually tracked.

**10.336.3.12 lock\_time() [2/4]**

```
uint32_t RtcM::lock_time (
    const Glonass_Gnav_Ephemeris & eph,
    double obs_time,
    const Gnss_Synchro & gnss_synchro)
```

Locks time period in which GLONASS signals have been continually tracked.

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>obs_time</i>	Time of observation at the moment of printing
<i>observables</i>	Set of observables as defined by the platform

**Returns**

Returns the time period in which GLONASS signals have been continually tracked.

**10.336.3.13 lock\_time() [3/4]**

```
uint32_t RtcM::lock_time (
    const Gps_CNAV_Ephemeris & eph,
    double obs_time,
    const Gnss_Synchro & gnss_synchro)
```

Returns the time period in which GPS L2 signals have been continually tracked.

**10.336.3.14 lock\_time() [4/4]**

```
uint32_t RtcM::lock_time (
    const Gps_Ephemeris & eph,
    double obs_time,
    const Gnss_Synchro & gnss_synchro)
```

Returns the time period in which GPS L1 signals have been continually tracked.

**10.336.3.15 print\_IGM01()**

```
std::vector< std::string > RtcM::print_IGM01 (
    const Galileo_HAS_data & has_data)
```

Prints messages of type IGM01 (SSR Orbit Correction)

**10.336.3.16 print\_IGM02()**

```
std::vector< std::string > RtcM::print_IGM02 (
    const Galileo_HAS_data & has_data)
```

Prints messages of type IGM02 (SSR Clock Correction)

**10.336.3.17 print\_IGM03()**

```
std::vector< std::string > RtcM::print_IGM03 (
    const Galileo_HAS_data & has_data)
```

Prints messages of type IGM03 (SSR Combined Orbit and Clock Correction)

**10.336.3.18 print\_IGM05()**

```
std::vector< std::string > RtcM::print_IGM05 (
    const Galileo_HAS_data & has_data)
```

Prints messages of type IGM05 (SSR Bias Correction)

**10.336.3.19 print\_MSM\_1()**

```
std::string RtcM::print_MSM_1 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)
```

Prints messages of type MSM1 (Compact GNSS observables)

**10.336.3.20 print\_MSM\_2()**

```
std::string RtcM::print_MSM_2 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)
```

Prints messages of type MSM2 (Compact GNSS phaseranges)

**10.336.3.21 print\_MSM\_3()**

```
std::string RtcM::print_MSM_3 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
```

```

    bool divergence_free,
    bool more_messages)

```

Prints messages of type MSM3 (Compact GNSS pseudoranges and phaseranges)

### 10.336.3.22 print\_MSM\_4()

```

std::string RtcM::print_MSM_4 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)

```

Prints messages of type MSM4 (Full GNSS pseudoranges and phaseranges plus CNR)

### 10.336.3.23 print\_MSM\_5()

```

std::string RtcM::print_MSM_5 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)

```

Prints messages of type MSM5 (Full GNSS pseudoranges, phaseranges, phaserange rate and CNR)

### 10.336.3.24 print\_MSM\_6()

```

std::string RtcM::print_MSM_6 (
    const Gps_Ephemeris & gps_eph,
    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)

```

Prints messages of type MSM6 (Full GNSS pseudoranges and phaseranges plus CNR, high resolution)

### 10.336.3.25 print\_MSM\_7()

```

std::string RtcM::print_MSM_7 (
    const Gps_Ephemeris & gps_eph,

```

```

    const Gps_CNAV_Ephemeris & gps_cnav_eph,
    const Galileo_Ephemeris & gal_eph,
    const Glonass_Gnav_Ephemeris & glo_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint32_t ref_id,
    uint32_t clock_steering_indicator,
    uint32_t external_clock_indicator,
    int32_t smooth_int,
    bool divergence_free,
    bool more_messages)

```

Prints messages of type MSM7 (Full GNSS pseudoranges, phaseranges, phaserange rate and CNR, high resolution)

#### 10.336.3.26 print\_MT1001()

```

std::string RtcM::print_MT1001 (
    const Gps_Ephemeris & gps_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)

```

Prints message type 1001 (L1-Only GPS RTK Observables)

#### 10.336.3.27 print\_MT1002()

```

std::string RtcM::print_MT1002 (
    const Gps_Ephemeris & gps_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)

```

Prints message type 1002 (Extended L1-Only GPS RTK Observables)

#### 10.336.3.28 print\_MT1003()

```

std::string RtcM::print_MT1003 (
    const Gps_Ephemeris & ephL1,
    const Gps_CNAV_Ephemeris & ephL2,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)

```

Prints message type 1003 (L1 & L2 GPS RTK Observables)

#### 10.336.3.29 print\_MT1004()

```

std::string RtcM::print_MT1004 (
    const Gps_Ephemeris & ephL1,
    const Gps_CNAV_Ephemeris & ephL2,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)

```

Prints message type 1004 (Extended L1 & L2 GPS RTK Observables)

#### 10.336.3.30 print\_MT1005()

```

std::string RtcM::print_MT1005 (
    uint32_t ref_id,
    double ecef_x,
    double ecef_y,
    double ecef_z,

```

```

    bool gps,
    bool glonass,
    bool galileo,
    bool non_physical,
    bool single_oscillator,
    uint32_t quarter_cycle_indicator)

```

Prints message type 1005 (Stationary Antenna Reference Point)

#### 10.336.3.31 `print_MT1005_test()`

```
std::string RtcM::print_MT1005_test ()
```

For testing purposes.

#### 10.336.3.32 `print_MT1006()`

```

std::string RtcM::print_MT1006 (
    uint32_t ref_id,
    double ecef_x,
    double ecef_y,
    double ecef_z,
    bool gps,
    bool glonass,
    bool galileo,
    bool non_physical,
    bool single_oscillator,
    uint32_t quarter_cycle_indicator,
    double height)

```

Prints message type 1006 (Stationary Antenna Reference Point, with Height Information)

#### 10.336.3.33 `print_MT1008()`

```

std::string RtcM::print_MT1008 (
    uint32_t ref_id,
    const std::string & antenna_descriptor,
    uint32_t antenna_setup_id,
    const std::string & antenna_serial_number)

```

Prints message type 1008 (Antenna Descriptor & Serial Number)

#### 10.336.3.34 `print_MT1009()`

```

std::string RtcM::print_MT1009 (
    const Glonass\_Gnav\_Ephemeris & glonass_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss\_Synchro > & observables,
    uint16_t station_id)

```

Prints L1-Only GLONASS RTK Observables.

This GLONASS message type is not generally used or supported; type 1012 is to be preferred.

#### Note

Code added as part of GSoC 2017 program

#### Parameters

<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>obs_time</i>	Time of observation at the moment of printing
<i>observables</i>	Set of observables as defined by the platform

**Returns**

string with message contents

**10.336.3.35 print\_MT1010()**

```
std::string RtcM::print_MT1010 (
    const Glonass_Gnav_Ephemeris & glonass_gnav_eph,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)
```

Prints Extended L1-Only GLONASS RTK Observables.

This GLONASS message type is used when only L1 data is present and bandwidth is very tight, often 1012 is used in such cases.

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>obs_time</i>	Time of observation at the moment of printing
<i>observables</i>	Set of observables as defined by the platform

**Returns**

string with message contents

**10.336.3.36 print\_MT1011()**

```
std::string RtcM::print_MT1011 (
    const Glonass_Gnav_Ephemeris & glonass_gnav_ephL1,
    const Glonass_Gnav_Ephemeris & glonass_gnav_ephL2,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)
```

Prints L1&L2 GLONASS RTK Observables.

This GLONASS message type is not generally used or supported; type 1012 is to be preferred

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>obs_time</i>	Time of observation at the moment of printing
<i>observables</i>	Set of observables as defined by the platform

**Returns**

string with message contents

**10.336.3.37 print\_MT1012()**

```
std::string RtcM::print_MT1012 (
    const Glonass_Gnav_Ephemeris & glonass_gnav_ephL1,
    const Glonass_Gnav_Ephemeris & glonass_gnav_ephL2,
    double obs_time,
    const std::map< int32_t, Gnss_Synchro > & observables,
    uint16_t station_id)
```

Prints Extended L1&L2 GLONASS RTK Observables.

This GLONASS message type is the most common observational message type, with L1/L2/SNR content. This is one of the most common messages found.

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>obs_time</i>	Time of observation at the moment of printing
<i>observables</i>	Set of observables as defined by the platform

**Returns**

string with message contents

**10.336.3.38 print\_MT1019()**

```
std::string RtcM::print_MT1019 (
    const Gps_Ephemeris & gps_eph)
```

Prints message type 1019 (GPS Ephemeris), should be broadcast in the event that the IODC does not match the IODE, and every 2 minutes.

**10.336.3.39 print\_MT1020()**

```
std::string RtcM::print_MT1020 (
    const Glonass_Gnav_Ephemeris & glonass_gnav_eph,
    const Glonass_Gnav_Utc_Model & glonass_gnav_utc_model)
```

Prints message type 1020 (GLONASS Ephemeris).

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>glonass_gnav_utc_model</i>	GLONASS GNAV Clock Information

**Returns**

Returns message type as a string type

**10.336.3.40 print\_MT1029()**

```
std::string RtcM::print_MT1029 (
    uint32_t ref_id,
    const Gps_Ephemeris & gps_eph,
    double obs_time,
    const std::string & message)
```

Prints message type 1029 (Unicode Text String)

**10.336.3.41 print\_MT1045()**

```
std::string RtcM::print_MT1045 (
    const Galileo_Ephemeris & gal_eph)
```

Prints message type 1045 (Galileo Ephemeris), should be broadcast every 2 minutes.

**10.336.3.42 read\_MT1005()**

```
int32_t RtcM::read_MT1005 (
    const std::string & message,
    uint32_t & ref_id,
    double & ecef_x,
    double & ecef_y,
    double & ecef_z,
    bool & gps,
    bool & glonass,
    bool & galileo)
```

Verifies and reads messages of type 1005 (Stationary Antenna Reference Point). Returns 1 if anything goes wrong, 0 otherwise.

**10.336.3.43 read\_MT1019()**

```
int32_t RtcM::read_MT1019 (
    const std::string & message,
    Gps_Ephemeris & gps_eph) const
```

Verifies and reads messages of type 1019 (GPS Ephemeris). Returns 1 if anything goes wrong, 0 otherwise.

**10.336.3.44 read\_MT1020()**

```
int32_t RtcM::read_MT1020 (
    const std::string & message,
    Glonass_Gnav_Ephemeris & glonass_gnav_eph,
    Glonass_Gnav_Utc_Model & glonass_gnav_utc_model) const
```

Verifies and reads messages of type 1020 (GLONASS Ephemeris).

**Note**

Code added as part of GSoC 2017 program

**Parameters**

<i>message</i>	Message to read as a string type
<i>glonass_gnav_eph</i>	GLONASS GNAV Broadcast Ephemeris
<i>glonass_gnav_utc_model</i>	GLONASS GNAV Clock Information

**Returns**

Returns 1 if anything goes wrong, 0 otherwise.

**10.336.3.45 read\_MT1045()**

```
int32_t RtcM::read_MT1045 (
    const std::string & message,
    Galileo_Ephemeris & gal_eph) const
```

Verifies and reads messages of type 1045 (Galileo Ephemeris). Returns 1 if anything goes wrong, 0 otherwise.

**10.336.3.46 run\_server()**

```
void RtcM::run_server ()
```

Starts running the server.

### 10.336.3.47 send\_message()

```
void RtcM::send_message (
    const std::string & msg)
```

Sends a message through the server to all connected clients.

### 10.336.3.48 stop\_server()

```
void RtcM::stop_server ()
```

Stops the server.

### 10.337.1 Detailed Description

This class provides a implementation of a subset of the RTCM Standard 10403.2 messages.  
Definition at line 48 of file [rtcM\\_printer.h](#).

### 10.337.2 Constructor & Destructor Documentation

#### 10.337.2.1 RtcM\_Printer()

```
RtcM_Printer::RtcM_Printer (
    const std::string & filename,
    bool flag_rtcM_file_dump,
    bool flag_rtcM_server,
    bool flag_rtcM_tty_port,
    uint16_t rtcM_tcp_port,
    uint16_t rtcM_station_id,
    const std::string & rtcM_dump_devname,
    bool time_tag_name = true,
    const std::string & base_path = ".")
```

Default constructor.

#### 10.337.2.2 ~RtcM\_Printer()

```
RtcM_Printer::~~RtcM_Printer ()
```

Default destructor.

### 10.337.3 Member Function Documentation

#### 10.337.3.1 lock\_time()

```
uint32_t RtcM_Printer::lock_time (
    const Glonass\_Gnav\_Ephemeris & eph,
    double obs_time,
    const Gnss\_Synchro & gnss_synchro)
```

Locks time for logging given GLONASS GNAV Broadcast Ephemeris.

##### Note

Code added as part of GSoC 2017 program \params glonass\_gnav\_eph GLONASS GNAV Broadcast Ephemeris \params obs\_time Time of observation at the moment of printing \params observables Set of observables as defined by the platform

##### Returns

locked time during logging process

#### 10.337.3.2 print\_MT1005\_test()

```
std::string RtcM_Printer::print_MT1005_test ()
```

For testing purposes.

### 10.337.3.3 Print\_Rtcm\_Messages()

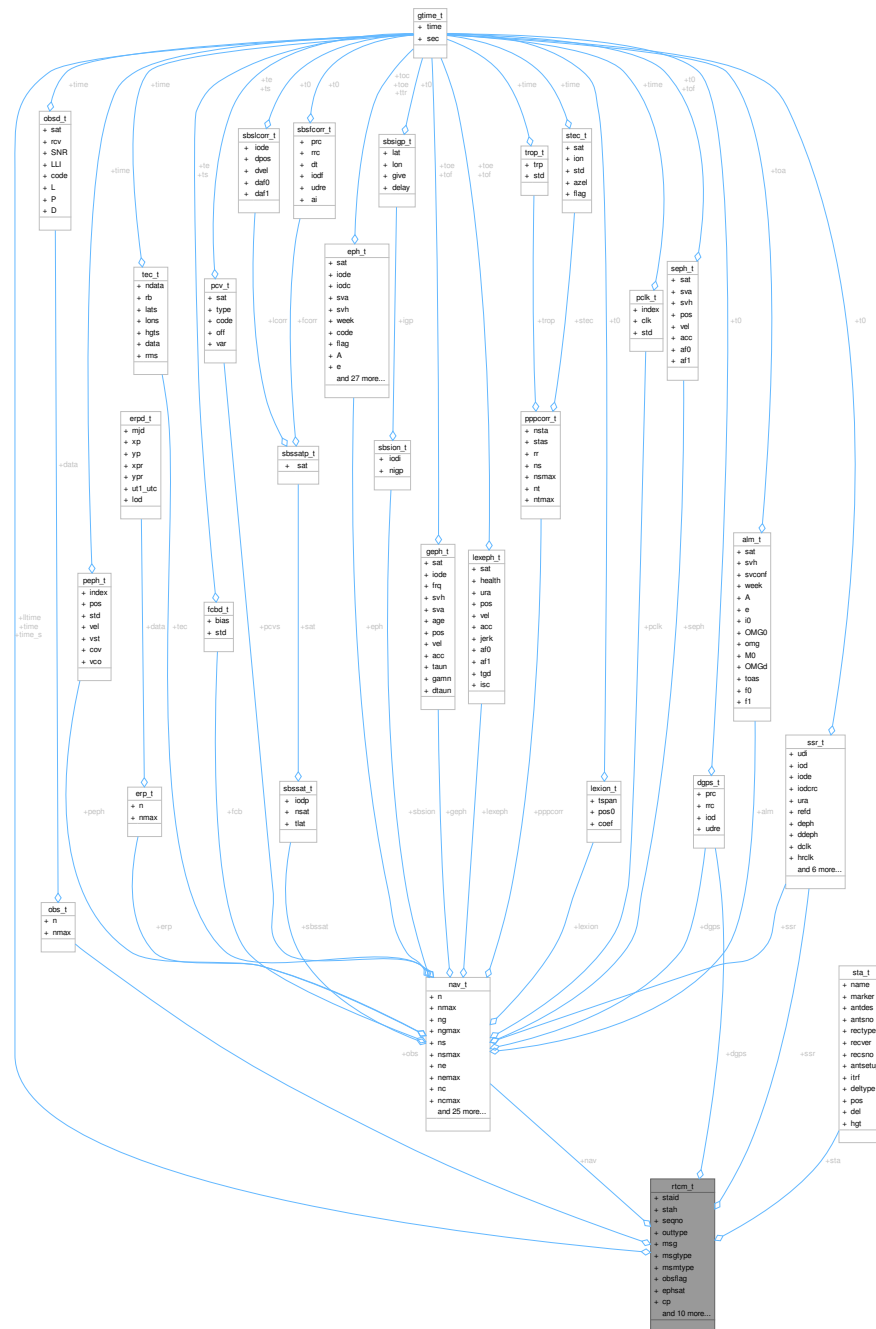

```
void Rtcm_Printer::Print_Rtcm_Messages (
    const Rtklib\_Solver * pvt_solver,
    const std::map< int, Gnss\_Synchro > & gnss_observables_map,
    double rx_time,
    int32_t type_of_rx,
    int32_t rtcm_MSM_rate_ms,
    int32_t rtcm_MT1019_rate_ms,
    int32_t rtcm_MT1020_rate_ms,
    int32_t rtcm_MT1045_rate_ms,
    int32_t rtcm_MT1077_rate_ms,
    int32_t rtcm_MT1097_rate_ms,
    bool flag_write_RTCM_MSM_output,
    bool flag_write_RTCM_1019_output,
    bool flag_write_RTCM_1020_output,
    bool flag_write_RTCM_1045_output,
    bool enable_rx_clock_correction)
```

Print RTCM messages.

### 10.340.1 Detailed Description

This class implements a [PvtInterface](#) for the RTKLIB PVT block.

Global configuration options used:

`GNSS-SDR.pre_2009_file` - flag indicating a file older than 2009 rollover should be processed (false) `GNSS-SDR.observable_interval_ms` - (20)

It supports the following configuration options:

`.dump` - (false) `.dump_filename` - ("/pvt.dat") `.dump_mat` - (true) `.rtk_trace_level` - debug level for the RTKLIB methods (0)

`.output_rate_ms` - (500) Note that the actual rate is the least common multiple of this value and `GNSS-SDR.observable_interval_ms` `.display_rate_ms` - (500)

`.flag_nmea_tty_port` - (false) `.nmea_dump_filename` - ("/nmea\_pvt.nmea") `.nmea_dump_devname` - ("/dev/tty1")

`.rinex_version` - (3) overridden by `-RINEX_version=n.nn` command line argument `.rinexobs_rate_ms` - rate at which RINEX observations are written (1000). Note that the actual rate is the least common multiple of this value and `.output_rate_ms` `.rinex_name` - (-RINEX\_name command-line argument)

`.flag_rtcmtty_port` - (false) `.rtcm_dump_devname` - ("/dev/pts/1") `.flag_rtcmtcp_server` - (false) `.rtcm_tcp_port` - (2101) `.rtcm_station_id` - (1234) Output rates ... all values are LCM with the computed output rate (above) `.rtcm_MT1019_rate_ms` - (5000) `.rtcm_MT1020_rate_ms` - (5000) `.rtcm_MT1045_rate_ms` - (5000) `.rtcm_MSM_rate_ms` - (1000) `.rtcm_MT1077_rate_ms` - (.rtcm\_MSM\_rate\_ms) `.rtcm_MT1087_rate_ms` - (.rtcm\_MSM\_rate\_ms) `.rtcm_MT1097_rate_ms` - (.rtcm\_MSM\_rate\_ms)

`.kml_rate_ms` - (1000) `.gpx_rate_ms` - (1000) `.geojson_rate_ms` - (1000) `.nmea_rate_ms` - (1000)

`.positioning_mode` - the RTKLIB positioning mode. ("Single") Supported values are "Single", "Static", "Kinematic", "PPP\_Static" and "PPP\_Kinematic". Unsupported modes include DGPS/DGNSS, Moving Baseline, Fixed, and PPP-fixed `.num_bands` - number of frequencies to use, between 1 and 3. Default is based on the channels configured `.elevation_mask` - (15.0). Value must be in the range [0,90.0] `.dynamics_model` - (0) 0:none, 1:velocity, 2:acceleration

`.iono_model` - ("OFF"). Supported values are "OFF", "Broadcast", "SBAS", "Iono-Free-LC", "Estimate\_STEC", "IONEX". Unsupported values include QZSS broadcast, QZSS LEX, and SLANT TEC. `.trop_model` - ("OFF"). Supported values are "OFF", "Saastamoinen", "SBAS", "Estimate\_ZTD", and "Estimate\_ZTD\_Grad". Unsupported values include ZTD correction and ZTD+grad correction `.phwindup` - phase windup correction for PPP modes (0)

`.reject_GPS_IIA` - whether the GPS Block IIA satellites in eclipse are excluded (0). Only applies in PPP-\* modes `.raim_fde` - whether RAIM (receiver autonomous integrity monitoring) FDE (fault detection and exclusion) is enabled (0)

`.earth_tide` - (0) `.navigation_system` - mask of navigation systems to use. Default based on configured channels 0x01:GPS, 0x02:SBAS, 0x04:GLONASS, 0x08:Galileo, 0x10:QZSS, 0x20:BeiDou, 0x40:IRNS, 0x80:LEO

`.AR_GPS` - Ambiguity Resolution mode for GPS ("Continuous"). Supported values are "OFF", "Continuous", "Instantaneous", "Fix-and-Hold", "PPP-AR". Unsupported values include PPP-AR ILS, WLNL, and TCAR. `.AR_GLO`

- Ambiguity Resolution mode for GLONASS (1). Value must be in the range [0,3]. (0:off,1:on,2:auto cal,3:ext cal)  
 .AR\_DBS - Ambiguity Resolution Mode for BeiDou (1). Value must be in the range [0,1]. (0:off,1:on) .min\_ratio\_↵  
 to\_fix\_ambiguity - (3.0) .min\_lock\_to\_fix\_ambiguity - (0) .min\_elevation\_to\_fix\_ambiguity - minimum elevation (deg)  
 to fix integer ambiguity (0.0) .outage\_reset\_ambiguity - (5) .slip\_threshold - (0.05) .threshold\_reject\_gdop - if GDOP  
 is over this value, the observable is excluded (30.0) .threshold\_reject\_innovation - if innovation is over this value, the  
 observable is excluded (30.0) .number\_filter\_iter - number of iterations for the estimation filter (1) .bias\_0 - (30.0)

## 10.340.2 Member Function Documentation

### 10.340.2.1 clear\_ephemeris()

```
void Rtklib_Pvt::clear_ephemeris () [override], [virtual]
```

Implements [PvtInterface](#).

### 10.340.2.2 connect()

```
void Rtklib_Pvt::connect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.340.2.3 disconnect()

```
void Rtklib_Pvt::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.340.2.4 get\_galileo\_almanac()

```
std::map< int, Galileo_Almanac > Rtklib_Pvt::get_galileo_almanac () const [override], [virtual]
```

Implements [PvtInterface](#).

### 10.340.2.5 get\_galileo\_ephemeris()

```
std::map< int, Galileo_Ephemeris > Rtklib_Pvt::get_galileo_ephemeris () const [override],
[virtual]
```

Implements [PvtInterface](#).

### 10.340.2.6 get\_gps\_almanac()

```
std::map< int, Gps_Almanac > Rtklib_Pvt::get_gps_almanac () const [override], [virtual]
```

Implements [PvtInterface](#).

#### 10.340.2.7 `get_gps_ephemeris()`

```
std::map< int, Gps\_Ephemeris > Rtklib_Pvt::get_gps_ephemeris () const [override], [virtual]
```

Implements [PvtInterface](#).

#### 10.340.2.8 `get_latest_PVT()`

```
bool Rtklib_Pvt::get_latest_PVT (
    double * longitude_deg,
    double * latitude_deg,
    double * height_m,
    double * ground_speed_kmh,
    double * course_over_ground_deg,
    time_t * UTC_time) [override], [virtual]
```

Implements [PvtInterface](#).

#### 10.340.2.9 `get_left_block()`

```
gr::basic_block_sptr Rtklib_Pvt::get_left_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.340.2.10 `get_right_block()`

```
gr::basic_block_sptr Rtklib_Pvt::get_right_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.340.2.11 `implementation()`

```
std::string Rtklib_Pvt::implementation () [inline], [override], [virtual]
```

Returns "RTKLIB\_PVT".

Implements [GNSSBlockInterface](#).

Definition at line 189 of file [rtklib\\_pvt.h](#).

#### 10.340.2.12 `item_size()`

```
size_t Rtklib_Pvt::item_size () [inline], [override], [virtual]
```

All blocks must have an `item_size()` function implementation.

Implements [GNSSBlockInterface](#).

Definition at line 211 of file [rtklib\\_pvt.h](#).

#### 10.340.2.13 `reset()`

```
void Rtklib_Pvt::reset () [inline], [override], [virtual]
```

Implements [PvtInterface](#).

Definition at line 205 of file [rtklib\\_pvt.h](#).

#### 10.340.2.14 `role()`

```
std::string Rtklib_Pvt::role () [inline], [override], [virtual]
```

Implements [GNSSBlockInterface](#).

Definition at line 183 of file [rtklib\\_pvt.h](#).

## 10.341.1 Detailed Description

This class implements a block that computes the PVT solution using the RTKLIB integrated library.

Definition at line 82 of file [rtklib\\_pvt\\_gs.h](#).

## 10.341.2 Constructor & Destructor Documentation

### 10.341.2.1 ~rtklib\_pvt\_gs()

```
rtklib_pvt_gs::~~rtklib_pvt_gs ()
```

Default destructor.

## 10.341.3 Member Function Documentation

### 10.341.3.1 clear\_ephemeris()

```
void rtklib_pvt_gs::clear_ephemeris ()
```

Clear all ephemeris information and the almanacs for GPS and Galileo.

### 10.341.3.2 get\_beidou\_dnav\_almanac\_map()

```
std::map< int, Beidou\_Dnav\_Almanac > rtklib_pvt_gs::get_beidou_dnav_almanac_map () const
```

Get latest set of BeiDou DNAV almanac from PVT block.

### 10.341.3.3 get\_beidou\_dnav\_ephemeris\_map()

```
std::map< int, Beidou\_Dnav\_Ephemeris > rtklib_pvt_gs::get_beidou_dnav_ephemeris_map () const
```

Get latest set of BeiDou DNAV ephemeris from PVT block.

### 10.341.3.4 get\_galileo\_almanac\_map()

```
std::map< int, Galileo\_Almanac > rtklib_pvt_gs::get_galileo_almanac_map () const
```

Get latest set of Galileo almanac from PVT block.

### 10.341.3.5 get\_galileo\_ephemeris\_map()

```
std::map< int, Galileo\_Ephemeris > rtklib_pvt_gs::get_galileo_ephemeris_map () const
```

Get latest set of Galileo ephemeris from PVT block.

### 10.341.3.6 get\_gps\_almanac\_map()

```
std::map< int, Gps\_Almanac > rtklib_pvt_gs::get_gps_almanac_map () const
```

Get latest set of GPS almanac from PVT block.

### 10.341.3.7 get\_gps\_ephemeris\_map()

```
std::map< int, Gps\_Ephemeris > rtklib_pvt_gs::get_gps_ephemeris_map () const
```

Get latest set of GPS ephemeris from PVT block.

#### 10.341.3.8 `get_latest_PVT()`

```
bool rtklib_pvt_gs::get_latest_PVT (  
    double * longitude_deg,  
    double * latitude_deg,  
    double * height_m,  
    double * ground_speed_kmh,  
    double * course_over_ground_deg,  
    time_t * UTC_time) const
```

Get the latest Position WGS84 [deg], Ground Velocity, Course over Ground, and UTC Time, if available.

#### 10.341.3.9 `work()`

```
int rtklib_pvt_gs::work (  
    int noutput_items,  
    gr_vector_const_void_star & input_items,  
    gr_vector_void_star & output_items)
```

PVT Signal Processing.

`int sbsion_t::iodi`

Definition at line 639 of file [rtklib.h](#).

### 10.354.2.3 nignp

```
int sbsion_t::nignp
```

Definition at line 640 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.355 sbslcorr\_t Struct Reference

Collaboration diagram for sbslcorr\_t:

### Public Attributes

- [gtime\\_t t0](#)
- int [iode](#)
- double [dpos](#) [3]
- double [dvel](#) [3]
- double [daf0](#)
- double [daf1](#)

### 10.355.1 Detailed Description

Definition at line 592 of file [rtklib.h](#).

### 10.355.2 Member Data Documentation

#### 10.355.2.1 daf0

```
double sbslcorr_t::daf0
```

Definition at line 598 of file [rtklib.h](#).

#### 10.355.2.2 daf1

```
double sbslcorr_t::daf1
```

Definition at line 598 of file [rtklib.h](#).

#### 10.355.2.3 dpos

```
double sbslcorr_t::dpos[3]
```

Definition at line 596 of file [rtklib.h](#).

#### 10.355.2.4 dvel

```
double sbslcorr_t::dvel[3]
```

Definition at line 597 of file [rtklib.h](#).

#### 10.355.2.5 iode

```
int sbslcorr_t::iode
```

Definition at line 595 of file [rtklib.h](#).

#### 10.355.2.6 t0

```
ptime_t sbslcorr_t::t0
```

Definition at line 594 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.356 sbsmsg\_t Struct Reference

Collaboration diagram for sbsmsg\_t:

### Public Attributes

- int [week](#)
- int [tow](#)
- int [prn](#)
- unsigned char [msg](#) [29]

### 10.356.1 Detailed Description

Definition at line 565 of file [rtklib.h](#).

### 10.356.2 Member Data Documentation

#### 10.356.2.1 msg

```
unsigned char sbsmsg_t::msg[29]
```

Definition at line 569 of file [rtklib.h](#).

#### 10.356.2.2 prn

```
int sbsmsg_t::prn
```

Definition at line 568 of file [rtklib.h](#).

#### 10.356.2.3 tow

```
int sbsmsg_t::tow
```

Definition at line 567 of file [rtklib.h](#).

#### 10.356.2.4 week

```
int sbsmsg_t::week
```

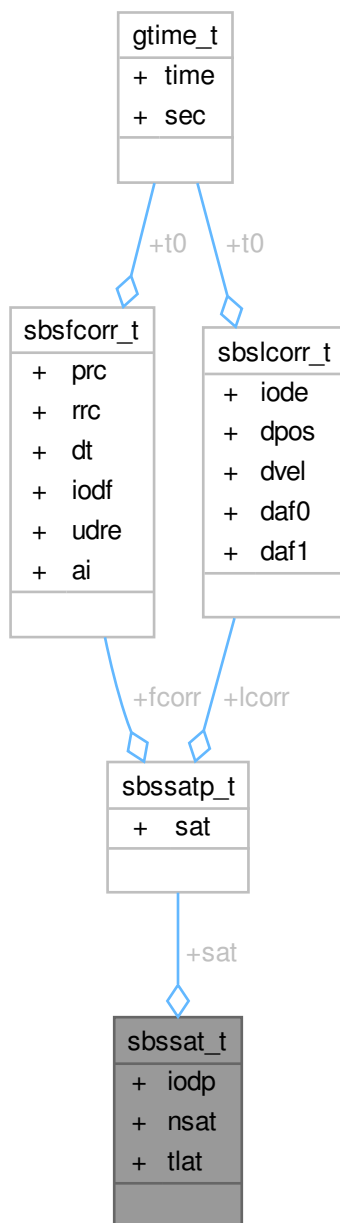

Definition at line 567 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.357 sbssat\_t Struct Reference

Collaboration diagram for sbssat\_t:

### Public Attributes

- int `iodp`
- int `nsat`
- int `tlat`
- `sbssatp_t sat` [MAXSAT]

### 10.357.1 Detailed Description

Definition at line 610 of file [rtklib.h](#).

### 10.357.2 Member Data Documentation

#### 10.357.2.1 iodp

```
int sbssat_t::iodp
```

Definition at line 612 of file [rtklib.h](#).

#### 10.357.2.2 nsat

```
int sbssat_t::nsat
```

Definition at line 613 of file [rtklib.h](#).

#### 10.357.2.3 sat

```
sbssatp_t sbssat_t::sat [MAXSAT]
```

Definition at line 615 of file [rtklib.h](#).

#### 10.357.2.4 tlat

```
int sbssat_t::tlat
```

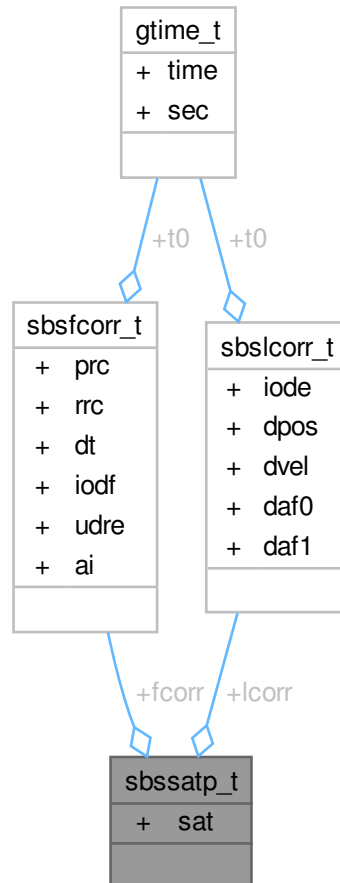

Definition at line 614 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.358 sbssatp\_t Struct Reference

Collaboration diagram for sbssatp\_t:

### Public Attributes

- int `sat`
- `sbsfcorr_t` `fcorr`
- `sbslcorr_t` `lcorr`

### 10.358.1 Detailed Description

Definition at line 602 of file `rtklib.h`.

### 10.358.2 Member Data Documentation

#### 10.358.2.1 fcorr

`sbsfcorr_t` `sbssatp_t::fcorr`

Definition at line 605 of file `rtklib.h`.

### 10.358.2.2 lcorr

`sbslcorr_t` `sbssatp_t::lcorr`

Definition at line 606 of file [rtklib.h](#).

### 10.358.2.3 sat

`int` `sbssatp_t::sat`

Definition at line 604 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.359 sdr\_gnss\_packet\_t Struct Reference

Collaboration diagram for `sdr_gnss_packet_t`:

## 10.367 short\_x2\_to\_cshort Class Reference

This class adapts two short streams into a `std::complex<short>` stream.

```
#include <short_x2_to_cshort.h>
```

Inheritance diagram for `short_x2_to_cshort`:

Collaboration diagram for `short_x2_to_cshort`:

### Public Member Functions

- `int` **work** (`int` noutput\_items, `gr_vector_const_void_star` &input\_items, `gr_vector_void_star` &output\_items)

### Friends

- `short_x2_to_cshort_sptr` **make\_short\_x2\_to\_cshort** ()

### 10.367.1 Detailed Description

This class adapts two short streams into a `std::complex<short>` stream.

Definition at line 40 of file [short\\_x2\\_to\\_cshort.h](#).

The documentation for this class was generated from the following file:

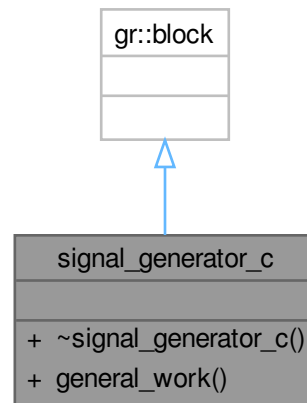

- [short\\_x2\\_to\\_cshort.h](#)

## 10.368 signal\_generator\_c Class Reference

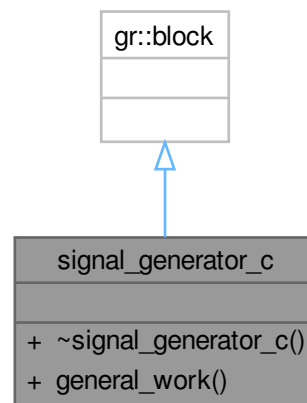

This class generates synthesized GNSS signal.

```
#include <signal_generator_c.h>
```

Inheritance diagram for signal\_generator\_c:

Collaboration diagram for signal\_generator\_c:

### Public Member Functions

- `int` **general\_work** (`int` noutput\_items, `gr_vector_int` &ninput\_items, `gr_vector_const_void_star` &input\_items, `gr_vector_void_star` &output\_items)

### Friends

- `signal_generator_c_sptr` [signal\\_make\\_generator\\_c](#) (`const` `std::vector`< `std::string` > &signal1, `const` `std::vector`< `std::string` > &system, `const` `std::vector`< `unsigned int` > &PRN, `const` `std::vector`< `float` > &CN0↵

```
_dB, const std::vector< float > &doppler_Hz, const std::vector< unsigned int > &delay_chips, const std::vector< unsigned int > &delay_sec, bool data_flag, bool noise_flag, unsigned int fs_in, unsigned int vector_length, float BW_BB)
```

*Return a shared\_ptr to a new instance of gen\_source.*

### 10.368.1 Detailed Description

This class generates synthesized GNSS signal.

See also

[gen\\_source](#) for a version that subclasses gr\_block.

Definition at line 58 of file [signal\\_generator\\_c.h](#).

### 10.368.2 Friends And Related Symbol Documentation

#### 10.368.2.1 signal\_make\_generator\_c

```
signal_generator_c_sptr signal_make_generator_c (
    const std::vector< std::string > & signal1,
    const std::vector< std::string > & system,
    const std::vector< unsigned int > & PRN,
    const std::vector< float > & CNO_dB,
    const std::vector< float > & doppler_Hz,
    const std::vector< unsigned int > & delay_chips,
    const std::vector< unsigned int > & delay_sec,
    bool data_flag,
    bool noise_flag,
    unsigned int fs_in,
    unsigned int vector_length,
    float BW_BB) [friend]
```

Return a shared\_ptr to a new instance of gen\_source.

To avoid accidental use of raw pointers, gen\_source's constructor is private. signal\_make\_generator\_c is the public interface for creating new instances.

The documentation for this class was generated from the following file:

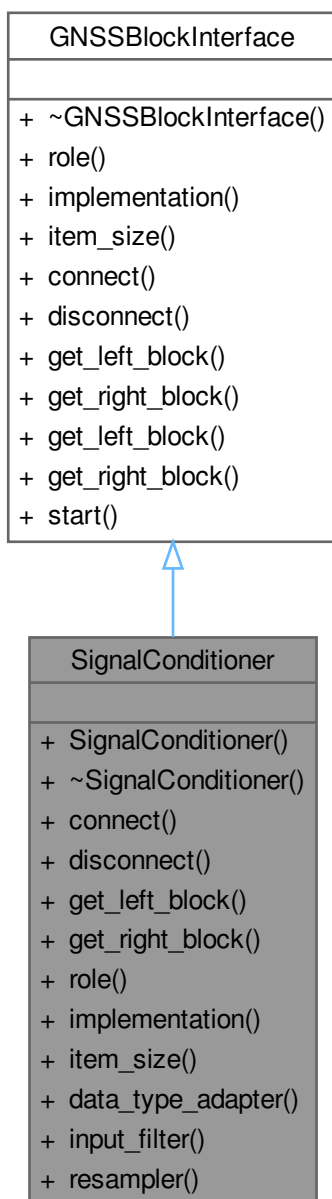

- [signal\\_generator\\_c.h](#)

## 10.369 SignalConditioner Class Reference

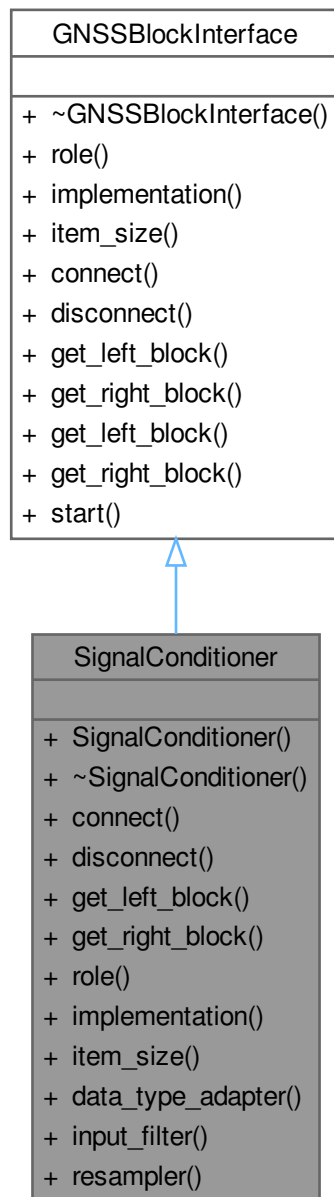

This class wraps blocks to change data\_type\_adapter, input\_filter and resampler to be applied to the input flow of sampled signal.

```
#include <signal_conditioner.h>
```

Inheritance diagram for SignalConditioner:

Collaboration diagram for SignalConditioner:

### 10.371.1 Detailed Description

Definition at line 28 of file [signal\\_source\\_base.h](#).

### 10.371.2 Constructor & Destructor Documentation

#### 10.371.2.1 SignalSourceBase()

```
SignalSourceBase::SignalSourceBase (
    ConfigurationInterface const * configuration,
    std::string role,
    std::string impl) [protected]
```

Constructor.

### 10.371.3 Member Function Documentation

#### 10.371.3.1 decode\_item\_type()

```
size_t SignalSourceBase::decode_item_type (
    std::string const & item_type,
    bool * is_interleaved = nullptr,
    bool throw_on_error = false) [protected]
```

utility for decoding passed ".item\_type" values

#### Parameters

in	<i>item_type</i>	- user provided string, should be one of the known types
out	<i>is_interleaved</i>	- if non-null, the pointed to memory is updated with whether the data is interleaved I/Q (e.g., ishort)
in	<i>throw_on_error</i>	- if true, throw an exception if the string does not represent a known type

#### Returns

the size in bytes of the passed type

#### 10.371.3.2 get\_left\_block()

```
gr::basic_block_sptr SignalSourceBase::get_left_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.371.3.3 getRfChannels()

```
size_t SignalSourceBase::getRfChannels () const [override], [virtual]
```

Implements [SignalSourceInterface](#).

#### 10.371.3.4 implementation()

```
std::string SignalSourceBase::implementation () [final], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.371.3.5 role()

```
std::string SignalSourceBase::role () [final], [virtual]
```

Implements [GNSSBlockInterface](#).

The documentation for this class was generated from the following file:

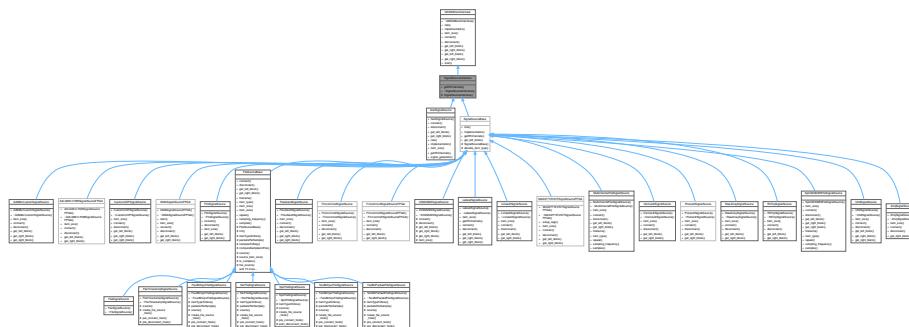

- `signal_source_base.h`

## 10.372 SignalSourceInterface Class Reference

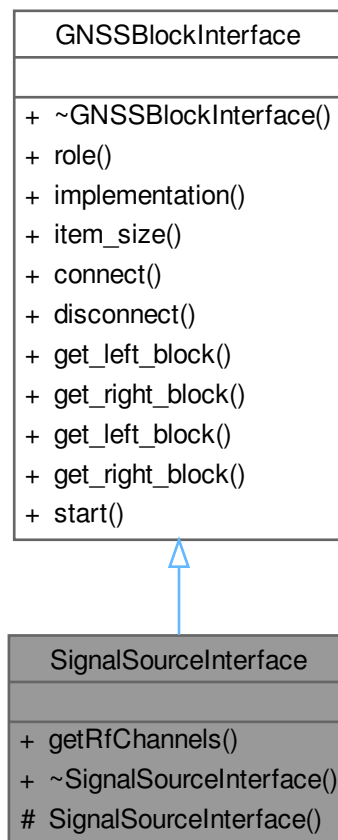

This abstract class represents an interface to signal\_source GNSS block.

```
#include <signal_source_interface.h>
```

### 10.374.1 Detailed Description

Definition at line [819](#) of file [rtklib.h](#).

### 10.374.2 Member Data Documentation

#### 10.374.2.1 age

`float sol_t::age`

Definition at line [831](#) of file [rtklib.h](#).

#### 10.374.2.2 dtr

```
double sol_t::dtr[6]
```

Definition at line 827 of file [rtklib.h](#).

#### 10.374.2.3 ns

```
unsigned char sol_t::ns
```

Definition at line 830 of file [rtklib.h](#).

#### 10.374.2.4 qr

```
float sol_t::qr[6]
```

Definition at line 824 of file [rtklib.h](#).

#### 10.374.2.5 ratio

```
float sol_t::ratio
```

Definition at line 832 of file [rtklib.h](#).

#### 10.374.2.6 rr

```
double sol_t::rr[6]
```

Definition at line 822 of file [rtklib.h](#).

#### 10.374.2.7 stat

```
unsigned char sol_t::stat
```

Definition at line 829 of file [rtklib.h](#).

#### 10.374.2.8 thres

```
float sol_t::thres
```

Definition at line 833 of file [rtklib.h](#).

#### 10.374.2.9 time

```
gtime_t sol_t::time
```

Definition at line 821 of file [rtklib.h](#).

#### 10.374.2.10 type

```
unsigned char sol_t::type
```

Definition at line 828 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.375 solbuf\_t Struct Reference

Collaboration diagram for solbuf\_t:

### Public Attributes

- int `n`
- int `nmax`
- int `cyclic`

### 10.375.1 Detailed Description

Definition at line 837 of file [rtklib.h](#).

### 10.375.2 Member Data Documentation

#### 10.375.2.1 buff

```
unsigned char solbuf_t::buff[MAXSOLMSG+1]
```

Definition at line 845 of file [rtklib.h](#).

#### 10.375.2.2 cyclic

```
int solbuf_t::cyclic
```

Definition at line 840 of file [rtklib.h](#).

#### 10.375.2.3 data

```
sol\_t* solbuf_t::data
```

Definition at line 843 of file [rtklib.h](#).

#### 10.375.2.4 end

```
int solbuf_t::end
```

Definition at line 841 of file [rtklib.h](#).

#### 10.375.2.5 n

```
int solbuf_t::n
```

Definition at line 839 of file [rtklib.h](#).

#### 10.375.2.6 nb

```
int solbuf_t::nb
```

Definition at line 846 of file [rtklib.h](#).

#### 10.375.2.7 nmax

```
int solbuf_t::nmax
```

Definition at line 839 of file [rtklib.h](#).

#### 10.375.2.8 rb

```
double solbuf_t::rb[3]
```

Definition at line 844 of file [rtklib.h](#).

#### 10.375.2.9 start

```
int solbuf_t::start
```

Definition at line 841 of file [rtklib.h](#).

### 10.375.2.10 time

`gtime_t solbuf_t::time`

Definition at line 842 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.376 solopt\_t Struct Reference

Collaboration diagram for `solo_t`:

solo_t

## 10.376.1 Detailed Description

Definition at line 1007 of file [rtklib.h](#).

## 10.376.2 Member Data Documentation

### 10.376.2.1 datum

```
int solopt_t::datum
```

Definition at line 1016 of file [rtklib.h](#).

### 10.376.2.2 degf

```
int solopt_t::degf
```

Definition at line 1013 of file [rtklib.h](#).

### 10.376.2.3 geoid

```
int solopt_t::geoid
```

Definition at line 1018 of file [rtklib.h](#).

### 10.376.2.4 height

```
int solopt_t::height
```

Definition at line 1017 of file [rtklib.h](#).

### 10.376.2.5 maxsolstd

```
double solopt_t::maxsolstd
```

Definition at line 1026 of file [rtklib.h](#).

### 10.376.2.6 nmeaintv

```
double solopt_t::nmeaintv[2]
```

Definition at line 1022 of file [rtklib.h](#).

### 10.376.2.7 outhead

```
int solopt_t::outhead
```

Definition at line 1014 of file [rtklib.h](#).

### 10.376.2.8 outopt

```
int solopt_t::outopt
```

Definition at line 1015 of file [rtklib.h](#).

### 10.376.2.9 posf

```
int solopt_t::posf
```

Definition at line 1009 of file [rtklib.h](#).

### 10.376.2.10 prog

```
char solopt_t::prog[64]
```

Definition at line 1025 of file [rtklib.h](#).

### 10.376.2.11 sep

```
char solopt_t::sep[64]
```

Definition at line 1024 of file [rtklib.h](#).

**10.376.2.12 solstatic**

```
int solopt_t::solstatic
```

Definition at line 1019 of file [rtklib.h](#).

**10.376.2.13 sstat**

```
int solopt_t::sstat
```

Definition at line 1020 of file [rtklib.h](#).

**10.376.2.14 timef**

```
int solopt_t::timef
```

Definition at line 1011 of file [rtklib.h](#).

**10.376.2.15 times**

```
int solopt_t::times
```

Definition at line 1010 of file [rtklib.h](#).

**10.376.2.16 timeu**

```
int solopt_t::timeu
```

Definition at line 1012 of file [rtklib.h](#).

**10.376.2.17 trace**

```
int solopt_t::trace
```

Definition at line 1021 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.377 solstat\_t Struct Reference

Collaboration diagram for solstat\_t:

### Public Attributes

- [gtime\\_t time](#)
- unsigned char [sat](#)

### 10.377.1 Detailed Description

Definition at line 850 of file [rtklib.h](#).

## 10.377.2 Member Data Documentation

### 10.377.2.1 az

`float solstat_t::az`

Definition at line 855 of file [rtklib.h](#).

### 10.377.2.2 el

`float solstat_t::el`

Definition at line 855 of file [rtklib.h](#).

### 10.377.2.3 flag

`unsigned char solstat_t::flag`

Definition at line 858 of file [rtklib.h](#).

### 10.377.2.4 frq

`unsigned char solstat_t::frq`

Definition at line 854 of file [rtklib.h](#).

### 10.377.2.5 lock

`unsigned short solstat_t::lock`

Definition at line 860 of file [rtklib.h](#).

### 10.377.2.6 outc

`unsigned short solstat_t::outc`

Definition at line 861 of file [rtklib.h](#).

### 10.377.2.7 rejc

`unsigned short solstat_t::rejc`

Definition at line 863 of file [rtklib.h](#).

### 10.377.2.8 resc

`float solstat_t::resc`

Definition at line 857 of file [rtklib.h](#).

### 10.377.2.9 resp

`float solstat_t::resp`

Definition at line 856 of file [rtklib.h](#).

### 10.377.2.10 sat

`unsigned char solstat_t::sat`

Definition at line 853 of file [rtklib.h](#).

### 10.377.2.11 slipc

`unsigned short solstat_t::slipc`

Definition at line 862 of file [rtklib.h](#).

### 10.377.2.12 snr

`unsigned char solstat_t::snr`

Definition at line 859 of file [rtklib.h](#).

### 10.377.2.13 time

`gtime_t solstat_t::time`

Definition at line 852 of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.378 solstatbuf\_t Struct Reference

Collaboration diagram for solstatbuf\_t:

## Public Attributes

- int [n](#)
- int [nmax](#)
- [solstat\\_t](#) \* [data](#)

### 10.378.1 Detailed Description

Definition at line [867](#) of file [rtklib.h](#).

### 10.378.2 Member Data Documentation

#### 10.378.2.1 data

```
solstat\_t* solstatbuf_t::data
```

Definition at line [870](#) of file [rtklib.h](#).

#### 10.378.2.2 n

```
int solstatbuf_t::n
```

Definition at line [869](#) of file [rtklib.h](#).

#### 10.378.2.3 nmax

```
int solstatbuf_t::nmax
```

Definition at line [869](#) of file [rtklib.h](#).

The documentation for this struct was generated from the following file:

- [rtklib.h](#)

## 10.379 SpirFileSignalSource Class Reference

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

```
#include <spir_file_signal_source.h>
```

## 10.379.1 Detailed Description

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

Definition at line 40 of file [spir\\_file\\_signal\\_source.h](#).

## 10.379.2 Member Function Documentation

### 10.379.2.1 [create\\_file\\_source\\_hook\(\)](#)

void [SpirFileSignalSource::create\\_file\\_source\\_hook](#) () [override], [protected], [virtual]  
Reimplemented from [FileSourceBase](#).

### 10.379.2.2 [itemTypeToSize\(\)](#)

std::tuple< size\_t, bool > [SpirFileSignalSource::itemTypeToSize](#) () [override], [protected], [virtual]

Compute the item size, from the [item\\_type\(\)](#). Subclasses may constrain types that don't make.

Reimplemented from [FileSourceBase](#).

### 10.379.2.3 [post\\_disconnect\\_hook\(\)](#)

void [SpirFileSignalSource::post\\_disconnect\\_hook](#) (  
gr::top\_block\_sptr top\_block) [override], [protected], [virtual]

Reimplemented from [FileSourceBase](#).

### 10.379.2.4 [pre\\_connect\\_hook\(\)](#)

void [SpirFileSignalSource::pre\\_connect\\_hook](#) (  
gr::top\_block\_sptr top\_block) [override], [protected], [virtual]

Reimplemented from [FileSourceBase](#).

#### 10.379.2.5 source()

```
gnss_shared_ptr< gr::block > SpirFileSignalSource::source () const [override], [protected],  
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.

Reimplemented from [FileSourceBase](#).

The documentation for this class was generated from the following file:

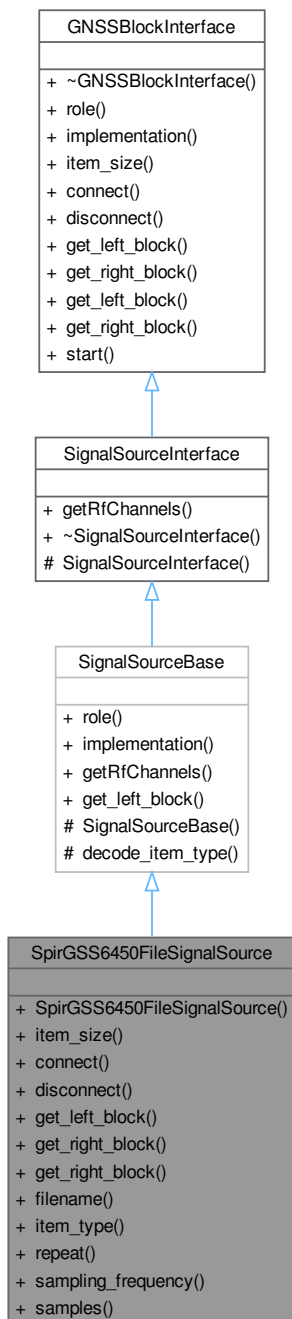

- [spir\\_file\\_signal\\_source.h](#)

## 10.380 SpirGSS6450FileSignalSource Class Reference

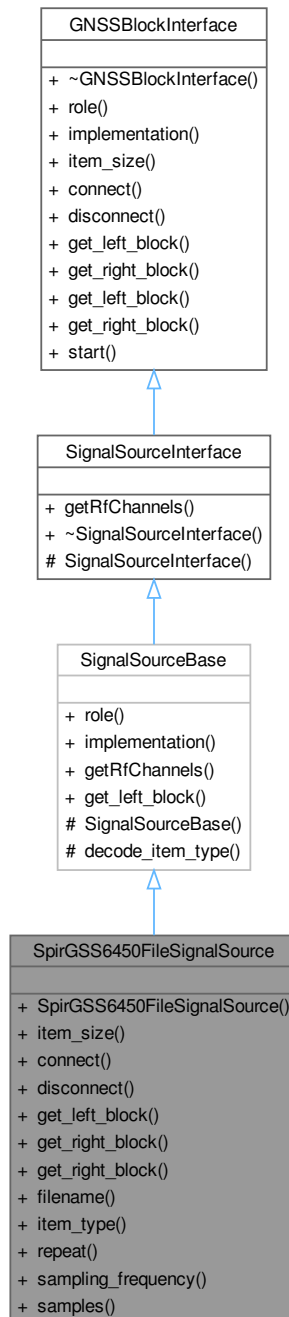

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

```
#include <spir_gss6450_file_signal_source.h>
```

Inheritance diagram for SpirGSS6450FileSignalSource:

## 10.380.1 Detailed Description

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).  
Definition at line 53 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

## 10.380.2 Member Function Documentation

### 10.380.2.1 connect()

```
void SpirGSS6450FileSignalSource::connect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.380.2.2 disconnect()

```
void SpirGSS6450FileSignalSource::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

### 10.380.2.3 filename()

```
std::string SpirGSS6450FileSignalSource::filename () const [inline]
```

Definition at line 70 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

### 10.380.2.4 get\_left\_block()

```
gr::basic_block_sptr SpirGSS6450FileSignalSource::get_left_block () [override], [virtual]
```

Reimplemented from [SignalSourceBase](#).

**10.380.2.5 get\_right\_block()** [1/2]

gr::basic\_block\_sptr SpirGSS6450FileSignalSource::get\_right\_block () [override], [virtual]  
Implements [GNSSBlockInterface](#).

**10.380.2.6 get\_right\_block()** [2/2]

gr::basic\_block\_sptr SpirGSS6450FileSignalSource::get\_right\_block (  
    int *RF\_channel*) [override], [virtual]  
Reimplemented from [GNSSBlockInterface](#).

**10.380.2.7 item\_size()**

size\_t SpirGSS6450FileSignalSource::item\_size () [inline], [override], [virtual]  
Implements [GNSSBlockInterface](#).  
Definition at line 59 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

**10.380.2.8 item\_type()**

std::string SpirGSS6450FileSignalSource::item\_type () const [inline]  
Definition at line 75 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

**10.380.2.9 repeat()**

bool SpirGSS6450FileSignalSource::repeat () const [inline]  
Definition at line 80 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

**10.380.2.10 samples()**

uint64\_t SpirGSS6450FileSignalSource::samples () const [inline]  
Definition at line 90 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).

**10.380.2.11 sampling\_frequency()**

int64\_t SpirGSS6450FileSignalSource::sampling\_frequency () const [inline]  
Definition at line 85 of file [spir\\_gss6450\\_file\\_signal\\_source.h](#).  
The documentation for this class was generated from the following file:

- [spir\\_gss6450\\_file\\_signal\\_source.h](#)

## 10.387 StringConverter Class Reference

Class that interprets the contents of a string and converts it into different types.

```
#include <string_converter.h>
```

Collaboration diagram for StringConverter:

### Public Member Functions

- `bool convert (const std::string &value, bool default_value)`
- `int64_t convert (const std::string &value, int64_t default_value)`
- `uint64_t convert (const std::string &value, uint64_t default_value)`
- `int32_t convert (const std::string &value, int32_t default_value)`
- `uint32_t convert (const std::string &value, uint32_t default_value)`
- `int16_t convert (const std::string &value, int16_t default_value)`
- `uint16_t convert (const std::string &value, uint16_t default_value)`
- `float convert (const std::string &value, float default_value)`
- `double convert (const std::string &value, double default_value)`

#### 10.387.1 Detailed Description

Class that interprets the contents of a string and converts it into different types.

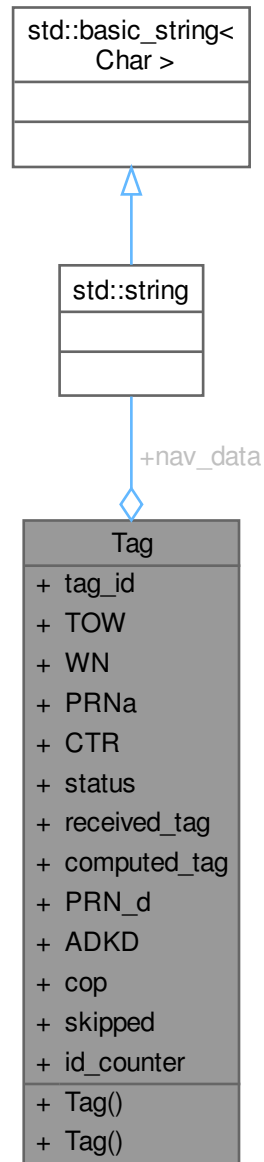

Definition at line 35 of file [string\\_converter.h](#).

The documentation for this class was generated from the following file:

- [string\\_converter.h](#)

## 10.388 Tag Class Reference

Collaboration diagram for Tag:

### Public Types

- enum `e_verification_status` { `SUCCESS`, `FAIL`, `UNVERIFIED` }

### Public Member Functions

- `Tag` (const `MACK_tag_and_info` &MTI, uint32\_t TOW, uint32\_t WN, uint32\_t PRNa, uint8\_t CTR)
- `Tag` (const `MACK_message` &mack)

**Public Attributes**

- const uint32\_t [tag\\_id](#)
- uint32\_t [TOW](#)
- uint32\_t [WN](#)
- uint32\_t [PRNa](#)
- uint8\_t [CTR](#)
- e\_verification\_status [status](#)

## 10.389 Tcp\_Communication Class Reference

TCP communication class.

```
#include <tcp_communication.h>
```

Collaboration diagram for Tcp\_Communication:

Tcp_Communication
<ul style="list-style-type: none"> <li>+ Tcp_Communication()</li> <li>+ ~Tcp_Communication()</li> <li>+ listen_tcp_connection()</li> <li>+ send_receive_tcp_packet_galileo_e1()</li> <li>+ send_receive_tcp_packet_gps_l1_ca()</li> <li>+ close_tcp_connection()</li> </ul>

### Public Member Functions

- int **listen\_tcp\_connection** (size\_t d\_port\_, size\_t d\_port\_ch0\_)
- void **send\_receive\_tcp\_packet\_galileo\_e1** (boost::array< float, NUM\_TX\_VARIABLES\_GALILEO\_E1 > buf, [Tcp\\_Packet\\_Data](#) \*tcp\_data\_)
- void **send\_receive\_tcp\_packet\_gps\_l1\_ca** (boost::array< float, NUM\_TX\_VARIABLES\_GPS\_L1\_CA > buf, [Tcp\\_Packet\\_Data](#) \*tcp\_data\_)
- void **close\_tcp\_connection** (size\_t d\_port\_)

### 10.389.1 Detailed Description

TCP communication class.

Definition at line 44 of file [tcp\\_communication.h](#).

The documentation for this class was generated from the following file:

- [tcp\\_communication.h](#)

## 10.390 Tcp\_Packet\_Data Class Reference

Class that implements a TCP data packet.

```
#include <tcp_packet_data.h>
```

Collaboration diagram for Tcp\_Packet\_Data:

Tcp_Packet_Data
+ proc_pack_code_error
+ proc_pack_carr_error
+ proc_pack_carrier_doppler_hz
+ Tcp_Packet_Data()
+ ~Tcp_Packet_Data()

### Public Attributes

- float [proc\\_pack\\_code\\_error](#) = 0.0
- float [proc\\_pack\\_carr\\_error](#) = 0.0
- float [proc\\_pack\\_carrier\\_doppler\\_hz](#) = 0.0

### 10.390.1 Detailed Description

Class that implements a TCP data packet.

Definition at line 30 of file [tcp\\_packet\\_data.h](#).

### 10.390.2 Member Data Documentation

#### 10.390.2.1 proc\_pack\_carr\_error

```
float Tcp_Packet_Data::proc_pack_carr_error = 0.0
```

Definition at line 36 of file [tcp\\_packet\\_data.h](#).

#### 10.390.2.2 proc\_pack\_carrier\_doppler\_hz

```
float Tcp_Packet_Data::proc_pack_carrier_doppler_hz = 0.0
```

Definition at line 37 of file [tcp\\_packet\\_data.h](#).

#### 10.390.2.3 proc\_pack\_code\_error

```
float Tcp_Packet_Data::proc_pack_code_error = 0.0
```

Definition at line 35 of file [tcp\\_packet\\_data.h](#).

The documentation for this class was generated from the following file:

- [tcp\\_packet\\_data.h](#)

## 10.391 tcp\_t Struct Reference

Collaboration diagram for tcp\_t:

tcp_t
+ state
+ saddr
+ port
+ addr
+ sock
+ tcon
+ tact
+ tdis

### Public Attributes

- int [state](#)
- char [saddr](#) [256]

## 10.400 Tlm\_CRC\_Stats Class Reference

Class that computes the telemetry CRC statistics.

```
#include <tlm_crc_stats.h>
```

Collaboration diagram for Tlm\_CRC\_Stats:

### Public Member Functions

- void [initialize](#) (std::string dump\_crc\_stats\_filename)  
*Initialize the telemetry CRC statistics.*
- bool [set\\_channel](#) (int32\_t channel)  
*Initialize the channel number and output file.*
- void [update\\_CRC\\_stats](#) (bool CRC)  
*Update the CRC statistics.*

### 10.400.1 Detailed Description

Class that computes the telemetry CRC statistics.

Definition at line 32 of file [tlm\\_crc\\_stats.h](#).

### 10.400.2 Member Function Documentation

#### 10.400.2.1 initialize()

```
void Tlm_CRC_Stats::initialize (
    std::string dump_crc_stats_filename)
```

Initialize the telemetry CRC statistics.

#### 10.400.2.2 set\_channel()

```
bool Tlm_CRC_Stats::set_channel (
    int32_t channel)
```

Initialize the channel number and output file.

### 10.400.2.3 update\_CRC\_stats()

```
void Tlm_CRC_Stats::update_CRC_stats (
    bool CRC)
```

Update the CRC statistics.

The documentation for this class was generated from the following file:

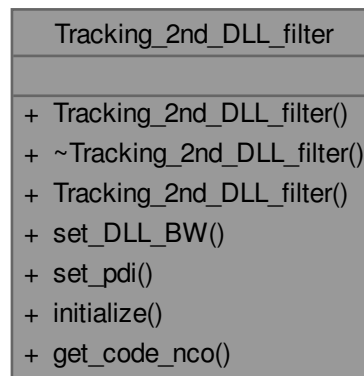

- [tlm\\_crc\\_stats.h](#)

## 10.401 Tracking\_2nd\_DLL\_filter Class Reference

This class implements a 2nd order DLL filter for code tracking loop.

```
#include <tracking_2nd_DLL_filter.h>
```

Collaboration diagram for Tracking\_2nd\_DLL\_filter:

### Public Member Functions

- **Tracking\_2nd\_DLL\_filter** (float pdi\_code)
- void **set\_DLL\_BW** (float dll\_bw\_hz)  
*Set DLL filter bandwidth [Hz].*
- void **set\_pdi** (float pdi\_code)  
*Set Summation interval for code [s].*
- void **initialize** ()  
*Start tracking with acquisition information.*
- float **get\_code\_nco** (float DLL\_discriminator)  
*Numerically controlled oscillator.*

### 10.401.1 Detailed Description

This class implements a 2nd order DLL filter for code tracking loop.

The algorithm is described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S. H. Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007, Applied and Numerical Harmonic Analysis.

Definition at line 40 of file [tracking\\_2nd\\_DLL\\_filter.h](#).

## 10.401.2 Member Function Documentation

### 10.401.2.1 `get_code_nco()`

```
float Tracking_2nd_DLL_filter::get_code_nco (
    float DLL_discriminator)
```

Numerically controlled oscillator.

### 10.401.2.2 `initialize()`

```
void Tracking_2nd_DLL_filter::initialize ()
```

Start tracking with acquisition information.

### 10.401.2.3 `set_DLL_BW()`

```
void Tracking_2nd_DLL_filter::set_DLL_BW (
    float dll_bw_hz)
```

Set DLL filter bandwidth [Hz].

### 10.401.2.4 `set_pdi()`

```
void Tracking_2nd_DLL_filter::set_pdi (
    float pdi_code)
```

Set Summation interval for code [s].

The documentation for this class was generated from the following file:

- [tracking\\_2nd\\_DLL\\_filter.h](#)

## 10.402 Tracking\_2nd\_PLL\_filter Class Reference

This class implements a 2nd order PLL filter for carrier tracking loop.

```
#include <tracking_2nd_PLL_filter.h>
```

Collaboration diagram for Tracking\_2nd\_PLL\_filter:

Tracking_2nd_PLL_filter
<ul style="list-style-type: none"> <li>+ Tracking_2nd_PLL_filter()</li> <li>+ ~Tracking_2nd_PLL_filter()</li> <li>+ Tracking_2nd_PLL_filter()</li> <li>+ set_PLL_BW()</li> <li>+ set_pdi()</li> <li>+ initialize()</li> <li>+ get_carrier_nco()</li> </ul>

### Public Member Functions

- **Tracking\_2nd\_PLL\_filter** (float pdi\_carr)
- void [set\\_PLL\\_BW](#) (float pll\_bw\_hz)  
Set PLL loop bandwidth [Hz].

- void **set\_pdi** (float pdi\_carr)  
*Set Summation interval for code [s].*
- void **initialize** ()
- float **get\_carrier\_nco** (float PLL\_discriminator)

### 10.402.1 Detailed Description

This class implements a 2nd order PLL filter for carrier tracking loop.

The algorithm is described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S. H. Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007, Applied and Numerical Harmonic Analysis.

Definition at line 39 of file [tracking\\_2nd\\_PLL\\_filter.h](#).

### 10.402.2 Member Function Documentation

#### 10.402.2.1 set\_pdi()

```
void Tracking_2nd_PLL_filter::set_pdi (
    float pdi_carr)
```

Set Summation interval for code [s].

#### 10.402.2.2 set\_PLL\_BW()

```
void Tracking_2nd_PLL_filter::set_PLL_BW (
    float pll_bw_hz)
```

Set PLL loop bandwidth [Hz].

The documentation for this class was generated from the following file:

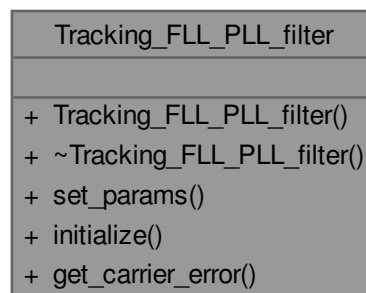

- [tracking\\_2nd\\_PLL\\_filter.h](#)

## 10.403 Tracking\_FLL\_PLL\_filter Class Reference

This class implements a hybrid FLL and PLL filter for tracking carrier loop.

```
#include <tracking_FLL_PLL_filter.h>
```

Collaboration diagram for Tracking\_FLL\_PLL\_filter:

### Public Member Functions

- void **set\_params** (float fll\_bw\_hz, float pll\_bw\_hz, int order)
- void **initialize** (float d\_acq\_carrier\_doppler\_hz)
- float **get\_carrier\_error** (float FLL\_discriminator, float PLL\_discriminator, float correlation\_time\_s)

### 10.403.1 Detailed Description

This class implements a hybrid FLL and PLL filter for tracking carrier loop.

Definition at line 29 of file [tracking\\_FLL\\_PLL\\_filter.h](#).

The documentation for this class was generated from the following file:

- [tracking\\_FLL\\_PLL\\_filter.h](#)

## 10.404 Tracking\_loop\_filter Class Reference

This class implements a generic 1st, 2nd or 3rd order loop filter.

#include <tracking\_loop\_filter.h>

Collaboration diagram for Tracking\_loop\_filter:

Tracking_loop_filter
<ul style="list-style-type: none"> <li>+ Tracking_loop_filter()</li> <li>+ ~Tracking_loop_filter()</li> <li>+ Tracking_loop_filter()</li> <li>+ Tracking_loop_filter()</li> <li>+ operator=()</li> <li>+ get_noise_bandwidth()</li> <li>+ get_update_interval()</li> <li>+ get_include_last_integrator()</li> <li>+ get_order()</li> <li>+ set_noise_bandwidth()</li> <li>+ set_update_interval()</li> <li>+ set_include_last_integrator()</li> <li>+ set_order()</li> <li>+ initialize()</li> <li>+ apply()</li> </ul>

### 10.408.1 Detailed Description

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).  
Definition at line 42 of file [two\\_bit\\_cpx\\_file\\_signal\\_source.h](#).

### 10.408.2 Member Function Documentation

#### 10.408.2.1 [create\\_file\\_source\\_hook\(\)](#)

void TwoBitCpxFileSignalSource::create\_file\_source\_hook () [override], [protected], [virtual]  
Reimplemented from [FileSourceBase](#).

#### 10.408.2.2 [itemTypeToSize\(\)](#)

std::tuple< size\_t, bool > TwoBitCpxFileSignalSource::itemTypeToSize () [override], [protected], [virtual]  
Compute the item size, from the [item\\_type\(\)](#). Subclasses may constrain types that don't make.  
Reimplemented from [FileSourceBase](#).

#### 10.408.2.3 [packetsPerSample\(\)](#)

double TwoBitCpxFileSignalSource::packetsPerSample () const [override], [protected], [virtual]  
The number of (possibly unpacked) samples in a (raw) file sample (default=1)  
Reimplemented from [FileSourceBase](#).

#### 10.408.2.4 [pre\\_connect\\_hook\(\)](#)

void TwoBitCpxFileSignalSource::pre\_connect\_hook (gr::top\_block\_sptr top\_block) [override], [protected], [virtual]  
Reimplemented from [FileSourceBase](#).

#### 10.408.2.5 pre\_disconnect\_hook()

```
void TwoBitCpxFileSignalSource::pre_disconnect_hook (  
    gr::top_block_sptr top_block) [override], [protected], [virtual]
```

Reimplemented from [FileSourceBase](#).

#### 10.408.2.6 source()

```
gnss_shared_ptr< gr::block > TwoBitCpxFileSignalSource::source () const [override], [protected],  
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.

Reimplemented from [FileSourceBase](#).

The documentation for this class was generated from the following file:

- [two\\_bit\\_cpx\\_file\\_signal\\_source.h](#)

## 10.409 TwoBitPackedFileSignalSource Class Reference

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

```
#include <two_bit_packed_file_signal_source.h>
```

Inheritance diagram for TwoBitPackedFileSignalSource:

Collaboration diagram for TwoBitPackedFileSignalSource:

## 10.409.1 Detailed Description

Class that reads signals samples from a file and adapts it to a [SignalSourceInterface](#).

Definition at line 44 of file [two\\_bit\\_packed\\_file\\_signal\\_source.h](#).

## 10.409.2 Member Function Documentation

### 10.409.2.1 [create\\_file\\_source\\_hook\(\)](#)

void TwoBitPackedFileSignalSource::create\_file\_source\_hook () [override], [protected], [virtual]  
Reimplemented from [FileSourceBase](#).

### 10.409.2.2 [itemTypeToSize\(\)](#)

std::tuple< size\_t, bool > TwoBitPackedFileSignalSource::itemTypeToSize () [override], [protected], [virtual]

Compute the item size, from the [item\\_type\(\)](#). Subclasses may constrain types that don't make.

Reimplemented from [FileSourceBase](#).

### 10.409.2.3 [packetsPerSample\(\)](#)

double TwoBitPackedFileSignalSource::packetsPerSample () const [override], [protected], [virtual]

The number of (possibly unpacked) samples in a (raw) file sample (default=1)

Reimplemented from [FileSourceBase](#).

### 10.409.2.4 [pre\\_connect\\_hook\(\)](#)

void TwoBitPackedFileSignalSource::pre\_connect\_hook (gr::top\_block\_sptr top\_block) [override], [protected], [virtual]

Reimplemented from [FileSourceBase](#).

#### 10.409.2.5 pre\_disconnect\_hook()

```
void TwoBitPackedFileSignalSource::pre_disconnect_hook (  
    gr::top_block_sptr top_block) [override], [protected], [virtual]
```

Reimplemented from [FileSourceBase](#).

#### 10.409.2.6 source()

```
gnss_shared_ptr< gr::block > TwoBitPackedFileSignalSource::source () const [override], [protected],  
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.

Reimplemented from [FileSourceBase](#).

The documentation for this class was generated from the following file:

- [two\\_bit\\_packed\\_file\\_signal\\_source.h](#)

## 10.410 UhdSignalSource Class Reference

This class reads samples from a UHD device (see <http://code.ettus.com/redmine/ettus/projects/uhd/wiki>)  
`#include <uhd_signal_source.h>`

Inheritance diagram for UhdSignalSource:

Collaboration diagram for UhdSignalSource:

#### 10.410.1 Detailed Description

This class reads samples from a UHD device (see <http://code.ettus.com/redmine/ettus/projects/uhd/wiki>)  
Definition at line 41 of file [uhd\\_signal\\_source.h](#).

#### 10.410.2 Member Function Documentation

##### 10.410.2.1 connect()

```
void UhdSignalSource::connect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

##### 10.410.2.2 disconnect()

```
void UhdSignalSource::disconnect (
    gr::top_block_sptr top_block) [override], [virtual]
```

Implements [GNSSBlockInterface](#).

##### 10.410.2.3 get\_left\_block()

```
gr::basic_block_sptr UhdSignalSource::get_left_block () [override], [virtual]
```

Reimplemented from [SignalSourceBase](#).

##### 10.410.2.4 get\_right\_block() [1/2]

```
gr::basic_block_sptr UhdSignalSource::get_right_block () [override], [virtual]
```

Implements [GNSSBlockInterface](#).

##### 10.410.2.5 get\_right\_block() [2/2]

```
gr::basic_block_sptr UhdSignalSource::get_right_block (
    int RF_channel) [override], [virtual]
```

Reimplemented from [GNSSBlockInterface](#).

### 10.410.2.6 item\_size()

size\_t UhdSignalSource::item\_size () [inline], [override], [virtual]

Implements [GNSSBlockInterface](#).

Definition at line 50 of file [uhd\\_signal\\_source.h](#).

The documentation for this class was generated from the following file:

- [uhd\\_signal\\_source.h](#)

## 10.411 unpack\_2bit\_samples Class Reference

This class takes 2 bit samples that have been packed into bytes or shorts as input and generates a byte for each sample. It generates eight times as much data as is input (every two bits become 16 bits)

#include <unpack\_2bit\_samples.h>

Inheritance diagram for unpack\_2bit\_samples:

Collaboration diagram for `unpack_2bit_samples`:

### Public Member Functions

- **unpack\_2bit\_samples** (bool big\_endian\_bytes, size\_t item\_size, bool big\_endian\_items, bool reverse\_interleaving)

## 10.423 Viterbi\_Decoder Class Reference

Class that implements a Viterbi decoder.

```
#include <viterbi_decoder.h>
```

Collaboration diagram for Viterbi\_Decoder:

### Public Member Functions

- [Viterbi\\_Decoder](#) (int32\_t *KK*, int32\_t *nn*, int32\_t *LL*, const std::array< int32\_t, 2 > &*g*)  
*Constructor of a Viterbi decoder.*
- void [decode](#) (std::vector< int32\_t > &output\_u\_int, const std::vector< float > &input\_c)  
*Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.*
- void [reset](#) ()  
*Reset internal status.*

### 10.423.1 Detailed Description

Class that implements a Viterbi decoder.

Definition at line 34 of file [viterbi\\_decoder.h](#).

### 10.423.2 Constructor & Destructor Documentation

#### 10.423.2.1 Viterbi\_Decoder()

```
Viterbi_Decoder::Viterbi_Decoder (
    int32_t KK,
    int32_t nn,
    int32_t LL,
    const std::array< int32_t, 2 > & g)
```

Constructor of a Viterbi decoder.

#### Parameters

in	<i>KK</i>	Constraint length
in	<i>nn</i>	Coding rate 1/n
in	<i>LL</i>	Data length
in	<i>g</i>	Polynomial G1 and G2

### 10.423.3 Member Function Documentation

#### 10.423.3.1 decode()

```
void Viterbi_Decoder::decode (
    std::vector< int32_t > & output_u_int,
    const std::vector< float > & input_c)
```

Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.

## Parameters

out	output_u_int	Hard decisions on the data bits
in	input_c	The received signal in LLR-form. For BPSK, must be in form $r = 2*a*y/(\sigma^2)$ .

**10.423.3.2 reset()**

```
void Viterbi_Decoder::reset ()
```

Reset internal status.

The documentation for this class was generated from the following file:

- [viterbi\\_decoder.h](#)

**10.424 Viterbi\_Decoder\_Sbas Class Reference**

Class that implements a Viterbi decoder.

```
#include <viterbi_decoder_sbas.h>
```

Collaboration diagram for Viterbi\_Decoder\_Sbas:

**Public Member Functions**

- **Viterbi\_Decoder\_Sbas** (const int g\_encoder[], int KK, int nn)
- void **reset** ()
- float **decode\_block** (const double input\_c[], int \*output\_u\_int, int LL)  
*Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.*
- float **decode\_continuous** (const double sym[], int traceback\_depth, int bits[], int nbits\_requested, int &nbits\_decoded)

**10.424.1 Detailed Description**

Class that implements a Viterbi decoder.

Definition at line 34 of file [viterbi\\_decoder\\_sbas.h](#).

**10.424.2 Member Function Documentation****10.424.2.1 decode\_block()**

```
float Viterbi_Decoder_Sbas::decode_block (
    const double input_c[],
```

```
int * output_u_int,  
int LL)
```

Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.

#### Parameters

in	<i>input_c[]</i>	The received signal in LLR-form. For BPSK, must be in form $r = 2*a*y/(sigma^2)$ .
in	<i>LL</i>	The number of data bits to be decoded (does not include the mm zero-tail-bits)

#### Returns

output\_u\_int[] Hard decisions on the data bits (without the mm zero-tail-bits)

The documentation for this class was generated from the following file:

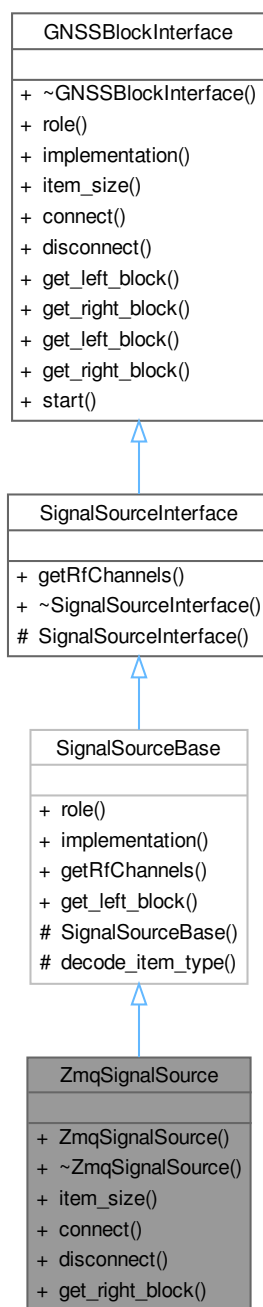

- [viterbi\\_decoder\\_sbass.h](#)

## 10.425 ZmqSignalSource Class Reference

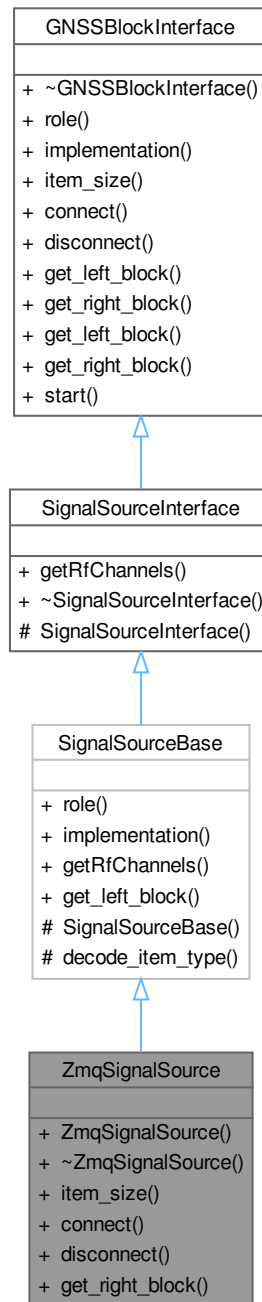

This class supports the following properties:

```
#include <zmq_signal_source.h>
```

Inheritance diagram for ZmqSignalSource:

Collaboration diagram for ZmqSignalSource:

### Public Member Functions

- **ZmqSignalSource** (const [ConfigurationInterface](#) \*configuration, const std::string &role, unsigned int in\_stream, unsigned int out\_stream, [Concurrent\\_Queue](#)< pmt::pmt\_t > \*queue)
- `size_t item_size ()` override
- auto `connect (gr::top_block_sptr top_block) -> void` override
- auto `disconnect (gr::top_block_sptr top_block) -> void` override
- auto `get_right_block () -> gr::basic_block_sptr` override

## Public Member Functions inherited from [SignalSourceBase](#)

- `std::string role ()` final
- `std::string implementation ()` final
- `size_t getRfChannels ()` const override
- `gr::basic_block_sptr get_left_block ()` override

## Public Member Functions inherited from [GNSSBlockInterface](#)

- virtual `gr::basic_block_sptr get_left_block (int RF_channel)`
- virtual `gr::basic_block_sptr get_right_block (int RF_channel)`
- virtual void `start ()`

*Start the flow of samples if needed.*

## Additional Inherited Members

## Protected Member Functions inherited from [SignalSourceBase](#)

- [SignalSourceBase](#) ([ConfigurationInterface](#) const \*configuration, std::string role, std::string impl)  
*Constructor.*
- `size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_↔ error=false)`  
*utility for decoding passed ".item\_type" values*

### 10.425.1 Detailed Description

This class supports the following properties:

`.endpoint` - the ZMQ endpoint to be connected to  
`.vlen` - vector length of the input items (default 1, one item) this must match the size of the publisher!  
`.pass_tags` - boolean flag if tags should be propagated (default false)  
`.timeout_ms` - receive timeout, in milliseconds (default 100)  
`.hwm` - ZMQ high water mark (default -1, ZMQ default)  
`.item_type` - data type of the samples (default "gr\_complex")  
 (probably should be abstracted to the base class)  
`.dump` - whether to archive input data  
`.dump_filename` - if dumping, path to file for output  
 Definition at line 51 of file [zmq\\_signal\\_source.h](#).

### 10.425.2 Member Function Documentation

#### 10.425.2.1 connect()

```
auto ZmqSignalSource::connect (
    gr::top_block_sptr top_block) -> void [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.425.2.2 disconnect()

```
auto ZmqSignalSource::disconnect (
    gr::top_block_sptr top_block) -> void [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.425.2.3 get\_right\_block()

```
auto ZmqSignalSource::get_right_block () -> gr::basic_block_sptr [override], [virtual]
```

Implements [GNSSBlockInterface](#).

#### 10.425.2.4 item\_size()

`size_t ZmqSignalSource::item_size () [override], [virtual]`

Implements [GNSSBlockInterface](#).

The documentation for this class was generated from the following file:

- [zmq\\_signal\\_source.h](#)

- using [pcps\\_assisted\\_acquisition\\_cc\\_sptr](#) = gnss\_shared\_ptr<[pcps\\_assisted\\_acquisition\\_cc](#)>

## Functions

- [pcps\\_assisted\\_acquisition\\_cc\\_sptr pcps\\_make\\_assisted\\_acquisition\\_cc](#) (int32\_t max\_dwells, uint32\_t sampled\_ms, int32\_t doppler\_max, int32\_t doppler\_min, int64\_t fs\_in, int32\_t samples\_per\_ms, bool dump, const std::string &dump\_filename, bool enable\_monitor\_output)

### 11.65.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with assistance and multi-dwells. Acquisition strategy (Kay Borre book + CFAR threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message queue

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

### 11.69.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition using OpenCL to offload some functions to the GPU.

Acquisition strategy (Kay Borre book + CFAR threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message port

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

### 11.71.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with the QuickSync Algorithm. Acquisition strategy (Kay Borre book CFAR + threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform folding of the incoming signal and local generated code
4. Perform the FFT-based circular convolution (parallel time search)
5. Record the maximum peak and the associated synchronization parameters
6. Compute the test statistics and compare to the threshold
7. Declare positive or negative acquisition using a message port
8. Obtain the adequate acquisition parameters by correlating the incoming signal shifted by the possible folded delays

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkha user, 2007. pp 81-84

### 11.73.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with Tong algorithm.

**Author**

Marc Molina, 2013. marc.molina.pena(at)gmail.com

Acquisition strategy (Kaplan book + CFAR threshold).

1. Compute the input signal power estimation.
2. Doppler serial search loop.

3. Perform the FFT-based circular convolution (parallel time search).
4. Compute the tests statistics for all the cells.
5. Accumulate the grid of tests statistics with the previous grids.
6. Record the maximum peak and the associated synchronization parameters.
7. Compare the maximum averaged test statistics with a threshold.
8. If the test statistics exceeds the threshold, increment the Tong counter.
9. Otherwise, decrement the Tong counter.
10. If the Tong counter is equal to a given maximum value, declare positive
11. acquisition. If the Tong counter is equa to zero, declare negative
12. acquisition. Otherwise, process the next block.

### 11.157.1 Detailed Description

A set of coordinate transformations functions and helpers, some of them migrated from MATLAB, for geographic information systems.

## 11.174 gnss\_sdr\_string\_literals.h File Reference

This file implements the `""s` operator for `std::string` in C++11, and puts it into the `std::string_literals` namespace. This is already implemented in C++14, so this is only compiled when using C++11. The `.cc` file is required for avoiding the duplication of symbols.

### 11.174.1 Detailed Description

This file implements the `""s` operator for `std::string` in C++11, and puts it into the `std::string_literals` namespace. This is already implemented in C++14, so this is only compiled when using C++11. The `.cc` file is required for avoiding the duplication of symbols.

## 11.208.2 Macro Definition Documentation

### 11.208.2.1 MIN\_PPP

```
#define MIN_PPP(  
    x,  
    y)
```

#### Value:

```
((x) <= (y) ? (x) : (y))
```

Definition at line 40 of file [rtklib\\_ppp.h](#).

### 11.208.2.2 ROUND\_PPP

```
#define ROUND_PPP(  
    x)
```

#### Value:

```
static_cast<int>(floor((x) + 0.5))
```

Definition at line 41 of file [rtklib\\_ppp.h](#).

### 11.208.2.3 SWAP\_D

```
#define SWAP_D(  
    x,  
    y)
```

#### Value:

```
do  
{  
    double _z = x;  
    x = y;  
    y = _z;  
}  
while (0)
```

Definition at line 51 of file [rtklib\\_ppp.h](#).

### 11.208.2.4 SWAP\_I

```
#define SWAP_I(  
    x,  
    y)
```

#### Value:

```
do  
{  
    int _z = x;  
    x = y;  
    y = _z;  
}  
while (0)
```

Definition at line 43 of file [rtklib\\_ppp.h](#).

## 11.208.3 Variable Documentation

### 11.208.3.1 CONST\_AMB

```
const double CONST_AMB = 0.001
```

Definition at line 61 of file [rtklib\\_ppp.h](#).

### 11.208.3.2 LOG\_PI

```
const double LOG_PI = 1.14472988584940017
```

Definition at line 63 of file [rtklib\\_ppp.h](#).

### 11.208.3.3 MIN\_ARC\_GAP

```
const double MIN_ARC_GAP = 300.0
```

Definition at line 60 of file [rtklib\\_ppp.h](#).

### 11.208.3.4 SQRT2

```
const double SQRT2 = 1.41421356237309510
```

Definition at line 64 of file [rtklib\\_ppp.h](#).

### 11.208.3.5 THRES\_RES

```
const double THRES_RES = 0.3
```

Definition at line 62 of file [rtklib\\_ppp.h](#).

**11.208.3.6 VAR\_BIAS**

```
const double VAR_BIAS = std::pow(100.0, 2.0)
```

Definition at line 70 of file [rtklib\\_ppp.h](#).

**11.208.3.7 VAR\_CLK**

```
const double VAR_CLK = std::pow(100.0, 2.0)
```

Definition at line 67 of file [rtklib\\_ppp.h](#).

**11.208.3.8 VAR\_GRA\_PPP**

```
const double VAR_GRA_PPP = std::pow(0.001, 2.0)
```

Definition at line 69 of file [rtklib\\_ppp.h](#).

**11.208.3.9 VAR\_IONO\_OFF**

```
const double VAR_IONO_OFF = std::pow(10.0, 2.0)
```

Definition at line 72 of file [rtklib\\_ppp.h](#).

**11.208.3.10 VAR\_POS\_PPP**

```
const double VAR_POS_PPP = std::pow(100.0, 2.0)
```

Definition at line 66 of file [rtklib\\_ppp.h](#).

**11.208.3.11 VAR\_ZTD**

```
const double VAR_ZTD = std::pow(0.3, 2.0)
```

Definition at line 68 of file [rtklib\\_ppp.h](#).

**11.209 rtklib\_ppp.h**

### 11.216.2 Variable Documentation

#### 11.216.2.1 CODES\_BDS

```
const int CODES_BDS[]
```

##### Initial value:

```
= {
    CODE_L1I, CODE_L1Q, CODE_L1X, CODE_L7I, CODE_L7Q, CODE_L7X, CODE_L6I, CODE_L6Q,
    CODE_L6X}
```

Definition at line 73 of file [rtklib\\_rtc3.h](#).

#### 11.216.2.2 CODES\_GAL

```
const int CODES_GAL[]
```

##### Initial value:

```
= {
    CODE_L1A, CODE_L1B, CODE_L1C, CODE_L1X, CODE_L1Z, CODE_L5I, CODE_L5Q, CODE_L5X,
    CODE_L7I, CODE_L7Q, CODE_L7X, CODE_L8I, CODE_L8Q, CODE_L8X, CODE_L6A, CODE_L6B,
    CODE_L6C, CODE_L6X, CODE_L6Z}
```

Definition at line 62 of file [rtklib\\_rtc3.h](#).

#### 11.216.2.3 CODES\_GLO

```
const int CODES_GLO[]
```

##### Initial value:

```
= {
    CODE_L1C, CODE_L1P, CODE_L2C, CODE_L2P}
```

Definition at line 58 of file [rtklib\\_rtc3.h](#).

**11.216.2.4 CODES\_GPS**

```
const int CODES_GPS[]
```

**Initial value:**

```
= {
    CODE_L1C, CODE_L1P, CODE_L1W, CODE_L1Y, CODE_L1M, CODE_L2C, CODE_L2D, CODE_L2S,
    CODE_L2L, CODE_L2X, CODE_L2P, CODE_L2W, CODE_L2Y, CODE_L2M, CODE_L5I, CODE_L5Q,
    CODE_L5X}
```

Definition at line 52 of file [rtklib\\_rtc3.h](#).**11.216.2.5 CODES\_QZS**

```
const int CODES_QZS[]
```

**Initial value:**

```
= {
    CODE_L1C, CODE_L1S, CODE_L1L, CODE_L2S, CODE_L2L, CODE_L2X, CODE_L5I, CODE_L5Q,
    CODE_L5X, CODE_L6S, CODE_L6L, CODE_L6X, CODE_L1X}
```

Definition at line 68 of file [rtklib\\_rtc3.h](#).**11.216.2.6 CODES\_SBS**

```
const int CODES_SBS[]
```

**Initial value:**

```
= {
    CODE_L1C, CODE_L5I, CODE_L5Q, CODE_L5X}
```

Definition at line 78 of file [rtklib\\_rtc3.h](#).**11.216.2.7 PRUNIT\_GLO**

```

## 11.218.2 Macro Definition Documentation

### 11.218.2.1 Rx

```
#define Rx(
```

```
    t,  
    X)
```

Value:

```
do  
{  
    (X)[0] = 1.0;  
    (X)[1] = (X)[2] = (X)[3] = (X)[6] = 0.0;  
    (X)[4] = (X)[8] = cos(t);  
    (X)[7] = sin(t);  
    (X)[5] = -(X)[7];  
}  
while (0)
```

Definition at line 85 of file [rtklib\\_rtkcmn.h](#).

### 11.218.2.2 Ry

```
#define Ry(
```

```
    t,  
    X)
```

Value:

```
do  
{  
    (X)[4] = 1.0;  
    (X)[1] = (X)[3] = (X)[5] = (X)[7] = 0.0;  
    (X)[0] = (X)[8] = cos(t);  
    (X)[2] = sin(t);  
    (X)[6] = -(X)[2];  
}  

```

```
while (0)
```

Definition at line 96 of file [rtklib\\_rtkcmn.h](#).

### 11.218.2.3 Rz

```
#define Rz(
```

```
    t,  
    X)
```

Value:

```
do  
{  
    (X)[8] = 1.0;  
    (X)[2] = (X)[5] = (X)[6] = (X)[7] = 0.0;  
    (X)[0] = (X)[4] = cos(t);  
    (X)[3] = sin(t);  
    (X)[1] = -(X)[3];  
}  
while (0)
```

Definition at line 107 of file [rtklib\\_rtkcmn.h](#).

```

Definition at line 58 of file [rtklib\\_stream.h](#).

#### 11.228.2.2 FTP\_TIMEOUT

```
#define FTP_TIMEOUT 30 /* ftp/http timeout (s) */
```

Definition at line 59 of file [rtklib\\_stream.h](#).

#### 11.228.2.3 MAXCLI

```
#define MAXCLI 32 /* max client connection for tcp svr */
```

Definition at line 42 of file [rtklib\\_stream.h](#).

#### 11.228.2.4 MAXSTATMSG

```
#define MAXSTATMSG 32 /* max length of status message */
```

Definition at line 43 of file [rtklib\\_stream.h](#).

#### 11.228.2.5 NTRIP\_AGENT

```
#define NTRIP_AGENT "RTKLIB/" VER_RTKLIB
```

Definition at line 46 of file [rtklib\\_stream.h](#).

#### 11.228.2.6 NTRIP\_CLI\_PORT

```
#define NTRIP_CLI_PORT 2101 /* default ntrip-client connection port */
```

Definition at line 47 of file [rtklib\\_stream.h](#).

#### 11.228.2.7 NTRIP\_MAXRSP

```
#define NTRIP_MAXRSP 32768 /* max size of ntrip response */
```

Definition at line 49 of file [rtklib\\_stream.h](#).

#### 11.228.2.8 NTRIP\_MAXSTR

```
#define NTRIP_MAXSTR 256 /* max length of mountpoint string */
```

Definition at line 50 of file [rtklib\\_stream.h](#).

### 11.228.2.9 NTRIP\_RSP\_ERROR

```
#define NTRIP_RSP_ERROR "ERROR" /* ntrip response: error */
```

Definition at line 56 of file [rtklib\\_stream.h](#).

### 11.228.2.10 NTRIP\_RSP\_HTTP

```
#define NTRIP_RSP_HTTP "HTTP/" /* ntrip response: http */
```

Definition at line 55 of file [rtklib\\_stream.h](#).

### 11.228.2.11 NTRIP\_RSP\_OK\_CLI

```
#define NTRIP_RSP_OK_CLI "ICY 200 OK\r\n" /* ntrip response: client */
```

Definition at line 51 of file [rtklib\\_stream.h](#).

### 11.228.2.12 NTRIP\_RSP\_OK\_SVR

```
#define NTRIP_RSP_OK_SVR "OK\r\n" /* ntrip response: server */
```

Definition at line 52 of file [rtklib\\_stream.h](#).

### 11.228.2.13 NTRIP\_RSP\_SRCTBL

```
#define NTRIP_RSP_SRCTBL "SOURCETABLE 200 OK\r\n" /* ntrip response: source table */
```

Definition at line 53 of file [rtklib\\_stream.h](#).

### 11.228.2.14 NTRIP\_RSP\_TBLEND

```
#define NTRIP_RSP_TBLEND "ENDSOURCETABLE"
```

Definition at line 54 of file [rtklib\\_stream.h](#).

### 11.228.2.15 NTRIP\_SVR\_PORT

```
#define NTRIP_SVR_PORT 80 /* default ntrip-server connection port */
```

Definition at line 48 of file [rtklib\\_stream.h](#).

### 11.228.2.16 SERIBUFFSIZE

```
#define SERIBUFFSIZE 4096 /* serial buffer size (bytes) */
```

Definition at line 40 of file [rtklib\\_stream.h](#).

### 11.228.2.17 TIMETAGH\_LEN

```
#define TIMETAGH_LEN 64 /* time tag file header length */
```

Definition at line 41 of file [rtklib\\_stream.h](#).

### 11.228.2.18 TINTACT

```
#define TINTACT 200 /* period for stream active (ms) */
```

Definition at line 39 of file [rtklib\\_stream.h](#).

### 11.228.2.19 VER\_RTKLIB

```
#define VER_RTKLIB "2.4.2"
```

Definition at line 45 of file [rtklib\\_stream.h](#).

00047  *
00048  * Global configuration options used:
00049  *
00050  * GNSS-SDR.pre_2009_file - flag indicating a file older than 2009 rollover should be processed
00051  * GNSS-SDR.observable_interval_ms - (20)
00052  *
00053  * It supports the following configuration options:
00054  *
00055  * .dump - (false)
00056  * .dump_filename - (".pvt.dat")
00057  * .dump_mat - (true)
00058  * .rtk_trace_level - debug level for the RTKLIB methods (0)
00059  *
00060  * .output_rate_ms - (500)
00061  * Note that the actual rate is the least common multiple of this value and
00062  * GNSS-SDR.observable_interval_ms
00063  *
00064  * .display_rate_ms - (500)
00065  *
00066  * .flag_nmea_tty_port - (false)
00067  * .nmea_dump_filename - (".nmea_pvt.nmea")
00068  * .nmea_dump_devname - ("/dev/tty1")
00069  *
00070  * .rinex_version - (3) overridden by -RINEX_version=n.nn command line argument
00071  * .rinexobs_rate_ms - rate at which RINEX observations are written (1000). Note that
00072  * the actual rate is the least common multiple of this value and
00073  * .output_rate_ms
00074  * .rinex_name - (-RINEX_name command-line argument)
00075  *
00076  * .flag_rtcmm_tty_port - (false)
00077  * .rtcmm_dump_devname - ("/dev/pts/1")
00078  * .flag_rtcmm_server - (false)
00079  * .rtcmm_tcp_port - (2101)
00080  * .rtcmm_station_id - (1234)
00081  * Output rates ... all values are LCM with the computed output rate (above)
00082  * .rtcmm_MT1019_rate_ms - (5000)
00083  * .rtcmm_MT1020_rate_ms - (5000)
00084  * .rtcmm_MT1045_rate_ms - (5000)
00085  * .rtcmm_MSM_rate_ms - (1000)
00086  * .rtcmm_MT1077_rate_ms - (.rtcmm_MSM_rate_ms)
00087  * .rtcmm_MT1087_rate_ms - (.rtcmm_MSM_rate_ms)
00088  * .rtcmm_MT1097_rate_ms - (.rtcmm_MSM_rate_ms)
00089  *
00090  * .kml_rate_ms - (1000)

```

```

00089 * .gpx_rate_ms - (1000)
00090 * .geojson_rate_ms - (1000)
00091 * .nmea_rate_ms - (1000)
00092 *
00093 * .positioning_mode - The RTKLIB positioning mode. ("Single") Supported values are "Single",
00094 * "Static", "Kinematic", "PPP_Static" and "PPP_Kinematic". Unsupported modes
00095 * include DGPS/DGNSS, Moving Baseline, Fixed, and PPP-fixed
00096 * .num_bands - number of frequencies to use, between 1 and 3. Default is based on the channels
configured
00097 * .elevation_mask - (15.0). Value must be in the range [0,90.0]
00098 * .dynamics_model - (0) 0:none, 1:velocity, 2:acceleration
00099
00100 * .iono_model - ("OFF"). Supported values are "OFF", "Broadcast", "SBAS", "Iono-Free-LC",
00101 * "Estimate_STEC", "IONEX". Unsupported values include QZSS broadcast, QZSS
00102 * LEX, and SLANT TEC.
00103 * .trop_model - ("OFF"). Supported values are "OFF", "Saastamoinen", "SBAS", "Estimate_ZTD", and
00104 * "Estimate_ZTD_Grad". Unsupported values include ZTD correction and ZTD+grad
00105 * correction
00106 * .phwindup - phase windup correction for PPP modes (0)
00107 * .reject_GPS_IIA - whether the GPS Block IIA satellites in eclipse are excluded (0). Only applies
in PPP-* modes
00108 * .raim_fde - whether RAIM (receiver autonomous integrity monitoring) FDE (fault detection and
exclusion) is enabled (0)
00109 * .earth_tide - (0)
00110 * .navigation_system - mask of navigation systems to use. Default based on configured channels
00111 * 0x01:GPS, 0x02:SBAS, 0x04:GLONASS, 0x08:Galileo, 0x10:QZSS, 0x20:BeiDou,
00112 * 0x40:IRNS, 0x80:LEO
00113 *
00114 * .AR_GPS - Ambiguity Resolution mode for GPS ("Continuous"). Supported values are "OFF",
00115 * "Continuous", "Instantaneous", "Fix-and-Hold", "PPP-AR". Unsupported values
00116 * include PPP-AR ILS, WLNL, and TCAR.
00117 * .AR_GLO - Ambiguity Resolution mode for GLONASS (1). Value must be in the range [0,3].
(0:off,1:on,2:auto cal,3:ext cal)
00118 * .AR_DBS - Ambiguity Resolution Mode for BeiDou (1). Value must be in the range [0,1]. (0:off,1:on)
00119 * .min_ratio_to_fix_ambiguity - (3.0)
00120 * .min_lock_to_fix_ambiguity - (0)
00121 * .min_elevation_to_fix_ambiguity - minimum elevation (deg) to fix integer ambiguity (0.0)
00122 * .outage_reset_ambiguity - (5)
00123 * .slip_threshold - (0.05)
00124 * .threshold_reject_gdop - if GDOP is over this value, the observable is excluded (30.0)
00125 * .threshold_reject_innovation - if innovation is over this value, the observable is excluded (30.0)
00126 * .number_filter_iter - number of iterations for the estimation filter (1)
00127 * .bias_0 - (30.0)
00128 * .iono_0 - (0.03)
00129 * .trop_0 - (0.3)
00130 * .sigma_bias - process noise stddev of carrier-phase bias(ambiguity) (cycle/sqrt(s)) (1e-4)
00131 * .sigma_iono - process noise stddev of vertical ionospheric delay per 10km baseline (m/sqrt(s))
(1e-3)
00132 * .sigma_trop - process noise stddev of zenith tropospheric delay (m/sqrt(s)) (1e-4)
00133 * .sigma_acch - process noise stddev of the receiver acceleration horizontal component
(m/s2/sqrt(s)) (1e-1)
00134 * .sigma_accv - process noise stddev of the receiver acceleration vertical component (m/s2/sqrt(s))
(1e-2)
00135 * .sigma_pos - (0.0)
00136 * .code_phase_error_ratio_l1 - (100.0)
00137 * .code_phase_error_ratio_l2 - (100.0)
00138 * .code_phase_error_ratio_l5 - (100.0)
00139 * .carrier_phase_error_factor_a - (0.003)
00140 * .carrier_phase_error_factor_b - (0.003)
00141 *
00142 * .output_enabled - (true)
00143 * .rinex_output_enabled - (.output_enabled)
00144 * .gpx_output_enabled - (.output_enabled)
00145 * .geojson_output_enabled - (.output_enabled)
00146 * .kml_output_enabled - (.output_enabled)

### Functions

- std::string [asString](#) (long double x, std::string::size\_type precision)
- int64\_t [asInt](#) (const std::string &s)

### 11.272.1 Detailed Description

Interface of a RINEX 2.11 / 3.01 printer See <ftp://igs.org/pub/data/format/rinex301.pdf>.

Receiver Independent EXchange Format (RINEX): The first proposal for the Receiver Independent Exchange Format RINEX was developed by the Astronomical Institute of the University of Berne for the easy exchange of the GPS data to be collected during the large European GPS campaign EUREF 89, which involved more than 60 GPS receivers of 4 different manufacturers. The governing aspect during the development was the fact that most geodetic processing software for GPS data use a well-defined set of observables: 1) The carrier-phase measurement at one or both carriers (actually being a measurement on the beat frequency between the received carrier of the satellite signal and a receiver-generated reference frequency). 2) The pseudorange (code) measurement, equivalent to the difference of the time of reception (expressed in the time frame of the receiver) and the time of transmission (expressed in the time frame of the satellite) of a distinct satellite signal. 3) The observation time being the reading of the receiver clock at the instant of validity of the carrier-phase and/or the code measurements. Note: A collection of the formats currently used by the IGS can be found here: <https://kb.igs.org/hc/en-us/articles/201096516-IGS-Formats>

00069  * \brief This class implements the generation and reading of some Message Types
00070  * defined in the RTCM 3.2 Standard, plus some utilities to handle messages.
00071  *
00072  * Generation of the following Message Types:
00073  * 1001, 1002, 1003, 1004, 1005, 1006, 1008, 1019, 1020, 1029, 1045
00074  *
00075  * Decoding of the following Message Types:
00076  * 1019, 1045
00077  *
00078  * Generation of the following Multiple Signal Messages:
00079  * MSM1 (message types 1071, 1091)
00080  * MSM2 (message types 1072, 1092)
00081  * MSM3 (message types 1073, 1093)
00082  * MSM4 (message types 1074, 1094)
00083  * MSM5 (message types 1075, 1095)
00084  * MSM6 (message types 1076, 1096)
00085  * MSM7 (message types 1077, 1097)
00086  *
00087  * RTCM 3 message format (size in bits):
00088  * +-----+-----+-----+-----+-----+
00089  * | preamble | 000000 | length | data message | parity |
00090  * +-----+-----+-----+-----+-----+
00091  * |<-- 8 --->|<-- 6 --->|<-- 10 --->|<-- length x 8 --->|<-- 24 --->|
00092  * +-----+-----+-----+-----+-----+
00093  *
00094  *

## 11.298.2 Typedef Documentation

### 11.298.2.1 signal\_generator\_c\_sptr

`using signal_generator_c_sptr = gnss_shared_ptr<signal\_generator\_c>`  
Definition at line 29 of file [signal\\_generator\\_c.h](#).

## 11.298.3 Function Documentation

### 11.298.3.1 signal\_make\_generator\_c()

```

signal_generator_c_sptr signal_make_generator_c (
    const std::vector< std::string > & signal1,
    const std::vector< std::string > & system,

```

```

const std::vector< unsigned int > & PRN,
const std::vector< float > & CNO_dB,
const std::vector< float > & doppler_Hz,
const std::vector< unsigned int > & delay_chips,
const std::vector< unsigned int > & delay_sec,
bool data_flag,
bool noise_flag,
unsigned int fs_in,
unsigned int vector_length,
float BW_BB)

```

Return a shared\_ptr to a new instance of gen\_source.

To avoid accidental use of raw pointers, gen\_source's constructor is private. signal\_make\_generator\_c is the public interface for creating new instances.

## Classes

- class [MultichannelFileSignalSource](#)

*Class that reads signals samples from files at different frequency bands and adapts it to a [SignalSourceInterface](#).*

### 11.333.1 Detailed Description

Implementation of a class that reads signals samples from files at different frequency band and adapts it to a [SignalSourceInterface](#).

#### Author

Javier Arribas, 2019 jarribas(at)cttc.es

This class represents a file signal source. Internally it uses a GNU Radio's `gr_file_source` as a connector to the data.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

- using [b\\_io\\_context](#) = [boost::asio::io\\_service](#)

## Functions

- `rtl_tcp_signal_source_c_sptr rtl_tcp_make_signal_source_c` (const std::string &address, int16\_t port, bool flip\_iq=false)

### 11.369.1 Detailed Description

Interface of an `rtl_tcp` signal source reader.

#### Author

Anthony Arnold, 2015. [anthony.arnold\(at\)uqconnect.edu.au](mailto:anthony.arnold(at)uqconnect.edu.au)

The implementation of this block is a combination of various helpful sources. The data format and command structure is taken from the original Osmocom `rtl_tcp_source_f` (<https://git.osmocom.org/gr-osmosdr>). The asynchronous reading code comes from the examples provides by Boost.Asio and the bounded buffer producer-consumer solution is taken from the Boost.CircularBuffer examples (<https://www.boost.org/>). GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

## 11.371 unpack\_2bit\_samples.h File Reference

Unpacks 2 bit samples samples may be packed in any of the following ways: 1) Into bytes [ item == byte ] 1a) Big endian ordering within the byte 1b) Little endian ordering within the byte 2) Into shorts [ item == short ] 2a) Big endian ordering of bytes, big endian within the byte 2b) Big endian ordering of bytes, little endian within the byte 2c) Little endian ordering of bytes, big endian within the byte 2d) Little endian ordering of bytes, little endian within the byte.

```
#include "gnss_block_interface.h"
#include <gnuradio/sync_interpolator.h>
#include <stdint>
#include <vector>
```

Include dependency graph for unpack\_2bit\_samples.h:

This graph shows which files directly or indirectly include this file:

## Classes

- class [unpack\\_2bit\\_samples](#)

*This class takes 2 bit samples that have been packed into bytes or shorts as input and generates a byte for each sample. It generates eight times as much data as is input (every two bits become 16 bits)*

## Typedefs

- using [unpack\\_2bit\\_samples\\_sptr](#) = `gnss_shared_ptr<unpack\_2bit\_samples>`

## Functions

- `unpack_2bit_samples_sptr make_unpack_2bit_samples (bool big_endian_bytes, size_t item_size, bool big_endian_items, bool reverse_interleaving=false)`

### 11.371.1 Detailed Description

Unpacks 2 bit samples samples may be packed in any of the following ways: 1) Into bytes [ item == byte ] 1a) Big endian ordering within the byte 1b) Little endian ordering within the byte 2) Into shorts [ item == short ] 2a) Big endian ordering of bytes, big endian within the byte 2b) Big endian ordering of bytes, little endian within the byte 2c) Little endian ordering of bytes, big endian within the byte 2d) Little endian ordering of bytes, little endian within the byte.

Within a byte the two possibilities look like this: 7 6 5 4 3 2 1 0 : Bit number  $x_{n,1}$   $x_{n,0}$   $x_{n+1,1}$   $x_{n+1,0}$   $x_{n+2,1}$   $x_{n+2,0}$   $x_{n+3,1}$   $x_{n+3,0}$  : Little endian  $x_{n+3,1}$   $x_{n+3,0}$   $x_{n+2,1}$   $x_{n+2,0}$   $x_{n+1,0}$   $x_{n+1,0}$   $x_{n,1}$   $x_{n,0}$  : Big Endian

For a short (uint16\_t) the bytes are either transmitted as follows:

1 0 : Byte number Byte\_n Byte\_n+1 : Little endian Byte\_n+1 Byte\_n : Bit endian

The two bit values are assumed to have the following mapping:

$x_1$   $x_0$  Value 0 0 +1 0 1 +3 1 0 -3 1 1 -1

Letting  $x$  denote the two's complement interpretation of  $x_1$   $x_0$ , then:

Value =  $2*x + 1$

We want to output the data in the order:

Value\_0, Value\_1, Value\_2, ..., Value\_n, Value\_n+1, Value\_n+2, ...
